

API Documentation

SentinelOne Api Documentation Version swagger.2_1.json

Get Accounts	28
Create Account	34
Get Account by ID	52
Update Account	58
Revert Policy	79
Reactivate Account	82
Expire an Account	84
Get Uninstall Password Metadata	88
Get Uninstall Password	90
Generate/Regenerate Uninstall Password	91
Revoke Uninstall Password	93
Export Accounts	94
Get Activities	95
Get Activity Types	99
Last activity as Syslog message	100
Export Activities	103
Broadcast Message	105

Connect to Network	117
Fetch Logs	129
Initiate Scan	141
Abort Scan	153
Disconnect from Network	165
Decommission	177
Uninstall	189
Restart	201
Shutdown	213
Approve Uninstall	225
Reject uninstall	237
Update Software	249
Reset Local Config	262
Set Persistent Configuration Overrides	275
Set External ID	287
Fetch Files	299
Move between Sites	301
Fetch Firewall Rules	313
Move to Console	325
Get Applications	338
Start Remote Shell	351
Can run Remote Shell	363
Terminate Remote Shell	376
Fetch Firewall Logs	388
Randomize UUID	400
Mark as up-to-date	412
Enable Network Discovery	424
Disable Network Discovery	436
Edit local upgrade/downgrade Site authorization	448
Reset Passphrases	460
Disable Agent	472
Enable Agent	484

Start Remote Profiling	496
Stop Remote Profiling	508
Approve Stateless Upgrades	520
Manage endpoint tags: add, remove, override	532
Clear Remote Shell	544
Get Agents	556
Count Agents	574
Get Passphrase	586
Export Agent Logs	599
Applications	599
Processes	601
Get local upgrade/downgrade Agent authorization	602
Export Agents	603
Enable Agent PNA for Hyperautomation	613
Disable PNA for Hyperautomation	626
Export Agents - Passphrases	638
Export Agents - Light	648
Get the endpoint tags that match the filters.	659
Endpoint tags count by Filters	663
List Access Tokens	665
Create Access Token	667
Delete Access Token	669
Get alerts	669
Update Threat Incident	679
Update Alert Analyst Verdict	683
Get a single NAC rule	687
Update NAC rule	689
Create or update NAC rule	692
Delete NAC rules	695
Get paginated NAC rules	698
Create presigned CSV upload URL	701
Import CSV file uploaded	704

Export NAC rules to CSV	707
Get rule change log	710
Get column metadata	712
Get CSV processing status	713
Get CSV export status	715
Download sample CSV file	717
Get NAC settings	718
Update NAC settings	720
Get all NAC labels	722
Get CVE data	724
Risks Data Export	729
Initiate scan	732
Get Application Inventory	734
Inventory Data Export	736
Get App Inventory Endpoints	737
Inventory Endpoints Data Export	741
Get Application CVEs	742
Application CVE Data Export	746
Get Aggregated Applications With Risk	747
Aggregated Application Risk Data Export	752
Get Applications With Risk	754
Application Risk Data Export	758
Get Endpoints For Vulnerable App	760
Risk Endpoint Data Export	765
Get Endpoint Apps	767
Update Application Management Settings	768
Get Application Management Settings	770
Export Applications	772
[DEPRECATED] Get Applications	774
[DEPRECATED] Get CVEs	778
All Policies OS Count	780
Get Available Packages	782

Has Policy	783
Get Parent Policies	785
Get Policies	786
Deactivate Policies	788
Policies OS Count	789
Create Policy	790
Update Policy	792
Policy Action	794
Reset Policy Retry Counter	796
Reorder Policies	797
Set Scope Inheriting	799
Validate Bucket	801
Get cloud funnel rule	803
Delete cloud funnel rule	805
Post onboarding cloud funnel	808
Validate Query	810
Create Estimator ID	813
Get estimate size of events	815
Get AWS assume role external ID.	816
Get cloud rogue resources	817
Export cloud rogue resources to csv (default) or json	820
Get Config Overrides	821
Create Config Override	825
Delete Config Overrides	830
Delete Config Override	832
Update Config Override	834
Get Rules	838
Create Rule	847
Delete Rules	857
Update Rule	861
Activate Rules	871
Disable Rules	875

Get Entity Mapping Options	879
Get Available Actions by Asset/Entity Type	880
Perform an Action on selected assets/entities	883
Fetch surface ids in case of select all with filters	884
Internal api only to notify action was triggered without actually performing it	885
[DEPRECATED] Create Query and Get QueryId	886
[DEPRECATED] Cancel Running Query	888
[DEPRECATED] Get Query Status	890
[DEPRECATED] Get Events	891
[DEPRECATED] Get Process State	896
[DEPRECATED] Get Events By Type	897
[DEPRECATED] Create a Power Query and Get QueryId	902
[DEPRECATED] Ping a Power Query if results haven't been retrieved	905
Download source process file	906
S1 RSS Feed	908
Get Default Reports	909
Get Default Report Tasks	912
Create Default Report Task	915
Update Default Report Task	917
Delete Default Reports	920
Delete Default Report Tasks	921
Download Default Report	923
Get Default Insight Reports	924
Get Device Rules	925
Create Device Control Rule	929
Delete Rules	934
Update Device Rule	937
Copy Rules	942
Move rules	945
Reorder Rules	949
Get Configuration	952
Update Configuration	954

Export Rules	957
Get Device Control Events	959
Enable/Disable Rules	963
Get all tags rules	966
Create new tag rule	969
Delete tag rules	973
Update tag rule	975
Check how many assets this tag rule matches	979
Import Exclusions	983
Get Exclusion Import Validation Report	986
Import Blocklist Items	986
Get Blocklist Import Validation Report	989
Get Exclusions	989
Create Exclusion	994
Update Exclusions	998
Delete Exclusions	1002
Get Blocklist	1005
Create Blocklist Item	1009
Update Blocklist Item	1012
Delete Blocklist Item	1016
Validate Exclusion Item	1019
Validate Blocklist Item	1021
Export Exclusions	1023
Export Blocklist	1025
Get Exclusions	1027
Delete Exclusions	1033
Create Unified Exclusion	1035
Update Exclusions	1037
Create Bulk Unified Exclusion	1038
Import Unified Exclusions	1040
Export Unified Exclusions	1042
Get Exclusion Actions	1045

Get Filters	1052
Save Filter	1061
Update Filter	1078
Delete Filter	1093
[DEPRECATED] Get Deep Visibility Filters	1095
[DEPRECATED] Save Deep Visibility Filter	1096
[DEPRECATED] Delete Deep Visibility Filter	1098
[DEPRECATED] Update Deep Visibility Filter	1099
Upload CSV file	1102
Get Filters	1104
Save Filter	1106
Filters with Metadata	1109
Update Filter	1111
Delete Filter	1113
Get Firewall Rules	1114
Create Firewall Rule	1119
Delete Rules	1126
Copy Rules	1130
Move Rules	1133
Set Location	1137
Reorder Rules	1141
Get Configuration	1144
Update Configuration	1146
Export Rules	1149
Import Rules	1151
Enable/Disable Rules	1153
Get Protocols	1156
Add Rule Tags	1158
Remove Rule Tags	1162
Get Tag Firewall Rules	1166
Update Firewall Rule	1171
Application Forensics	1178

Application Forensics - Detailed	1181
Application Connections	1185
Export Application	1187
Get Gateways	1188
Update Gateways	1194
Update Gateway	1199
Query the graph based on query builder filters	1203
Query the graph based on query builder filters	1205
Query the sub graph of an asset type and id	1208
Get Graph Query Builder Initial Metadata	1211
Get Graph Query Builder Initial Metadata	1212
Get Query Builder metadata For Requested Resource Types	1213
Auto Complete	1214
Auto Complete	1216
Tag Auto Complete	1218
Get all of the feature toggles for graph services.	1220
Get the available relations	1221
Get graph recent query list	1222
Get graph query list	1223
Save graph query	1225
Get graph query counts by type	1227
Update graph query	1228
Delete graph query	1231
Get Groups	1232
Create Group	1236
Regenerate Group Token	1252
Delete Group	1253
Update Group	1254
Get Group by ID	1270
Revert Policy	1271
Move Agents	1274
Update Ranks	1285

Get Site registration token by ID	1286
Hash Reputation verdict	1288
List all workflow executions	1289
Get a workflow execution by its ID	1291
Trigger a workflow that uses a manual trigger or a scheduled trigger	1293
Get workflow execution output	1294
List workflow versions	1296
List all workflows	1297
Activate a workflow version	1299
Deactivate The active workflow	1300
Export workflow	1302
Batch export workflows	1303
Import workflow	1303
Batch import workflows	1307
Import custom integration from OpenAPI/Swagger spec file	1308
Export custom integration	1310
Batch export custom custom integrations	1311
Import custom integration	1311
Batch import custom integrations	1314
Expression Breakdown	1316
Evaluate Expression	1318
Get Assessment Status	1321
Get Exposures	1324
Get Affected Objects	1327
Trigger Assessment	1333
Set Skipped Exposures	1336
Set Acknowledged Status	1339
Delete AD configuration	1341
Add complete AD configuration	1343
Get timezones	1347
Get AD domains	1348
Get available features	1349

Get AD configurations	1350
Get AD configuration features	1351
Replace AD Connector	1352
Check if IDR is enabled on endpoint	1354
Get Windows Unified Agents	1356
Get Cloudlink Configurations	1358
Get onboarding status	1359
Get Policy List	1360
Get Inheritance Status	1361
Activate Policy	1362
Get Identity Policy Details	1364
Delete Policies	1366
Detach Policy Inheritance	1367
Revert Policy Inheritance	1369
Deactivate Policies	1371
Get Policy Info for Agent	1373
Create Policy	1375
Update Policy	1378
Duplicate Policy	1381
Get Privileged Admins	1383
Get Service Accounts	1385
Get Domain Controllers	1386
Get Delegated Admins	1387
Categories and counts	1388
Counts per subcategory for categories	1389
Get inventory counts for menu items	1395
Export Cloud Tags to CSV or JSON	1402
Assets	1403

Account Policy	2678
Update Account Policy	2693

Global Policy	2722
Update Global Policy	2737
Get All Roles	2766
Get Specific Role Definition	2769
Update role	2773
Delete role	2776
Create new role	2779
Get template for new role	2782
Create new Destination profile.	2785
Get available Destination profiles	2787
Delete multiple Destination profiles by ID	2788
Delete Destination profile by ID	2791
Update existing Destination profile	2791
Get Destination profile by ID	2794
Set profile as default profile of the scope	2796
Get results sent to data exporter	2798
Schedule remote script for future run.	2800
Schedule forensics for future run.	2804
Delete multiple scheduled tasks by ID	2808
Get available Scheduled Tasks	2810
Update existing Scheduled task	2815
Start collection of Forensics artifacts according to specified profile	2818
Return result of collection task	2829
Returns collection file download pre-signed url	2833
Check if collection file exists for given storyline	2834
Get list of supported artifact types	2835
Get Collection profile by ID	2836
Update Collection profile by ID	2839
Delete Collection profiles	2842
Create new Collection profile	2846
Get list of available Collection profiles	2849
Run Remote Script	2852

Get Remote Scripts Tasks Status	2864
Get Script Results	2868
Get upload limit for Package	2870
Get script content	2870
Get Scripts	2872
Upload New Script	2876
Delete Scripts	2880
Update a Script	2884
Update a Script	2887
Get paginated pending executions	2891
Approve/decline pending execution	2896
Gets a guardrails configuration for a given scope	2899
Updates or inserts (if record does not exist) a guardrails configuration	2900
Deletes a specific guardrails configuration	2902
Check whether guardrail applies to an execution	2904
List saved searches	2906
Create or update saved searches	2908
Delete saved searches	2910
Create Cred Group	2912
Get Cred groups	2914
Delete Cred Group	2916
Add cred details	2918
Get Cred group details	2920
Delete Cred Group Detail	2922
Update Cred Group Details	2924
Get Service Users	2926
Create Service User	2929
Get Service User	2933
Update Service User	2936
Delete Service User	2940
Export Service Users	2942
Generate API Token for Service User	2942

Bulk Delete Service Users	2945
Get SSO Settings	2947
Set SSO Settings	2950
Get SSO Service Provider Certificate	2954
Download SSO Service Provider Certificate	2955
Test SSO Settings	2955
Get Notification Settings	2959
Set Notification Settings	2961
Clear Pending Emails	2966
Get SMTP Settings	2969
Set SMTP Settings	2970

Accounts

Get Accounts

GET /web/api/v2.1/accounts

Get the Accounts, and their data, that match the filter. This command gives the Account IDs, which other commands require. Accounts are created by a Global User or by SentinelOne. Each Account contains Sites, which can inherit assets and settings. Each Account has one or more SKUs, that you assign to the Sites. To have both Core and Complete Sites in an Account, the Account must have both SKUs.

Parameters

accountids	optional	List of Account IDs to search for. Example: "225494730938493804,225494730938493915".
accounttype	optional	Account type. Example: "Trial".
activelicenses	optional	Active licenses
billingmode	optional	Billing mode. Example: "subscription".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat	optional	Timestamp of Account creation. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
expiration	optional	Expiration. Example: "2018-02-27T04:49:26.257525Z".
features	optional	Filter the list of Accounts for those that support this feature. Example: "firewall-control".
ids	optional	A list of Account IDs. Example: "225494730938493804,225494730938493915".
isdefault	optional	Is default
limit	optional	Limit number of returned items (1-1000). Example: "10".
module	optional	Module. Example: "star,rso".
name	optional	Name. Example: "My Account".

name__contains	optional	Free-text filter by account name (supports multiple values)
query	optional	Full text search for fields: name. (Note: on single-Account Consoles, the Account name will not be matched)
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sku	optional	Sku. Example: "core".
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
state	optional	Account state. Example: "active".
states	optional	Filter by state, such as active or expired.
statesnin	optional	List of states to not filter
totallicenses	optional	Total licenses
updatedat	optional	Timestamp of last update. Example: "2018-02-27T04:49:26.257525Z".
usagetype	optional	Usage type. Example: "customer".

Response Messages

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Accounts - response - pagination table
data	Response data	false	see Get Accounts - response - data table
errors	Errors	false	array

Get Accounts - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Accounts - response - data

Name	Description	Required	Value
accountType	Account type	false	string
activeAgents	Total Agents in the Account	false	integer
agentsInCompleteSku	[DEPRECATED] Number of Agents connected to a Complete site	false	integer
agentsInControlSku	[DEPRECATED] Number of Agents connected to a Control site	false	integer
agentsInCoreSku	[DEPRECATED] Number of Agents connected to a Core site	false	integer
billingMode	Billing mode	false	enum
completeSites	[DEPRECATED] Number of Sites in suite Complete	false	integer
controlSites	[DEPRECATED] Number of Sites in suite Control	false	integer
coreSites	[DEPRECATED] Number of Sites in suite Core	false	integer
createdAt	Timestamp of Account creation	false	string
creator	The user that created the group	false	string
creatorId	The ID of the user that created the group	false	string
expiration	Expiration	false	string

externalId	ID of CRM external system	false	string
id	Account ID	false	string
irFields	Ir fields	false	see Get Accounts - response - irFields table
isDefault	Is default	false	boolean
licenses	The account licenses.	false	see Get Accounts - response - licenses table
makeSocDefaultUi	True if SOC is to be enabled by default	false	boolean
name	Name	false	string
numberOfSites	Total number of Sites in this Account	false	integer
promptFields	Prompt fields	false	see Get Accounts - response - promptFields table
salesforceId		false	string
skus	[DEPRECATED] The list of SKUs for the Account.	false	see Get Accounts - response - skus table
state	Account state	false	enum
totalComplete	[DEPRECATED] Total Number of Complete licenses	false	integer
totalControl	[DEPRECATED] Total Number of Control licenses	false	integer
totalCore	[DEPRECATED] Total Number of Core licenses	false	integer
totalLicenses	The total number of licenses on all Surfaces for all Bundles.	false	integer
unlimitedComplete	[DEPRECATED] True if Complete licenses count is unlimited	false	boolean
unlimitedControl	[DEPRECATED] True if Control licenses count is unlimited	false	boolean
unlimitedCore	[DEPRECATED] True if Core licenses count is unlimited	false	boolean
unlimitedExpiration	The Account does not expire	false	boolean
updatedAt	Timestamp of last update	false	string
usageType	Usage type	false	enum

Get Accounts - response - irFields

Name	Description	Required	Value
companyName	The customer's company name	true	string
contactEmail	Business email of the customer contact. Must not match the IR partner domain, the submitter's own domain, or a free/personal email provider (e.g. Gmail, Yahoo, Hotmail)	true	string
contactFirstName	First name of the customer contact	true	string
contactLastName	Last name of the customer contact	true	string
country	Country of the customer	true	string
industry	Industry vertical of the customer	true	enum
numberOfEmployeesEndpoints	Estimated number of employees or endpoints at the customer	true	integer
city	City of the customer	false	string
postal	Postal / ZIP code of the customer	false	string
region	State or region within the country	false	string

Get Accounts - response - licenses

Name	Description	Required	Value
bundles	The licenses Bundles	false	see Get Accounts - response - bundles table
modules	The licenses Add-ons	false	see Get Accounts - response - modules table
settings	The licenses Settings	false	see Get Accounts - response - settings table

Get Accounts - response - bundles

Name	Description	Required	Value
displayName	The Bundle display name	false	string
majorVersion	The Bundle major version	false	integer
minorVersion	The Bundle minor version	false	integer
name	The Bundle internal api name	false	string
surfaces	The Surfaces in the Bundle	false	see Get Accounts - response - surfaces table

totalSurfaces	The total number of Surfaces in this Bundle. -1 indicates unlimited count.	false	integer
---------------	--	-------	---------

Get Accounts - response - surfaces

Name	Description	Required	Value
count	The Surface count. -1 indicates unlimited count	false	integer
name	The Surface name.	false	string

Get Accounts - response - modules

Name	Description	Required	Value
displayName	The Add-on display name	false	string
majorVersion	The Add-on major version	false	integer
name	The Add-on internal api name	false	string

Get Accounts - response - settings

Name	Description	Required	Value
displayName	[DEPRECATED] The Setting display name	false	string
groupName	The Setting group name	false	
setting	The Setting display name	false	
settingGroup	[DEPRECATED] The Setting group name	false	string
settingGroupDisplayName	The Setting group display name	false	string

Get Accounts - response - promptFields

Name	Description	Required	Value
------	-------------	----------	-------

promptRegion	Region associated with the prompt	false	enum
promptTenantName	Tenant name associated with the prompt	false	string
promptUserEmail	Email of the user associated with the prompt	false	string
promptUserName	Name of the user associated with the prompt	false	string

Get Accounts - response - skus

Name	Description	Required	Value
agentsInSku	Total agents commissioned in this SKU.	false	integer
totalLicenses	Number of licenses for this specific SKU. Applicable only if unlimited is False	false	integer
type	The suite of product features active for this account	false	enum
unlimited	True if this is an unlimited SKU.	false	boolean

Create Account

POST /web/api/v2.1/accounts

Create a new Account. This command requires Global permissions and an MSSP deployment. Consult with your SE before you run this command. An Account is a logical segment with permissions to configure features for specific Sites. Multiple Accounts can be useful for deployments with multiple Sites for third-parties (such as MSSP). Each Account has one or more SKUs, that you assign to Sites. If an Account has the Complete SKU, and you create a new Site in the Account, it will automatically have the Complete SKU. Best practice: Run "name-available" first, to make sure the name is unique in your deployment.

BEST PRACTICE

Run "name-available" first, to make sure the name is unique in your deployment.

Response Messages

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Create Account - body - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Create Account - body - promptFields

Name	Description	Required	Value
promptRegion	Region associated with the prompt	false	enum
promptTenantName	Tenant name associated with the prompt	false	string
promptUserEmail	Email of the user associated with the prompt	false	string
promptUserName	Name of the user associated with the prompt	false	string

Create Account - body - skus

Name	Description	Required	Value
totalLicenses	Number of licenses for this specific SKU. Applicable only if unlimited is False	false	integer
type	The suite of product features active for this Account	false	enum
unlimited	True if this is an unlimited SKU. Total licenses will be ignored if unlimited is True	false	boolean

Get Account by ID

GET /web/api/v2.1/accounts/{account_id}

Get Account data from a given Account ID. To get an Account ID, run "accounts".

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

404 - Account not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get Account by ID - response - data table

Get Account by ID - response - skus

Name	Description	Required	Value
------	-------------	----------	-------

agentsInSku	Total agents commissioned in this SKU.	false	integer
totalLicenses	Number of licenses for this specific SKU. Applicable only if unlimited is False	false	integer
type	The suite of product features active for this account	false	enum
unlimited	True if this is an unlimited SKU.	false	boolean

Update Account

PUT /web/api/v2.1/accounts/{account_id}

Change the data of an Account. This command requires a Global user or an Account user and Admin role. Use this command to change the name, ID, SKUs and how they are distributed among Sites and Agents, and more. (See the Body sample.) Best practice: Consult with your SentinelOne SE.

BEST PRACTICE

Consult with your SentinelOne SE.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

404 - Account not found

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection process	false	integer
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Update Account - body - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Update Account - body - promptFields

Name	Description	Required	Value
promptRegion	Region associated with the prompt	false	enum
promptTenantName	Tenant name associated with the prompt	false	string
promptUserEmail	Email of the user associated with the prompt	false	string
promptUserName	Name of the user associated with the prompt	false	string

Update Account - body - skus

Name	Description	Required	Value
totalLicenses	Number of licenses for this specific SKU. Applicable only if unlimited is False	false	integer
type	The suite of product features active for this Account	false	enum
unlimited	True if this is an unlimited SKU. Total licenses will be ignored if unlimited is True	false	boolean

Revert Policy

PUT /web/api/v2.1/accounts/{account_id}/revert-policy

The policy of the Account is based on the default Global policy and is enforced by all endpoints in the Sites and Groups of the Account (if you did not change the Site or Group policies). If you change the Account policy, you can use this command to revert it to the default Global policy.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Revert Policy - response - data table
errors	Errors	false	array

Revert Policy - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Revert Policy - body - data

Name	Description	Required	Value
id	Id	false	string

Reactivate Account

PUT /web/api/v2.1/accounts/{account_id}/reactivate

Reactivate an expired Account. This command requires a Global user or Support. Consult with your SentinelOne SE.

Response Messages

200 - Account reactivated

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

404 - Account not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Reactivate Account - response - data table
errors	Errors	false	array

Reactivate Account - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Body Schema

Name	Description	Required	Value
data	Data	true	see Reactivate Account - body - data table

Reactivate Account - body - data

Name	Description	Required	Value
expiration	New expiration date for the Account	false	string
unlimited	If false enter an expiration date and time (yyyy-mm-ddThh:mm:ss	false	boolean

Expire an Account

POST /web/api/v2.1/accounts/{account_id}/expire-now

Expire an Account immediately. The user must have Global access or Account access with permissions for the Account. Best practice: Consult with Support before you use this command.

BEST PRACTICE

Consult with Support before you use this command.

Response Messages

200 - Expire account now

401 - Unauthorized access - please sign in and retry.

404 - Account not found

Response Schema

Get Uninstall Password - response - data

Name	Description	Required	Value
password	msg EC signed with private key: v1.base64(data).base64(ES384(data))	false	string

Generate/Regenerate Uninstall Password

POST /web/api/v2.1/accounts/{account_id}/uninstall-password/generate

You can uninstall all Agents of one Account with one command that requires a password. This command sets a new account-level uninstall password.

To enable this feature, submit a ticket with Support.

Best Practice: After you uninstall the Agents and install again, revoke the passphrase.

Applicable on Windows (versions 4.4+) and Linux (versions 21.7+) Agents.

BEST PRACTICE

After you uninstall the Agents and install again, revoke the passphrase.

Applicable on Windows (versions 4.4+) and Linux (versions 21.7+) Agents.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

generatedByld	The ID of the user that generated the uninstall password	false	integer
revokedByld	The ID of the user that revoked the uninstall password	false	integer

Export Accounts

GET /web/api/v2.1/export/accounts

Export Accounts data to a CSV, for Accounts that match the filter.

Parameters

accountids	optional	List of Account IDs to search for. Example: "225494730938493804,225494730938493915".
accounttype	optional	Account type. Example: "Trial".
activelicense	optional	Active licenses
billingmode	optional	Billing mode. Example: "subscription".
createdat	optional	Timestamp of Account creation. Example: "2018-02-27T04:49:26.257525Z".
expiration	optional	Expiration. Example: "2018-02-27T04:49:26.257525Z".
features	optional	Filter the list of Accounts for those that support this feature. Example: "firewall-control".

ids	optional	A list of Account IDs. Example: "225494730938493804,225494730938493915".
isdefault	optional	Is default
module	optional	Module. Example: "star,rso".
name	optional	Name. Example: "My Account".
name__contains	optional	Free-text filter by account name (supports multiple values)
query	optional	Full text search for fields: name. (Note: on single-Account Consoles, the Account name will not be matched)
sku	optional	Sku. Example: "core".
state	optional	Account state. Example: "active".
states	optional	Filter by state, such as active or expired.
statesnin	optional	List of states to not filter
totallicenses	optional	Total licenses
updatedat	optional	Timestamp of last update. Example: "2018-02-27T04:49:26.257525Z".
usagetype	optional	Usage type. Example: "customer".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Activities

Get Activities

GET /web/api/v2.1/activities

Get the activities, and their data, that match the filters.

We recommend that you set some values for the filters. The full list will be too large to be useful.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
activitytypes	optional	Return only these activity codes (comma-separated list). Select a code from the drop-down, or see the id field from the Get activity types command. . Example: "52,53,71,72".
activityuuids	optional	Return activities by specific activity UUIDs. Example: "a2c8037c-e6df-436d-b92b-bc09a418717e,f15b308b-fab9-4c0b-b6f5-17d236a7bf55".
agentids	optional	Return activities related to specified agents. Example: "225494730938493804,225494730938493915".
alertids	optional	Return activities related to specified alerts. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__between	optional	Get activities created in this range (inclusive) of a start timestamp and an end timestamp. Example: "1514978764288-1514978999999".
createdat__gt	optional	Get activities created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Get activities created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Get activities created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Get activities created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	Filter activities by specific activity IDs. Example: "225494730938493804,225494730938493915".
includehidden	optional	Include internal activities hidden from display. Example: "False".
limit	optional	Limit number of returned items (1-1000). Example: "10".

relatedids	optional	Return activities related to specified entities. Example: "56ee72a79c7e5c62dd36e6b1".
ruleids	optional	Return activities related to specified rules. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
threatids	optional	Return activities related to specified threats. Example: "225494730938493804,225494730938493915".
useremails	optional	Email of the user who invoked the activity (If applicable)
userids	optional	The user who invoked the activity (If applicable). Example: "225494730938493804,225494730938493915".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Activities - response - pagination table
data	Response data	false	see Get Activities - response - data table
errors	Errors	false	array

Get Activities - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Activities - response - data

Name	Description	Required	Value
accountId	Related account id (If applicable)	false	string
accountName	Related account name (If applicable)	false	string
activityType	Activity type	false	integer
activityUuid	Activity UUID	false	string
agentId	Related agent (If applicable)	false	string
agentUpdatedVersion	Agent's new version (If applicable)	false	string
comments	Comments	false	string
createdAt	Activity creation time (UTC)	false	string
data	Extra activity specific data	false	object
description	Extra activity information	false	string
groupId	Related group id (If applicable)	false	string
groupName	Related group name (If applicable)	false	string
hash	Threat file hash (If applicable)	false	string
id	Activity ID	false	string
osFamily	Agent's OS type (if applicable)	false	enum
primaryDescription	Primary description	false	string
secondaryDescription	Secondary description	false	string
siteId	Related site id (If applicable)	false	string

siteName	Related site name (If applicable)	false	string
threatId	Related threat (If applicable)	false	string
updatedAt	Activity last updated time (UTC)	false	string
userId	The user who invoked the activity (If applicable)	false	string

Get Activity Types

GET /web/api/v2.1/activities/types

Get a list of activity types. This is useful to see valid values to filter activities in other commands.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get Activity Types - response - data table
errors	Errors	false	array

Get Activity Types - response - data

Name	Description	Required	Value
action	Action described in the activity	false	string
descriptionTemplate	Activity description template as seen in activity page	false	string
id	Activity type ID	false	integer

Last activity as Syslog message

GET /web/api/v2.1/last-activity-as-syslog

To see examples of Syslog messages, you can get the Syslog message that corresponds to the last activity that matches the filter. This is not intended for production purposes.

If Syslog messages that you expected to see are not in the response, make sure you selected "Syslog" for the activity type in Console > Settings > Notifications.

To see your Syslog settings, run: "settings/notifications".

To change the settings, run: "settings/notifications" with the changes in the body of the request.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
activitytypes	optional	Return only these activity codes (comma-separated list). Select a code from the drop-down, or see the id field from the Get activity types command. . Example: "52,53,71,72".
activityuuids	optional	Return activities by specific activity UUIDs. Example: "a2c8037c-e6df-436d-b92b-bc09a418717e,f15b308b-fab9-4c0b-b6f5-17d236a7bf55".
agentids	optional	Return activities related to specified agents. Example: "225494730938493804,225494730938493915".
alertids	optional	Return activities related to specified alerts. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__between	optional	Get activities created in this range (inclusive) of a start timestamp and an end timestamp. Example:

		"1514978764288-15149789999999".
createdat__gt	optional	Get activities created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Get activities created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Get activities created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Get activities created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	Filter activities by specific activity IDs. Example: "225494730938493804,225494730938493915".
includehidden	optional	Include internal activities hidden from display. Example: "False".
limit	optional	Limit number of returned items (1-1000). Example: "10".
relatedids	optional	Return activities related to specified entities. Example: "56ee72a79c7e5c62dd36e6b1".
ruleids	optional	Return activities related to specified rules. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
threatids	optional	Return activities related to specified threats. Example: "225494730938493804,225494730938493915".
useremails	optional	Email of the user who invoked the activity (If applicable)
userids	optional	The user who invoked the activity (If applicable). Example:

		"225494730938493804,225494730938493915".

createdat__lt	optional	Get activities created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Get activities created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	Filter activities by specific activity IDs. Example: "225494730938493804,225494730938493915".
includehidden	optional	Include internal activities hidden from display. Example: "False".
relatedids	optional	Return activities related to specified entities. Example: "56ee72a79c7e5c62dd36e6b1".
rowslimit	optional	Limit number of returned items (1-10000). Example: "100".
ruleids	optional	Return activities related to specified rules. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
threatids	optional	Return activities related to specified threats. Example: "225494730938493804,225494730938493915".
useremails	optional	Email of the user who invoked the activity (If applicable)
userids	optional	The user who invoked the activity (If applicable). Example: "225494730938493804,225494730938493915".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Agent Actions

Broadcast Message

POST /web/api/v2.1/agents/actions/broadcast

You can send a message through the Agents that users can see.

This is useful for endpoints that have human users. This command is supported on Windows and macOS endpoints (not supported on Linux). The message is sent to all endpoints that match the filter.

Put the message in the data parameter: "data":{"message":"<your message>"}

The message must be 140 characters or less.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permissions to perform the requested action

Response Schema

Name	Description	Required	Value
data	Response data	false	see Broadcast Message - response - data table
errors	Errors	false	array

Broadcast Message - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Broadcast Message - body - data table
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Broadcast Message - body - filter table

Broadcast Message - body - data

Name	Description	Required	Value
message	Message to broadcast to agents.	true	string

Broadcast Message - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
activeProtection	Included agent active protections	false	string []
activeThreats	Include Agents with this amount of active threats	false	integer
activeThreats__gt	Include Agents with at least this amount of active threats	false	integer
adComputerMember__contains	Free-text filter by Active Directory computer groups string (supports multiple values)	false	string []
adComputerName__contains	Free-text filter by Active Directory computer name string (supports multiple values)	false	string []
adComputerQuery__contains	Free-text filter by Active Directory computer name or its groups (supports multiple values)	false	string []
adQuery	An Active Directory query string	false	string
adQuery__contains	Free-text filter by Active Directory string (supports multiple values)	false	string []
adUserMember__contains	Free-text filter by Active Directory user groups string (supports multiple values)	false	string []
adUserName__contains	Free-text filter by Active Directory username string (supports multiple values)	false	string []
adUserQuery__contains	Free-text filter by Active Directory computer name or its groups (supports multiple values)	false	string []

agentNamespace__contains	Free-text filter by agent namespace (supports multiple values)	false	string []
agentOperatingMode__contains	Free-text filter by Agent Operating Mode (supports multiple values)	false	string []
agentOperatingModes	Agent operating mode in	false	string []
agentOperatingModesNin	Agent operating mode nin	false	string []
agentPodName__contains	Free-text filter by agent pod name (supports multiple values)	false	string []
agentVersion__between	Version range for agent version (format: <from_version>-<to_version>, inclusive)	false	string
agentVersion__gt	Agents versions greater than given version	false	string
agentVersion__gte	Agents versions greater than or equal to given version	false	string
agentVersion__lt	Agents versions less than given version	false	string
agentVersion__lte	Agents versions less than or equal to given version	false	string
agentVersions	Agent versions to include	false	string []
agentVersionsNin	Agent versions not to include	false	string []
appsVulnerabilityStatuses	Apps vulnerability status in	false	string []
appsVulnerabilityStatusesNin	Apps vulnerability status nin	false	string []
awsRole__contains	Free-text filter by aws role(supports multiple values)	false	string []
awsSecurityGroups__contains	Free-text filter by aws securityGroups(supports multiple values)	false	string []
awsSubnetIds__contains	Free-text filter by aws subnet ids (supports multiple values)	false	string []
azureResourceGroup__contains	Free-text filter by azure resource group(supports multiple values)	false	string []
cloudAccount__contains	Free-text filter by cloud account (supports multiple values)	false	string []
cloudImage__contains	Free-text filter by cloud image (supports multiple values)	false	string []
cloudInstanceId__contains	Free-text filter by cloud instance	false	string []

	id(supports multiple values)		
cloudInstanceSize__contains	Free-text filter by cloud instance size(supports multiple values)	false	string []
cloudLocation__contains	Free-text filter by cloud location (supports multiple values)	false	string []
cloudNetwork__contains	Free-text filter by cloud network (supports multiple values)	false	string []
cloudProvider	Agents from which cloud provider	false	string []
cloudProviderNin	Exclude Agents from these cloud provider	false	string []
cloudTags__contains	Free-text filter by cloud tags (supports multiple values)	false	string []
clusterName__contains	Free-text filter by cluster name (supports multiple values)	false	string []
computerName	Computer name	false	string
computerName__contains	Free-text filter by computer name (supports multiple values)	false	string []
computerName__like	Match computer name partially (substring)	false	string
computerNameOrUuid__contains	Free-text filter by computer name or uuid (supports multiple values)	false	string []
consoleMigrationStatuses	Migration status in	false	string []
consoleMigrationStatusesNin	Migration status nin	false	string []
containerizedWorkloadCounts	Containerized workload counts	false	see Broadcast Message - body - containerizedWorkloadCounts table
coreCount__between	Possible number of CPU cores (inclusive)	false	string
coreCount__gt	CPU cores (more than)	false	integer
coreCount__gte	CPU cores (more than or equal)	false	integer
coreCount__lt	CPU cores (less than)	false	integer
coreCount__lte	CPU cores (less than or equal)	false	integer
cpuCount__between	Possible number of CPU cores (inclusive)	false	string
cpuCount__gt	Number of CPUs (more than)	false	integer
cpuCount__gte	Number of CPUs (more than or equal)	false	integer
cpuCount__lt	Number of CPUs (less than)	false	integer

cpuCount__lte	Number of CPUs (less than or equal)	false	integer
cpuld__contains	Free-text filter by CPU name (supports multiple values)	false	string []
createdAt__between	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
createdAt__gt	Agents created after this timestamp	false	string
createdAt__gte	Agents created after or at this timestamp	false	string
createdAt__lt	Agents created before this timestamp	false	string
createdAt__lte	Agents created before or at this timestamp	false	string
csvFilterId	The ID of the CSV file to filter by	false	string
decommissionedAt__between	Date range for decommission time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
decommissionedAt__gt	Agents decommissioned after this timestamp	false	string
decommissionedAt__gte	Agents decommissioned after or at this timestamp	false	string
decommissionedAt__lt	Agents decommissioned before this timestamp	false	string
decommissionedAt__lte	Agents decommissioned before this timestamp	false	string
domains	Included network domains	false	string []
domainsNin	Not included network domains	false	string []
ecsClusterName__contains	Free-text filter by ECS cluster name	false	string []
ecsServiceArn__contains	Free-text filter by ECS service arn	false	string []
ecsServiceName__contains	Free-text filter by ECS service name	false	string []
ecsTaskArn__contains	Free-text filter by ECS task arn	false	string []
ecsTaskAvailabilityZone__contains	Free-text filter by ECS task availability zone	false	string []
ecsTaskDefinitionArn__contains	Free-text filter by ECS task definition arn	false	string []
ecsTaskDefinitionFamily__contains	Free-text filter by ECS task definition family	false	string []

ecsTaskDefinitionRevision__contains	Free-text filter by ECS task definition revision	false	string []
ecsType__contains	Free-text filter by ECS type	false	string []
ecsVersion__contains	Free-text filter by ECS version	false	string []
encryptedApplications	Disk encryption status	false	boolean []
entraild__contains	Free-text filter by Entra ID (supports multiple values)	false	string []
externalId__contains	Free-text filter by external ID (Customer ID)	false	string []
externalIp__contains	Free-text filter by visible IP (supports multiple values)	false	string []
filteredGroupIds	List of Group IDs to filter by	false	string []
filteredSiteIds	List of Site IDs to filter by	false	string []
filterId	Include all Agents matching this saved filter	false	string
firewallEnabled	The agents supports Firewall Control and it is enabled for the agent's group	false	boolean []
gatewayIp	Gateway ip	false	string
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of Group IDs to filter by	false	string []
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean []
hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
ids	Included Agent IDs	false	string []
idsNin	Excluded Agent IDs	false	string []
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []
isActive	Include only active Agents	false	boolean []

isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []
isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA enabled if True, or not if False	false	boolean []
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []
isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastActiveDate__gt	Agents last active after this time	false	string
lastActiveDate__gte	Agents last active after or at this time	false	string
lastActiveDate__lt	Agents last active before this time	false	string
lastActiveDate__lte	Agents last active before or at this time	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string

lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string
lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string
liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []

operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []
osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string

remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []
scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean

threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer
totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Broadcast Message - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Connect to Network

POST /web/api/v2.1/agents/actions/connect

After you run "disconnect from network" on endpoints, analyze the issue, and mitigate threats. Use this command to reconnect to the network all endpoints that match the filter. To learn more, see "Disconnect from Network".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permissions to perform the requested action

Response Schema

Name	Description	Required	Value
data	Response data	false	see Connect to Network - response - data table
errors	Errors	false	array

Connect to Network - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Connect to Network - body - filter table
data	Data	false	see Connect to Network - body - data table

liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []

osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Connect to Network - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Connect to Network - body - data

Fetch Logs

POST /web/api/v2.1/agents/actions/fetch-logs

Get the Agent and Endpoint logs from Agents that match the filter.

The Agent logs are encrypted and only Support can read them.

The Endpoint logs, for operations on the computers, laptops, or servers that have the Agent installed, are readable. The Endpoint logs are available for Windows endpoints only and require Agent version 3.6 or later. After you run this command, download the fetched logs. You can download the logs from the Console GUI or collect them.

On Windows: C:\ProgramData\Sentinel\logs.

On macOS: Run `sudo sentinelctl logreport` and get the log files on the desktop.

On Linux: Run `sudo /opt/sentinelone/bin/sentinelctl log generate`.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permissions to perform the requested action

Response Schema

Name	Description	Required	Value
data	Response data	false	see Fetch Logs - response - data table
errors	Errors	false	array

Fetch Logs - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Fetch Logs - body - filter table
data	Data	false	see Fetch Logs - body - data table

networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []

osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Fetch Logs - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Fetch Logs - body - data

Name	Description	Required	Value
agentLogs	Fetch Agent logs	false	boolean
customerFacingLogs	Fetch customer-facing logs	false	boolean
platformLogs	Actively fetch logs from the relevant platform: windows/mac/linux	false	boolean

Initiate Scan

POST /web/api/v2.1/agents/actions/initiate-scan

Use this command to run a Full Disk Scan on Agents that match the filter.

Full Disk Scan finds dormant suspicious activity, threats, and compliance violations, that are then mitigated according to the policy. It scans the local file system.

Full Disk Scan does not inspect drives that require user credentials (such as network drives) or external drives.

Full Disk Scan does not work on hashes. It does not check each file against the blocklist.

If the Static AI determines a file is suspicious, the Agent calculates its hash and sees if the hash is in the blocklist. If a file is executed, all aspects of the process are inspected, including hash-based analysis and blocklist checks. Full Disk Scan can run when the endpoint is offline, but when it is connected to the Management, it can use the most updated Cloud data to improve detection.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permissions to perform the requested action

Response Schema

Name	Description	Required	Value
data	Response data	false	see Initiate Scan - response - data table
errors	Errors	false	array

Initiate Scan - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Initiate Scan - body - filter table

Disconnect from Network

POST /web/api/v2.1/agents/actions/disconnect

Use this command to isolate (quarantine) endpoints from the network, if the endpoints match the filter.

The Agent can communicate with the Management, which lets you analyze and mitigate threats. Best practice: For Active threats that spread, apply "Disconnect from network" immediately. In the policy, you can set this is to be automatic. When the Agent detects a high-confidence malicious threat, it will mitigate the threat (on Protect) with the action set by the policy. Then the Agent will immediately quarantine the endpoint. To make Disconnect from network automatic in an Account policy, run the "accounts/{id} command (see "Update Account") with: "networkQuarantine":true.

BEST PRACTICE

For Active threats that spread, apply "Disconnect from network" immediately. In the policy, you can set this is to be automatic. When the Agent detects a high-confidence malicious threat, it will mitigate the threat (on Protect) with the action set by the policy. Then the Agent will immediately quarantine the endpoint. To make Disconnect from network automatic in an Account policy, run the "accounts/{id} command (see "Update Account") with: "networkQuarantine":true.

ecsVersion__contains	Free-text filter by ECS version	false	string []
encryptedApplications	Disk encryption status	false	boolean []
entraId__contains	Free-text filter by Entra ID (supports multiple values)	false	string []

externalId__contains	Free-text filter by external ID (Customer ID)	false	string []
externalIp__contains	Free-text filter by visible IP (supports multiple values)	false	string []
filteredGroupIds	List of Group IDs to filter by	false	string []
filteredSiteIds	List of Site IDs to filter by	false	string []
filterId	Include all Agents matching this saved filter	false	string
firewallEnabled	The agents supports Firewall Control and it is enabled for the agent's group	false	boolean []
gatewayIp	Gateway ip	false	string
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of network groups	false	string []
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean []
hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
ids	Included Agent IDs	false	string []
idsNin	Excluded Agent IDs	false	string []
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []
isActive	Include only active Agents	false	boolean []
isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []
isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA	false	boolean []

	enabled if True, or not if False		
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []
isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastActiveDate__gt	Agents last active after this time	false	string
lastActiveDate__gte	Agents last active after or at this time	false	string
lastActiveDate__lt	Agents last active before this time	false	string
lastActiveDate__lte	Agents last active before or at this time	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string
lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string

liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []

osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Disconnect from Network - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
podsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Disconnect from Network - body - data

Decommission

POST /web/api/v2.1/agents/actions/decommission

If a user is scheduled for time off, or a device is scheduled for maintenance, you can decommission the Agent. This removes the Agent from the Management Console. When the Agent communicates with the Management again, the Management recommissions it and returns it to the Console. Use this command to decommission the Agents that match the filter.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permissions to perform the requested action

Response Schema

Name	Description	Required	Value
data	Response data	false	see Decommission - response - data table
errors	Errors	false	array

Decommission - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
filter	Applied filter - only matched Agents will be affected by the requested action. Note: One of these filter arguments must be supplied: ids, groupIds, filterId.	true	see Decommission - body - filter table
data	Data	false	see Decommission - body - data table

Decommission - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
activeProtection	Included agent active protections	false	string []
activeThreats	Include Agents with this amount of active threats	false	integer
activeThreats__gt	Include Agents with at least this amount of active threats	false	integer

sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Decommission - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Decommission - body - data

Uninstall

POST /web/api/v2.1/agents/actions/uninstall

Use this command to uninstall Agents that match the filter. For Windows and macOS, make sure that all remnants of the Agent are removed: reboot the endpoints after uninstall. Use the "restart" command.

Response Messages

- 200 - Success
- 400 - Invalid user input received. See error details for further information.
- 401 - Unauthorized access - please sign in and retry.
- 403 - User has insufficient permissions to perform the requested action

Response Schema

Name	Description	Required	Value
data	Response data	false	see Uninstall - response - data table
errors	Errors	false	array

Uninstall - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
filter	Applied filter - only matched Agents will be affected by the requested action. Note: One of these filter arguments must be supplied: ids, groupIds, filterId.	true	see Uninstall - body - filter table
data	Data	false	see Uninstall - body - data table

Uninstall - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
activeProtection	Included agent active protections	false	string []

externalIp__contains	Free-text filter by visible IP (supports multiple values)	false	string []
filteredGroupIds	List of Group IDs to filter by	false	string []
filteredSiteIds	List of Site IDs to filter by	false	string []
filterId	Include all Agents matching this saved filter	false	string
firewallEnabled	The agents supports Firewall Control and it is enabled for the agent's group	false	boolean []
gatewayIp	Gateway ip	false	string
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of network groups	false	string []
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean []
hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
ids	Included Agent IDs	false	string []
idsNin	Excluded Agent IDs	false	string []
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []
isActive	Include only active Agents	false	boolean []
isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []
isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA	false	boolean []

	enabled if True, or not if False		
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []
isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastActiveDate__gt	Agents last active after this time	false	string
lastActiveDate__gte	Agents last active after or at this time	false	string
lastActiveDate__lt	Agents last active before this time	false	string
lastActiveDate__lte	Agents last active before or at this time	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string
lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string

liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []

osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Uninstall - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
podsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Uninstall - body - data

Restart

POST /web/api/v2.1/agents/actions/restart-machine

Use this command to restart endpoints that have an Agent installed and that fit the filter. We recommend that you use the "broadcast" command to send a message to users of endpoints before you restart their computers.

Response Messages

- 200 - Success
- 400 - Invalid user input received. See error details for further information.
- 401 - Unauthorized access - please sign in and retry.
- 403 - User has insufficient permissions to perform the requested action

Response Schema

Name	Description	Required	Value
data	Response data	false	see Restart - response - data table
errors	Errors	false	array

Restart - response - data

Name	Description	Required	Value

networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []

osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Restart - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Restart - body - data

Shutdown

POST /web/api/v2.1/agents/actions/shutdown

You can shut down endpoints remotely for performance, maintenance, or security. This command shuts down all endpoints that match the filter. Best Practice: If an endpoint is infected, we recommend the "disconnect" command and not the "shutdown" command. The disconnect command secures the environment from infection while you analyze the cause and best response. If the endpoint is offline, the shutdown command is not available.

BEST PRACTICE

If an endpoint is infected, we recommend the "disconnect" command and not the "shutdown" command. The disconnect command secures the environment from infection while you analyze the cause and best response.

If the endpoint is offline, the shutdown command is not available.

Response Messages

- 200 - Success
- 400 - Invalid user input received. See error details for further information.

Approve Uninstall

POST /web/api/v2.1/agents/actions/approve-uninstall

If a user tries to uninstall the SentinelOne Agent from an endpoint, an uninstall request is sent to the Management. You must approve the request.

After you approve a request, users see a message that the request was approved. They can restart to complete the Agent uninstall.

We recommend that you do not approve these requests until you understand the reason for the request, you agree with the request, and you have alternative security for the endpoint until you install the Agent again.

This command will approve pending uninstall requests for all Agents that match the filter.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permissions to perform the requested action

entraId__contains	Free-text filter by Entra ID (supports multiple values)	false	string []

externalId__contains	Free-text filter by external ID (Customer ID)	false	string []
externalIp__contains	Free-text filter by visible IP (supports multiple values)	false	string []
filteredGroupIds	List of Group IDs to filter by	false	string []
filteredSiteIds	List of Site IDs to filter by	false	string []
filterId	Include all Agents matching this saved filter	false	string
firewallEnabled	The agents supports Firewall Control and it is enabled for the agent's group	false	boolean []
gatewayIp	Gateway ip	false	string
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of Group IDs to filter by	false	string []
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean []
hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
ids	Included Agent IDs	false	string []
idsNin	Excluded Agent IDs	false	string []
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []
isActive	Include only active Agents	false	boolean []
isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []
isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA	false	boolean []

	enabled if True, or not if False		
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []
isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastActiveDate__gt	Agents last active after this time	false	string
lastActiveDate__gte	Agents last active after or at this time	false	string
lastActiveDate__lt	Agents last active before this time	false	string
lastActiveDate__lte	Agents last active before or at this time	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string
lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string

liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []

osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Approve Uninstall - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
podsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Approve Uninstall - body - data

Reject uninstall

POST /web/api/v2.1/agents/actions/reject-uninstall

Reject uninstall requests for all Agents that match the filter. To learn more about Uninstall Requests, see "Approve Uninstall".

Response Messages

- 200 - Success
- 400 - Invalid user input received. See error details for further information.
- 401 - Unauthorized access - please sign in and retry.
- 403 - User has insufficient permissions to perform the requested action

Response Schema

Name	Description	Required	Value

Reject uninstall - body - data

Update Software

POST /web/api/v2.1/agents/actions/update-software

Use this command to update the Agent version on endpoints that have the Agent installed and that match the filter. For a cloud-based Management, SentinelOne updates your Management Console with the latest Agent versions. For On-Prem environments, or if you need a package that is not in your Management Console, request files from SentinelOne Support.

IMPORTANT: These parameters are required:

packageType - example: "packageType": "AgentAndRanger", osType - example: "osType": "windows", fileName - example: "fileName": "SentinelInstaller-x86_windows_32bit_v4_6_12_241.exe"

Best Practice: Upgrade your SentinelOne Agents by group or OS. Note about macOS endpoints: It is important that you upgrade the Agent before the endpoint operating system is upgraded to a version that the Agent does not support. More best practices: read the Release Notes, review the system requirements, and if you decide to not upgrade Agents yet, review the Agent Lifecycle. Make sure your deployment is in the supportable bounds.

BEST PRACTICE

Upgrade your SentinelOne Agents by group or OS. Note about macOS endpoints: It is important that you upgrade the Agent before the endpoint operating system is upgraded to a version that the Agent does not support. More best practices: read the Release Notes, review the system requirements, and if you decide to not upgrade Agents yet, review the Agent Lifecycle. Make sure your deployment is in the supportable bounds.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permissions to perform the requested action

409 - The Agent is automatically upgraded according to its Upgrade Policy. Manually upgrading the Agent may cause conflicts

Response Schema

Name	Description	Required	Value
data	Response data	false	see Update Software - response - data table

errors	Errors	false	array
--------	--------	-------	-------

Update Software - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Update Software - body - data table
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Update Software - body - filter table

Update Software - body - data

Name	Description	Required	Value
allowDowngrade	Allows or disallows downgrading the Agent version	false	boolean
fileName	Upgrade with a given uploaded package, locate package by its filename	false	string
ignoreConflicts	Ignore conflicts that may arise when you upgrade an Agent that has an active Upgrade Policy	false	boolean
isScheduled	Upgrade according to the defined scheduled in agent upgrade configuration	false	boolean
osType	Filter by specific OS type, can be used in conjunction with "fileName" or "path"	false	enum
packageId	Upgrade with a given uploaded package, located package by its ID	false	string
packageType	Package type	false	enum
path	Upgrade from local path at the endpoint	false	string

scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each	false	string

	value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.		
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer
totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this	false	string

	timestamp		
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Update Software - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
podsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Reset Local Config

POST /web/api/v2.1/agents/actions/reset-local-config

SentinelCtl is the CLI for Agents. It runs commands directly on one Agent at a time. You can use this command to clear the SentinelCtl changes from all Agents that match the filter. Specific SentinelCtl settings are not cleared:

On Windows: proxy address and Management token.

On macOS: Management server address and server site key.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permissions to perform the requested action

Response Schema

Name	Description	Required	Value
data	Response data	false	see Reset Local Config - response - data table
errors	Errors	false	array

Reset Local Config - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Reset Local Config - body - filter table
data	Data	false	see Reset Local Config - body - data table

threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Reset Local Config - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Reset Local Config - body - data

Set Persistent Configuration Overrides

POST /web/api/v2.1/agents/actions/set-config

This command requires Global permissions or Support.

The configuration of an Agent can be changed in different ways, such as through Policy settings, Policy Override, SentinelCtl, and changes to the LocalConfig.json file. For Windows, Policy Override overwrites policy settings, and local changes (to the file and from this command) overwrite Policy Override from the Console or with policy updates from the API.

For macOS, the Policy Override has the highest priority. If you run this command and then update a Group policy that affects both Windows and macOS endpoints, the settings of this command are applied to the Windows endpoints. But the macOS endpoints will apply the settings of the policy, for settings that are duplicated in both the policy and this command.

When you use this command, enter the filter values to set which Agents get the change. Then use the data parameter to set the actual changes. Get the JSON settings for data from the Agent Configuration or see the Knowledge Base: <https://support.sentinelone.com/hc/en-us/articles/360022158673-sentinelctl>

Response Messages

- 200 - Success
- 400 - Invalid user input received. See error details for further information.
- 401 - Unauthorized access - please sign in and retry.
- 403 - User has insufficient permissions to perform the requested action

Response Schema

Name	Description	Required	Value
data	Response data	false	see Set Persistent Configuration Overrides - response - data table
errors	Errors	false	array

Set Persistent Configuration Overrides - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Set Persistent Configuration Overrides - body - data table
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Set Persistent Configuration Overrides - body - filter table

lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string
liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []

operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []
osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string

remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []
scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean

threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer
totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Set Persistent Configuration Overrides - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Set External ID

POST /web/api/v2.1/agents/actions/set-external-id

You can add a Customer Identifier (a string) to identify each endpoint or to tag sets of endpoints. The string shows in the Endpoint Details of the Management Console. For example, you can tag endpoints based on their state, installed applications, or endpoint status. The identifier is set on all Agents that match the filter.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permissions to perform the requested action

lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string

lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string
lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string
liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []

operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []
osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string

remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []
scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean

threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer
totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Set External ID - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Fetch Files

POST /web/api/v2.1/agents/{agent_id}/actions/fetch-files

Fetch files from endpoints (up to 10 MB for each command) to analyze the root of threats (that come from files - of course, this does not help for fileless threats). Set the pathnames in the body of the request.

Regular expressions and metacharacters are not allowed. Spaces are allowed.

You must enter a new password, which you will use to open the archive of downloaded files. The password must be 10 or more characters with a mix of upper and lower case letters, numbers, and symbols.

This command collects the file and uploads them to the Management. To get the files, download them from the Management.

FedRAMP-compliant and other Managements in GovCloud require a Support ticket to enable this feature.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permissions to perform the requested action

404 - Agent not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Fetch Files - response - data table
errors	Errors	false	array

Fetch Files - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Body Schema

Name	Description	Required	Value
data	Data	true	see Fetch Files - body - data table

Fetch Files - body - data

Name	Description	Required	Value
password	File encryption password	true	string
files	List of files to fetch (absolute paths, up to 10 files)	false	string []

Move between Sites

POST /web/api/v2.1/agents/actions/move-to-site

This command requires Account or Global level access.

Agents are assigned to a Site when they are first installed with a Site Token. If you have the required access level, a role with permissions (the SOC role does not allow this action), and permission for both Sites, you can move Agents from one Site to a different Site. Agents will be moved to the best matching dynamic group, or to the Default group if no dynamic group matches.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permissions to perform the requested action

Response Schema

Name	Description	Required	Value
data	Response data	false	see Move between Sites - response - data table
errors	Errors	false	array

Move between Sites - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Move between Sites - body - data table
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Move between Sites - body - filter table

updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Move between Sites - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Fetch Firewall Rules

POST /web/api/v2.1/agents/actions/fetch-firewall-rules

Firewall Control is disabled at the Global level. When it is first enabled, all Sites and Groups inherit the Firewall Control policy from the Global policy. Agents have Firewall Control disabled, until they connect to a Site or Group with an enabled Firewall Control policy.

After Agents get Firewall Control, if you add or change a Firewall rule, you can use this command to make sure all Agents fetch the rules, (though Agents usually update their policies every few seconds). Use the filter parameter to set which Agents will fetch the rules, if you do not want all of them to attempt it.

Firewall Control requires a Control SKU.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Fetch Firewall Rules - response - data table
errors	Errors	false	array

Fetch Firewall Rules - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Fetch Firewall Rules - body - data table
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Fetch Firewall Rules - body - filter table

Fetch Firewall Rules - body - data

Name	Description	Required	Value
format	Desired firewall configuration format. Use "native" to get configuration file in native format.	false	enum
state	Desired firewall configuration state. Use "initial" to get the firewall configuration that existed before Agent installation. (Note: "initial" requires native format).	false	enum

threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer
totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []

windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Fetch Firewall Rules - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
podsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Move to Console

POST /web/api/v2.1/agents/actions/move-to-console

You can move Agents between Management Consoles. This command moves Agents to a target Console, Account, and Site, given the Console URL and Site token.

You must have Global permissions for the source Console and access to the Site token of the target Site.

Resolve all threats on the Agents to move before you run this command.

If the Agents have local configurations, the configurations are maintained.

If the new Management has different blocklists, exclusions, and other assets, these are applied the next time the Agent communicates with the Management.

This command works on these Agent versions: Windows 3.0 and later, macOS 3.0 and later, Linux 3.4 and later.

An Agent tries to connect to the new Management Console for 3 minutes. If the Agent cannot connect (has unresolved threats or other requirements are not met), it stays in the original Management Console.

To get the Site token, run the "sites" command (see Sites list) and take the "registrationToken" value.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permissions to perform the requested action

Response Schema

Name	Description	Required	Value
data	Response data	false	see Move to Console - response - data table
errors	Errors	false	array

Move to Console - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Move to Console - body - data table
filter	Applied filter - only matched Agents will be affected by the requested action. Note: One of these filter arguments must be supplied: ids, groupIds, filterId.	true	see Move to Console - body - filter table

Move to Console - body - data

Name	Description	Required	Value
token	Site token of the site to which the Agent is to be moved. This is a base-64 string that can be copied from the GUI.	true	string

Move to Console - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []

tasksCount	Number of tasks the agent is currently protecting	false	integer

Get Applications

POST /web/api/v2.1/agents/actions/fetch-installed-apps

Application Risk Management is an EA feature. Contact your partner or SentinelOne SE to learn how to join the EA program.

If you have this feature, you can use this command to have all Agents update the data of the applications that are installed on the endpoint. Change the filter parameter values to send this command to matching Agents only. The updated data of installed applications shows on the Console.

Some filter fields are required.

Best practice: Enter all fields in the body. Click in the Body sample to get a copy of the fields in the body form.

BEST PRACTICE

Enter all fields in the body. Click in the Body sample to get a copy of the fields in the body form.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get Applications - response - data table

errors	Errors	false	array
--------	--------	-------	-------

Get Applications - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
filter	Applied filter - only matched Agents will be affected by the requested action. Note: One of these filter arguments must be supplied: ids, groupIds, filterId.	true	see Get Applications - body - filter table
data	Data	false	see Get Applications - body - data table

Get Applications - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
activeProtection	Included agent active protections	false	string []
activeThreats	Include Agents with this amount of active threats	false	integer
activeThreats__gt	Include Agents with at least this amount of active threats	false	integer

ecsServiceArn__contains	Free-text filter by ECS service arn	false	string []
ecsServiceName__contains	Free-text filter by ECS service name	false	string []
ecsTaskArn__contains	Free-text filter by ECS task arn	false	string []
ecsTaskAvailabilityZone__contains	Free-text filter by ECS task availability zone	false	string []
ecsTaskDefinitionArn__contains	Free-text filter by ECS task definition arn	false	string []
ecsTaskDefinitionFamily__contains	Free-text filter by ECS task definition family	false	string []
ecsTaskDefinitionRevision__contains	Free-text filter by ECS task definition revision	false	string []
ecsType__contains	Free-text filter by ECS type	false	string []
ecsVersion__contains	Free-text filter by ECS version	false	string []
encryptedApplications	Disk encryption status	false	boolean []
entraId__contains	Free-text filter by Entra ID (supports multiple values)	false	string []

externalId__contains	Free-text filter by external ID (Customer ID)	false	string []
externalIp__contains	Free-text filter by visible IP (supports multiple values)	false	string []
filteredGroupIds	List of Group IDs to filter by	false	string []
filteredSiteIds	List of Site IDs to filter by	false	string []
filterId	Include all Agents matching this saved filter	false	string
firewallEnabled	The agents supports Firewall Control and it is enabled for the agent's group	false	boolean []
gatewayIp	Gateway ip	false	string
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of network groups	false	string []
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean []
hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
ids	Included Agent IDs	false	string []
idsNin	Excluded Agent IDs	false	string []
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []
isActive	Include only active Agents	false	boolean []
isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []
isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA	false	boolean []

	enabled if True, or not if False		
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []
isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastActiveDate__gt	Agents last active after this time	false	string
lastActiveDate__gte	Agents last active after or at this time	false	string
lastActiveDate__lt	Agents last active before this time	false	string
lastActiveDate__lte	Agents last active before or at this time	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string
lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string

liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []

osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Get Applications - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
podsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Get Applications - body - data

Start Remote Shell

POST /web/api/v2.1/agents/actions/start-remote-shell

Remote shell is an opened websocket between the browser and the Agent, with a proprietary communication protocol that requires an unreasonable effort to run from the API. We recommend that you not use this call.

If you do want to use this API, you must have permission through your user role (not IT or Viewer), specific Remote Shell permissions, 2FA enabled on the username with a valid code in the twoFaCode parameter, valid code in the twoFaCode parameter, and permissions for the Account, Site, or Group on whose policy Remote Shell is enabled. To make sure you have permission to start Remote Shell, use the "can-start-remote-shell" command. Best practice: Use the UUID filter to run Remote Shell on a specific endpoint. To get the UUID, run the "agents" command.

In the body of this command, the data parameter set is mandatory.

Remote Shell requires a Control SKU.

BEST PRACTICE

Use the UUID filter to run Remote Shell on a specific endpoint. To get the UUID, run the "agents" command.

In the body of this command, the data parameter set is mandatory.

Remote Shell requires a Control SKU.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Start Remote Shell - response - data table
errors	Errors	false	array

Start Remote Shell - response - data

Name	Description	Required	Value
agentId	Agent that matched the filter	false	string
channelId	Name of the channel that will be used to communicate with the Agent	false	string
supportsResize	Whether the agent supports terminal resize capability	false	boolean

Body Schema

Name	Description	Required	Value
data	Data	true	see Start Remote Shell - body - data table
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Start Remote Shell - body - filter table

Start Remote Shell - body - data

Name	Description	Required	Value
columns	Number of columns of the console shell	true	integer
rows	Number of rows of the console shell	true	integer
historyPassword	Password to zip the shell history file at end of session	false	string
passwordFromScope	Used to specify execution where a generic password is used	false	see Start Remote Shell - body - passwordFromScope table
twoFaCode	[DEPRECATED] The 2FA code to authenticate the user. Use only if remote_shell_risky_actions GS is disabled.	false	string

userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Start Remote Shell - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
podsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Can run Remote Shell

POST /web/api/v2.1/agents/actions/can-start-remote-shell

Who can run Remote Shell? Remote Shell is a powerful way to respond remotely to events on endpoints. It lets you open full shell capabilities - PowerShell on Windows and Bash on macOS and Linux. To be able to run a Remote Shell session, SentinelOne users require permissions, which are set on different levels. It can be confusing to know who has permission. Use this command to see if a username you created for someone else or the API, or your own name, has permission.

If a user does not have Remote Shell permission, how can you grant it? First, you need the Control SKU. Then, the user must have a role with permission to use Remote Shell: Admin, SOC, IR Team. The IT role does not have Remote Shell permission, and the user must be responsible for the Account, Site, or Group on whose policy Remote Shell is enabled.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

tasksCount	Number of tasks the agent is currently protecting	false	integer

Can run Remote Shell - body - data

Terminate Remote Shell

POST /web/api/v2.1/agents/actions/terminate-remote-shell

Remote Shell is a powerful, full shell for Windows, macOS, and Linux. It is best practice to terminate Remote Shell sessions when they are not in use. A Remote Shell session terminates when the user closes the session, the session times out, or the session is idle longer than the idle-timeout. Use this command terminate a session immediately.

ecsTaskDefinitionFamily__contains	Free-text filter by ECS task definition family	false	string []

ecsTaskDefinitionRevision__contains	Free-text filter by ECS task definition revision	false	string []
ecsType__contains	Free-text filter by ECS type	false	string []
ecsVersion__contains	Free-text filter by ECS version	false	string []
encryptedApplications	Disk encryption status	false	boolean []
entraild__contains	Free-text filter by Entra ID (supports multiple values)	false	string []
externalId__contains	Free-text filter by external ID (Customer ID)	false	string []
externalIp__contains	Free-text filter by visible IP (supports multiple values)	false	string []
filteredGroupIds	List of Group IDs to filter by	false	string []
filteredSiteIds	List of Site IDs to filter by	false	string []
filterId	Include all Agents matching this saved filter	false	string
firewallEnabled	The agents supports Firewall Control and it is enabled for the agent's group	false	boolean []
gatewayIp	Gateway ip	false	string
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of Group IDs to filter by	false	string []
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean []
hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
ids	Included Agent IDs	false	string []
idsNin	Excluded Agent IDs	false	string []
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []
isActive	Include only active Agents	false	boolean []

isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []
isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA enabled if True, or not if False	false	boolean []
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []
isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastActiveDate__gt	Agents last active after this time	false	string
lastActiveDate__gte	Agents last active after or at this time	false	string
lastActiveDate__lt	Agents last active before this time	false	string
lastActiveDate__lte	Agents last active before or at this time	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string

lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string
lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string
liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []

operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []
osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string

remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensics feature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []
scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean

threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer
totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Terminate Remote Shell - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Fetch Firewall Logs

POST /web/api/v2.1/agents/actions/firewall-logging

Get Firewall Control events in the local log file, written in clear text, for Firewall Control events of an endpoint with Firewall Control enabled. Enable the logs for Agents that match the filter.

When Firewall Logging is enabled, you can choose if blocked traffic events go only to a local log on the endpoint (reportMgmt: false, reportLog: true), or also to Console > Activity (reportMgmt: true).

Allowed traffic is not logged.

Each Agent with Firewall Control Event Logging enabled keeps five log files, for a total of 100 MB maximum. The logs cycle older lines to maintain the size threshold.

On Windows endpoints, the Firewall Control logs are in C:\ProgramData\Sentinel\logs\. Search for log files with "visible" in the filename.

On macOS, run: sudo sentinelctl log.

On Linux, run: sudo /opt/sentinelone/bin/sentinelctl log generate /output_path.

Make sure the Group and Site of the Agent has Firewall Control enabled. Firewall Control requires a Control SKU.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Fetch Firewall Logs - response - data table
errors	Errors	false	array

Fetch Firewall Logs - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Fetch Firewall Logs - body - data table
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Fetch Firewall Logs - body - filter table

updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Fetch Firewall Logs - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Randomize UUID

POST /web/api/v2.1/agents/actions/randomize-uuid

IMPORTANT: This action will assign a new UUID to Agents that match the filter.

Run it only when instructed to do so by SentinelOne Support.

If you clone the Agent on a VM or VDI without the /VDI switch, you might need to run this command. It is best to ask for Support assistance. Historical threat and Deep Visibility data will be kept in the Management, but that data will be disassociated from the Agent.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permissions to perform the requested action

cloudAccount__contains	Free-text filter by cloud account (supports multiple values)	false	string []
cloudImage__contains	Free-text filter by cloud image (supports multiple values)	false	string []
cloudInstanceId__contains	Free-text filter by cloud instance id(supports multiple values)	false	string []
cloudInstanceSize__contains	Free-text filter by cloud instance size(supports multiple values)	false	string []
cloudLocation__contains	Free-text filter by cloud location (supports multiple values)	false	string []
cloudNetwork__contains	Free-text filter by cloud network (supports multiple values)	false	string []

cloudProvider	Agents from which cloud provider	false	string []
cloudProviderNin	Exclude Agents from these cloud provider	false	string []
cloudTags__contains	Free-text filter by cloud tags (supports multiple values)	false	string []
clusterName__contains	Free-text filter by cluster name (supports multiple values)	false	string []
computerName	Computer name	false	string
computerName__contains	Free-text filter by computer name (supports multiple values)	false	string []
computerName__like	Match computer name partially (substring)	false	string
computerNameOrUuid__contains	Free-text filter by computer name or uuid (supports multiple values)	false	string []
consoleMigrationStatuses	Migration status in	false	string []
consoleMigrationStatusesNin	Migration status nin	false	string []
containerizedWorkloadCounts	Containerized workload counts	false	see Randomize UUID - body - containerizedWorkloadCounts table
coreCount__between	Possible number of CPU cores (inclusive)	false	string
coreCount__gt	CPU cores (more than)	false	integer
coreCount__gte	CPU cores (more than or equal)	false	integer
coreCount__lt	CPU cores (less than)	false	integer
coreCount__lte	CPU cores (less than or equal)	false	integer
cpuCount__between	Possible number of CPU cores (inclusive)	false	string
cpuCount__gt	Number of CPUs (more than)	false	integer
cpuCount__gte	Number of CPUs (more than or equal)	false	integer
cpuCount__lt	Number of CPUs (less than)	false	integer
cpuCount__lte	Number of CPUs (less than or equal)	false	integer
cpuld__contains	Free-text filter by CPU name (supports multiple values)	false	string []
createdAt__between	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
createdAt__gt	Agents created after this timestamp	false	string

createdAt__gte	Agents created after or at this timestamp	false	string
createdAt__lt	Agents created before this timestamp	false	string
createdAt__lte	Agents created before or at this timestamp	false	string
csvFilterId	The ID of the CSV file to filter by	false	string
decommissionedAt__between	Date range for decommission time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
decommissionedAt__gt	Agents decommissioned after this timestamp	false	string
decommissionedAt__gte	Agents decommissioned after or at this timestamp	false	string
decommissionedAt__lt	Agents decommissioned before this timestamp	false	string
decommissionedAt__lte	Agents decommissioned before this timestamp	false	string
domains	Included network domains	false	string []
domainsNin	Not included network domains	false	string []
ecsClusterName__contains	Free-text filter by ECS cluster name	false	string []
ecsServiceArn__contains	Free-text filter by ECS service arn	false	string []
ecsServiceName__contains	Free-text filter by ECS service name	false	string []
ecsTaskArn__contains	Free-text filter by ECS task arn	false	string []
ecsTaskAvailabilityZone__contains	Free-text filter by ECS task availability zone	false	string []
ecsTaskDefinitionArn__contains	Free-text filter by ECS task definition arn	false	string []
ecsTaskDefinitionFamily__contains	Free-text filter by ECS task definition family	false	string []
ecsTaskDefinitionRevision__contains	Free-text filter by ECS task definition revision	false	string []
ecsType__contains	Free-text filter by ECS type	false	string []
ecsVersion__contains	Free-text filter by ECS version	false	string []
encryptedApplications	Disk encryption status	false	boolean []
entraId__contains	Free-text filter by Entra ID (supports multiple values)	false	string []

externalId__contains	Free-text filter by external ID (Customer ID)	false	string []
externalIp__contains	Free-text filter by visible IP (supports multiple values)	false	string []
filteredGroupIds	List of Group IDs to filter by	false	string []
filteredSiteIds	List of Site IDs to filter by	false	string []
filterId	Include all Agents matching this saved filter	false	string
firewallEnabled	The agents supports Firewall Control and it is enabled for the agent's group	false	boolean []
gatewayIp	Gateway ip	false	string
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of network groups	false	string []
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean []
hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
ids	Included Agent IDs	false	string []
idsNin	Excluded Agent IDs	false	string []
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []
isActive	Include only active Agents	false	boolean []
isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []
isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA	false	boolean []

	enabled if True, or not if False		
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []
isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastActiveDate__gt	Agents last active after this time	false	string
lastActiveDate__gte	Agents last active after or at this time	false	string
lastActiveDate__lt	Agents last active before this time	false	string
lastActiveDate__lte	Agents last active before or at this time	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string
lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string

liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []

osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Randomize UUID - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Randomize UUID - body - data

Mark as up-to-date

POST /web/api/v2.1/agents/actions/mark-up-to-date

The value of the Agent version as "up-to-date" is a useful filter for many actions. There are scenarios where the Management does not recognize a version as latest. For example, if Agents that were sent a new version with the update-software command did not yet report to their Management.

You can manually mark these Agents as up-to-date.

This command is not available to users with the SOC role.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permissions to perform the requested action

Response Schema

Name	Description	Required	Value
data	Response data	false	see Mark as up-to-date - response - data table
errors	Errors	false	array

Mark as up-to-date - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Mark as up-to-date - body - filter table
data	Data	false	see Mark as up-to-date - body - data table

Mark as up-to-date - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
activeProtection	Included agent active protections	false	string []
activeThreats	Include Agents with this amount of active threats	false	integer
activeThreats__gt	Include Agents with at least this amount of active threats	false	integer

threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Mark as up-to-date - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Enable Network Discovery

POST /web/api/v2.1/agents/actions/ranger-enable

Singularity Network Discovery gives full visibility of all devices connected to your network. Network Discovery scans your corporate environment to identify and manage connected devices, even those not protected by or supported by SentinelOne. Use this command to enable Network Discovery on Agents that match the filter. The Agent adds "Scanner" to its functionality.

If the given Agent cannot support Network Discovery, or if Network Discovery is already enabled, this command does nothing.

Network Discovery requires a special license. Consult with your SentinelOne SE.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

tasksCount	Number of tasks the agent is currently protecting	false	integer

Enable Network Discovery - body - data

Disable Network Discovery

POST /web/api/v2.1/agents/actions/ranger-disable

Disable Network Discovery from the Agents that match the filter.
Singularity Network Discovery gives full visibility of all devices connected to your network. Network Discovery scans your corporate environment to identify and manage connected devices, even those not protected by or supported by SentinelOne. When Network Discovery is enabled on an Agent, the Agent adds "Scanner" to its functionality. It is the starting point for the Network Discovery scans.
Best Practice: Disable Network Discovery on endpoints that are performance-sensitive and on endpoints that often connect to non-corporate networks.

BEST PRACTICE
Disable Network Discovery on endpoints that are performance-sensitive and on endpoints that often connect to non-corporate networks.

missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []

osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Disable Network Discovery - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Disable Network Discovery - body - data

Edit local upgrade/downgrade Site authorization

POST /web/api/v2.1/agents/actions/local-upgrade-authorization

Edit when authorization of local upgrades/downgrades expires.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Edit local upgrade/downgrade Site authorization - response - data table
errors	Errors	false	array

Edit local upgrade/downgrade Site authorization - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Edit local upgrade/downgrade Site authorization - body - data table
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Edit local upgrade/downgrade Site authorization - body - filter table

Edit local upgrade/downgrade Site authorization - body - data

Name	Description	Required	Value
agentAuthorization	Agent approval expiration timestamp	true	string

windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Edit local upgrade/downgrade Site authorization - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Reset Passphrases

POST /web/api/v2.1/agents/actions/reset-passphrase

Initiate an Agent passphrase reset for Agents that match the filter.

This action performs eligibility checks (for example: Agent online status, required capabilities, feature toggles, and cooldown period) and returns per-agent results. Historical passphrase records are kept in the Management and are associated with the Agent.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

externalId__contains	Free-text filter by external ID (Customer ID)	false	string []
externalIp__contains	Free-text filter by visible IP (supports multiple values)	false	string []
filteredGroupIds	List of Group IDs to filter by	false	string []
filteredSiteIds	List of Site IDs to filter by	false	string []
filterId	Include all Agents matching this saved filter	false	string
firewallEnabled	The agents supports Firewall Control and it is enabled for the agent's group	false	boolean []
gatewayIp	Gateway ip	false	string
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of network groups	false	string []
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean []
hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
ids	Included Agent IDs	false	string []
idsNin	Excluded Agent IDs	false	string []
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []
isActive	Include only active Agents	false	boolean []
isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []
isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA	false	boolean []

	enabled if True, or not if False		
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []
isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastActiveDate__gt	Agents last active after this time	false	string
lastActiveDate__gte	Agents last active after or at this time	false	string
lastActiveDate__lt	Agents last active before this time	false	string
lastActiveDate__lte	Agents last active before or at this time	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string
lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string

liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []

osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Reset Passphrases - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Reset Passphrases - body - data

Disable Agent

POST /web/api/v2.1/agents/actions/disable-agent

Use this command to disable Agents that match the filter.
Disabled agents run with minimal footprint and do not detect or mitigate threats, but they maintain connectivity with the Management Console.
If the command returns "Insufficient permissions", make sure you have permissions for the Account, Site, or Group and a role that allows Disable Agent (Admin, IR team or IT).
In the body of this command, the data parameter set is mandatory.

Response Messages

- 200 - Success
- 400 - Invalid user input received. See error details for further information.
- 401 - Unauthorized access - please sign in and retry.
- 403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Disable Agent - response - data table
errors	Errors	false	array

Disable Agent - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Disable Agent - body - data table
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Disable Agent - body - filter table

Disable Agent - body - data

Name	Description	Required	Value
shouldReboot	Reboot the endpoint	true	boolean
expiration	Agents will be re-enabled after this timestamp	false	string
expirationTimezone	Timezone for the expiration timestamp	false	string

Disable Agent - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
activeProtection	Included agent active protections	false	string []
activeThreats	Include Agents with this amount of active threats	false	integer

Disable Agent - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Enable Agent

POST /web/api/v2.1/agents/actions/enable-agent

Use this command to enable disabled Agents that match the filter.

If the command returns "Insufficient permissions", make sure you have permissions for the Account, Site, or Group and a role that allows Disable Agent (Admin, IR team or IT).

In the body of this command, the data parameter set is mandatory.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

cloudInstanceId__contains	Free-text filter by cloud instance	false	string []

	id(supports multiple values)		
cloudInstanceSize__contains	Free-text filter by cloud instance size(supports multiple values)	false	string []
cloudLocation__contains	Free-text filter by cloud location (supports multiple values)	false	string []
cloudNetwork__contains	Free-text filter by cloud network (supports multiple values)	false	string []
cloudProvider	Agents from which cloud provider	false	string []
cloudProviderNin	Exclude Agents from these cloud provider	false	string []
cloudTags__contains	Free-text filter by cloud tags (supports multiple values)	false	string []
clusterName__contains	Free-text filter by cluster name (supports multiple values)	false	string []
computerName	Computer name	false	string
computerName__contains	Free-text filter by computer name (supports multiple values)	false	string []
computerName__like	Match computer name partially (substring)	false	string
computerNameOrUuid__contains	Free-text filter by computer name or uuid (supports multiple values)	false	string []
consoleMigrationStatuses	Migration status in	false	string []
consoleMigrationStatusesNin	Migration status nin	false	string []
containerizedWorkloadCounts	Containerized workload counts	false	see Enable Agent - body - containerizedWorkloadCounts table
coreCount__between	Possible number of CPU cores (inclusive)	false	string
coreCount__gt	CPU cores (more than)	false	integer
coreCount__gte	CPU cores (more than or equal)	false	integer
coreCount__lt	CPU cores (less than)	false	integer
coreCount__lte	CPU cores (less than or equal)	false	integer
cpuCount__between	Possible number of CPU cores (inclusive)	false	string
cpuCount__gt	Number of CPUs (more than)	false	integer
cpuCount__gte	Number of CPUs (more than or equal)	false	integer
cpuCount__lt	Number of CPUs (less than)	false	integer

cpuCount__lte	Number of CPUs (less than or equal)	false	integer
cpuld__contains	Free-text filter by CPU name (supports multiple values)	false	string []
createdAt__between	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
createdAt__gt	Agents created after this timestamp	false	string
createdAt__gte	Agents created after or at this timestamp	false	string
createdAt__lt	Agents created before this timestamp	false	string
createdAt__lte	Agents created before or at this timestamp	false	string
csvFilterId	The ID of the CSV file to filter by	false	string
decommissionedAt__between	Date range for decommission time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
decommissionedAt__gt	Agents decommissioned after this timestamp	false	string
decommissionedAt__gte	Agents decommissioned after or at this timestamp	false	string
decommissionedAt__lt	Agents decommissioned before this timestamp	false	string
decommissionedAt__lte	Agents decommissioned before this timestamp	false	string
domains	Included network domains	false	string []
domainsNin	Not included network domains	false	string []
ecsClusterName__contains	Free-text filter by ECS cluster name	false	string []
ecsServiceArn__contains	Free-text filter by ECS service arn	false	string []
ecsServiceName__contains	Free-text filter by ECS service name	false	string []
ecsTaskArn__contains	Free-text filter by ECS task arn	false	string []
ecsTaskAvailabilityZone__contains	Free-text filter by ECS task availability zone	false	string []
ecsTaskDefinitionArn__contains	Free-text filter by ECS task definition arn	false	string []
ecsTaskDefinitionFamily__contains	Free-text filter by ECS task definition family	false	string []

ecsTaskDefinitionRevision__contains	Free-text filter by ECS task definition revision	false	string []
ecsType__contains	Free-text filter by ECS type	false	string []
ecsVersion__contains	Free-text filter by ECS version	false	string []
encryptedApplications	Disk encryption status	false	boolean []
entraild__contains	Free-text filter by Entra ID (supports multiple values)	false	string []
externalId__contains	Free-text filter by external ID (Customer ID)	false	string []
externalIp__contains	Free-text filter by visible IP (supports multiple values)	false	string []
filteredGroupIds	List of Group IDs to filter by	false	string []
filteredSiteIds	List of Site IDs to filter by	false	string []
filterId	Include all Agents matching this saved filter	false	string
firewallEnabled	The agents supports Firewall Control and it is enabled for the agent's group	false	boolean []
gatewayIp	Gateway ip	false	string
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of Group IDs to filter by	false	string []
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean []
hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
ids	Included Agent IDs	false	string []
idsNin	Excluded Agent IDs	false	string []
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []
isActive	Include only active Agents	false	boolean []

isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []
isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA enabled if True, or not if False	false	boolean []
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []
isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastActiveDate__gt	Agents last active after this time	false	string
lastActiveDate__gte	Agents last active after or at this time	false	string
lastActiveDate__lt	Agents last active before this time	false	string
lastActiveDate__lte	Agents last active before or at this time	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string

lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string
lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string
liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []

operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []
osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string

remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []
scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean

threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer
totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Enable Agent - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Start Remote Profiling

POST /web/api/v2.1/agents/actions/start-profiling

Use this command to start remote profiling on Agents that match the filter.

Remote profiling lets you collect runtime diagnostic information for Agents on containers.

If the command returns "Insufficient permissions", make sure you have permissions for the Account, Site, or Group and a role that allows Start Remote Profiling (Admin or IT).

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Start Remote Profiling - response - data table
errors	Errors	false	array

Start Remote Profiling - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Start Remote Profiling - body - filter table
data	Data	false	see Start Remote Profiling - body - data table

Start Remote Profiling - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
activeProtection	Included agent active protections	false	string []
activeThreats	Include Agents with this amount of active threats	false	integer
activeThreats__gt	Include Agents with at least this amount of active threats	false	integer
adComputerMember__contains	Free-text filter by Active Directory computer groups string (supports multiple values)	false	string []
adComputerName__contains	Free-text filter by Active Directory computer name string (supports multiple values)	false	string []
adComputerQuery__contains	Free-text filter by Active Directory computer name or its groups (supports multiple values)	false	string []
adQuery	An Active Directory query string	false	string
adQuery__contains	Free-text filter by Active Directory string (supports multiple values)	false	string []
adUserMember__contains	Free-text filter by Active Directory user groups string (supports multiple values)	false	string []
adUserName__contains	Free-text filter by Active Directory username string (supports multiple values)	false	string []
adUserQuery__contains	Free-text filter by Active Directory computer name or its groups (supports multiple values)	false	string []
agentNamespace__contains	Free-text filter by agent namespace (supports multiple values)	false	string []
agentOperatingMode__contains	Free-text filter by Agent Operating Mode (supports multiple values)	false	string []
agentOperatingModes	Agent operating mode in	false	string []
agentOperatingModesNin	Agent operating mode nin	false	string []

agentPodName__contains	Free-text filter by agent pod name (supports multiple values)	false	string []
agentVersion__between	Version range for agent version (format: <from_version>-<to_version>, inclusive)	false	string
agentVersion__gt	Agents versions greater than given version	false	string
agentVersion__gte	Agents versions greater than or equal to given version	false	string
agentVersion__lt	Agents versions less than given version	false	string
agentVersion__lte	Agents versions less than or equal to given version	false	string
agentVersions	Agent versions to include	false	string []
agentVersionsNin	Agent versions not to include	false	string []
appsVulnerabilityStatuses	Apps vulnerability status in	false	string []
appsVulnerabilityStatusesNin	Apps vulnerability status nin	false	string []
awsRole__contains	Free-text filter by aws role(supports multiple values)	false	string []

uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Start Remote Profiling - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
podsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Start Remote Profiling - body - data

Name	Description	Required	Value
timeout	Profiling will be disabled after that many seconds	false	integer

Stop Remote Profiling

POST /web/api/v2.1/agents/actions/stop-profiling

Use this command to stop remote profiling on Agents that match the filter.

If the command returns "Insufficient permissions", make sure you have permissions for the Account, Site, or Group and a role that allows Stop Remote Profiling (Admin or IT).

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Stop Remote Profiling - response - data table
errors	Errors	false	array

Stop Remote Profiling - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Stop Remote Profiling - body - filter table
data	Data	false	see Stop Remote Profiling - body - data table

Stop Remote Profiling - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
activeProtection	Included agent active protections	false	string []
activeThreats	Include Agents with this amount of active threats	false	integer
activeThreats__gt	Include Agents with at least this amount of active threats	false	integer
adComputerMember__contains	Free-text filter by Active Directory computer groups string (supports multiple values)	false	string []
adComputerName__contains	Free-text filter by Active Directory computer name string (supports multiple values)	false	string []
adComputerQuery__contains	Free-text filter by Active Directory computer name or its groups (supports multiple values)	false	string []
adQuery	An Active Directory query string	false	string

ecsType__contains	Free-text filter by ECS type	false	string []
ecsVersion__contains	Free-text filter by ECS version	false	string []
encryptedApplications	Disk encryption status	false	boolean []
entraId__contains	Free-text filter by Entra ID (supports multiple values)	false	string []

externalId__contains	Free-text filter by external ID (Customer ID)	false	string []
externalIp__contains	Free-text filter by visible IP (supports multiple values)	false	string []
filteredGroupIds	List of Group IDs to filter by	false	string []
filteredSiteIds	List of Site IDs to filter by	false	string []
filterId	Include all Agents matching this saved filter	false	string
firewallEnabled	The agents supports Firewall Control and it is enabled for the agent's group	false	boolean []
gatewayIp	Gateway ip	false	string
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of Group IDs to filter by	false	string []
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean []
hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
ids	Included Agent IDs	false	string []
idsNin	Excluded Agent IDs	false	string []
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []
isActive	Include only active Agents	false	boolean []
isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []
isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA	false	boolean []

	enabled if True, or not if False		
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []
isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastActiveDate__gt	Agents last active after this time	false	string
lastActiveDate__gte	Agents last active after or at this time	false	string
lastActiveDate__lt	Agents last active before this time	false	string
lastActiveDate__lte	Agents last active before or at this time	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string
lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string

liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []

osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Stop Remote Profiling - body - containerizedWorkloadCounts

proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Approve Stateless Upgrades - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
podsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Approve Stateless Upgrades - body - data

Name	Description	Required	Value
expiration	Number of days users are authorized to upgrade Agents	true	integer

Manage endpoint tags: add, remove, override

POST /web/api/v2.1/agents/actions/manage-tags

The "add" operation adds the given tags to the endpoints (if not already present), the "remove" operation removes the given tags from endpoints (if present), and the "override" operation overrides already present tag(s) by the same key of the given tags (if multiple same-key tags are provided, they are preserved).

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Manage endpoint tags: add, remove, override - response - data table
errors	Errors	false	array

Manage endpoint tags: add, remove, override - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Manage endpoint tags: add, remove, override - body - filter table
data	Tags to attach	false	see Manage endpoint tags: add, remove, override - body - data table

Manage endpoint tags: add, remove, override - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
activeProtection	Included agent active protections	false	string []
activeThreats	Include Agents with this amount of active threats	false	integer
activeThreats__gt	Include Agents with at least this amount of active threats	false	integer
adComputerMember__contains	Free-text filter by Active Directory computer groups string (supports multiple values)	false	string []

ecsVersion__contains	Free-text filter by ECS version	false	string []
encryptedApplications	Disk encryption status	false	boolean []
entraId__contains	Free-text filter by Entra ID (supports multiple values)	false	string []

externalId__contains	Free-text filter by external ID (Customer ID)	false	string []
externalIp__contains	Free-text filter by visible IP (supports multiple values)	false	string []
filteredGroupIds	List of Group IDs to filter by	false	string []
filteredSiteIds	List of Site IDs to filter by	false	string []
filterId	Include all Agents matching this saved filter	false	string
firewallEnabled	The agents supports Firewall Control and it is enabled for the agent's group	false	boolean []
gatewayIp	Gateway ip	false	string
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of Group IDs to filter by	false	string []
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean []
hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
ids	Included Agent IDs	false	string []
idsNin	Excluded Agent IDs	false	string []
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []
isActive	Include only active Agents	false	boolean []
isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []
isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA	false	boolean []

	enabled if True, or not if False		
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []
isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastActiveDate__gt	Agents last active after this time	false	string
lastActiveDate__gte	Agents last active after or at this time	false	string
lastActiveDate__lt	Agents last active before this time	false	string
lastActiveDate__lte	Agents last active before or at this time	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string
lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string

liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []

osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Manage endpoint tags: add, remove, override - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Manage endpoint tags: add, remove, override - body - data

Name	Description	Required	Value
operation	Operation to perform on tag	true	enum
tagId	Tag ID	true	string

Agent Support Actions

Clear Remote Shell

POST /web/api/v2.1/agents/actions/clear-remote-shell-session

Remote Shell is a powerful way to respond remotely to events on endpoints. It lets you open full shell capabilities - PowerShell on Windows and Bash on macOS and Linux. For best practices, a Remote Shell session can be terminated in many ways: from the UI, from Agent timeouts, from endpoint or connections issues, and so on. If a shell closes at the same time that an Agent goes offline, Remote Shell status is incorrect on the Management.

Use this command to clear the "open shell" flags on the Management.

The IT user role does not have permissions to run this command.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Clear Remote Shell - response - data table
errors	Errors	false	array

Clear Remote Shell - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Clear Remote Shell - body - filter table
data	Data	false	see Clear Remote Shell - body - data table

hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
ids	Included Agent IDs	false	string []
idsNin	Excluded Agent IDs	false	string []
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []
isActive	Include only active Agents	false	boolean []
isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []
isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA	false	boolean []

	enabled if True, or not if False		
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []
isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastActiveDate__gt	Agents last active after this time	false	string
lastActiveDate__gte	Agents last active after or at this time	false	string
lastActiveDate__lt	Agents last active before this time	false	string
lastActiveDate__lte	Agents last active before or at this time	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string
lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string

liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []

osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Clear Remote Shell - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Agents

Get Agents

GET /web/api/v2.1/agents

Get the Agents, and their data, that match the filter. This command gives the Agent ID, which you can use in other commands. To save the list and data to a CSV file, use "export/agents".

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
activeprotection	optional	Included agent active protections. Example: "edr,idr".
activethreats	optional	Include Agents with this amount of active threats. Example: "3".
activethreats__gt	optional	Include Agents with at least this amount of active threats. Example: "5".
adcomputermember__contains	optional	Free-text filter by Active Directory computer groups string (supports multiple values). Example: "DC=sentinelone".
adcomputername__contains	optional	Free-text filter by Active Directory computer name string (supports multiple values). Example: "DC=sentinelone".
adcomputerquery__contains	optional	Free-text filter by Active Directory computer name or its groups (supports multiple values). Example: "DC=sentinelone,Windows".
adquery	optional	An Active Directory query string. Example: "CN=Managers,DC=sentinelone,DC=com".
adquery__contains	optional	Free-text filter by Active Directory string (supports multiple values). Example: "DC=sentinelone".
adusermember__contains	optional	Free-text filter by Active Directory user groups string (supports multiple values). Example: "DC=sentinelone".
adusername__contains	optional	Free-text filter by Active Directory username string (supports multiple values). Example: "DC=sentinelone".

aduserquery__contains	optional	Free-text filter by Active Directory computer name or its groups (supports multiple values). Example: "DC=sentinelone,John".
agentnamespace__contains	optional	Free-text filter by agent namespace (supports multiple values)
agentoperatingmode__contains	optional	Free-text filter by Agent Operating Mode (supports multiple values)
agentoperatingmodes	optional	Agent operating mode in. Example: "optimized".
agentoperatingmodesnin	optional	Agent operating mode nin. Example: "optimized".
agentpodname__contains	optional	Free-text filter by agent pod name (supports multiple values)
agentversion__between	optional	Version range for agent version (format: <from_version>-<to_version>, inclusive). Example: "2.0.0.0-2.1.5.144".
agentversion__gt	optional	Agents versions greater than given version. Example: "2.5.1.1320".
agentversion__gte	optional	Agents versions greater than or equal to given version. Example: "2.5.1.1320".
agentversion__lt	optional	Agents versions less than given version. Example: "2.5.1.1320".
agentversion__lte	optional	Agents versions less than or equal to given version. Example: "2.5.1.1320".
agentversions	optional	Agent versions to include. Example: "2.0.0.0,2.1.5.144".
agentversionsnin	optional	Agent versions not to include. Example: "2.0.0.0,2.1.5.144".
appsvulnerabilitystatus	optional	Apps vulnerability status in. Example: "patch_required".
appsvulnerabilitystatusnin	optional	Apps vulnerability status nin. Example: "patch_required".
awsrole__contains	optional	Free-text filter by aws role(supports multiple values)
awssecuritygroups__contains	optional	Free-text filter by aws securityGroups(supports multiple values)
awssubnetids__contains	optional	Free-text filter by aws subnet ids (supports multiple values)
azureresourcegroup__contains	optional	Free-text filter by azure resource group(supports multiple values)
cloudaccount__contains	optional	Free-text filter by cloud account (supports multiple values)

cloudimage__contains	optional	Free-text filter by cloud image (supports multiple values)
cloudinstanceid__contains	optional	Free-text filter by cloud instance id(supports multiple values)
cloudinstancesize__contains	optional	Free-text filter by cloud instance size(supports multiple values)
cloudlocation__contains	optional	Free-text filter by cloud location (supports multiple values)
cloudnetwork__contains	optional	Free-text filter by cloud network (supports multiple values)
cloudprovider	optional	Agents from which cloud provider
cloudprovidernin	optional	Exclude Agents from these cloud provider
cloudtags__contains	optional	Free-text filter by cloud tags (supports multiple values)
clustername__contains	optional	Free-text filter by cluster name (supports multiple values)
computername	optional	Computer name. Example: "My Office Desktop".
computername__contains	optional	Free-text filter by computer name (supports multiple values). Example: "john-office,WIN".
computername__like	optional	Match computer name partially (substring). Example: "Lab1".
computernameoruuid__contains	optional	Free-text filter by computer name or uuid (supports multiple values)
consolemigrationstatuses	optional	Migration status in. Example: "N/A".
consolemigrationstatusnin	optional	Migration status nin. Example: "N/A".
containerizedworkloadcounts	optional	Containerized workload counts
corecount__between	optional	Possible number of CPU cores (inclusive). Example: "2-8".
corecount__gt	optional	CPU cores (more than)
corecount__gte	optional	CPU cores (more than or equal)
corecount__lt	optional	CPU cores (less than)
corecount__lte	optional	CPU cores (less than or equal)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cpucount__between	optional	Possible number of CPU cores (inclusive). Example: "2-8".

cpucount__gt	optional	Number of CPUs (more than)
cpucount__gte	optional	Number of CPUs (more than or equal)
cpucount__lt	optional	Number of CPUs (less than)
cpucount__lte	optional	Number of CPUs (less than or equal)
cpuid__contains	optional	Free-text filter by CPU name (supports multiple values). Example: "Intel,AMD".
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdat__gt	optional	Agents created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Agents created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Agents created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Agents created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
csvfilterid	optional	The ID of the CSV file to filter by. Example: "225494730938493804".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
decommissionedat__between	optional	Date range for decommission time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
decommissionedat__gt	optional	Agents decommissioned after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__gte	optional	Agents decommissioned after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__lt	optional	Agents decommissioned before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__lte	optional	Agents decommissioned before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
domains	optional	Included network domains. Example: "mybusiness.net,workgroup".

domainsnin	optional	Not included network domains. Example: "mybusiness.net,workgroup".
ecsclustername__contains	optional	Free-text filter by ECS cluster name
ecsservicearn__contains	optional	Free-text filter by ECS service arn
ecsservicename__contains	optional	Free-text filter by ECS service name
ecstaskarn__contains	optional	Free-text filter by ECS task arn
ecstaskavailabilityzone__contains	optional	Free-text filter by ECS task availability zone
ecstaskdefinitionarn__contains	optional	Free-text filter by ECS task definition arn
ecstaskdefinitionfamily__contains	optional	Free-text filter by ECS task definition family
ecstaskdefinitionrevision__contains	optional	Free-text filter by ECS task definition revision
ecstype__contains	optional	Free-text filter by ECS type
ecsversion__contains	optional	Free-text filter by ECS version
encryptedapplications	optional	Disk encryption status
entraid__contains	optional	Free-text filter by Entra ID (supports multiple values)
externalid__contains	optional	Free-text filter by external ID (Customer ID). Example: "Tag#1 - monitoring,Performance machine".
externalip__contains	optional	Free-text filter by visible IP (supports multiple values). Example: "205,127.0".
filteredgroupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
filteredsiteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
filterid	optional	Include all Agents matching this saved filter. Example: "225494730938493804".
firewallenabled	optional	The agents supports Firewall Control and it is enabled for the agent's group
gatewayip	optional	Gateway ip. Example: "192.168.0.1".

gcp-service-account__contains	optional	Free-text filter by gcp service account (supports multiple values)
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
has-containerized-workload	optional	Indicates whether the agent protects containerized workload at the moment
has-local-configuration	optional	Agent has a local configuration set
has-tags	optional	Include only Agents that have any tags assigned if True, or none if False
ids	optional	Included Agent IDs. Example: "225494730938493804,225494730938493915".
idsnin	optional	Excluded Agent IDs. Example: "225494730938493804,225494730938493915".
infected	optional	Include only Agents with at least one active threat
installertypes	optional	Include only Agents installed with these package types. Example: ".msi".
installertypesnin	optional	Exclude Agents installed with these package types. Example: ".msi".
is-active	optional	Include only active Agents
is-ad-connector	optional	The agents that are ADConnectors if True, or not if False
is-decommissioned	optional	Include active, decommissioned or both. Example: "True,False".
is-event-search-proxy-enabled	optional	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).
is-hyper-automate	optional	The agents has Hyper Automate PNA enabled if True, or not if False
is-mgmt-proxy-enabled	optional	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).
is-pending-uninstall	optional	Include only Agents with pending uninstall requests
is-uninstalled	optional	Include installed, uninstalled or both. Example: "True,False".
is-up-to-date	optional	Include only Agents with updated software
k8s-node-labels__contains	optional	Free-text filter by K8s node labels (supports multiple values)
k8s-node-name__contains	optional	Free-text filter by K8s node name (supports multiple values)
k8s-type__contains	optional	Free-text filter by K8s type(supports multiple values)

k8sversion__contains	optional	Free-text filter by K8s version (supports multiple values)
lastactivatedate__between	optional	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
lastactivatedate__gt	optional	Agents last active after this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__gte	optional	Agents last active after or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__lt	optional	Agents last active before this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__lte	optional	Agents last active before or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastloggedinusername__contains	optional	Free-text filter by username (supports multiple values). Example: "admin,johnd1".
lastsuccessfulscandate__between	optional	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
lastsuccessfulscandate__gt	optional	Agents last successful full disk scan after this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__gte	optional	Agents last successful full disk scan after or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__lt	optional	Agents last successful full disk scan before this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__lte	optional	Agents last successful full disk scan before or at this time. Example: "2018-02-27T04:49:26.257525Z".
limit	optional	Limit number of returned items (1-1000). Example: "10".
liveupdateid__contains	optional	Free-text filter by live update ID (supports multiple values)
locationenabled	optional	The agents supports Location Awareness and it is enabled for the agent's group
locationids	optional	Include only Agents reporting these locations. Example: "225494730938493804,225494730938493915".
locationidsnin	optional	Do not include only Agents reporting these locations. Example: "225494730938493804,225494730938493915".
machinetypes	optional	Included machine types. Example: "laptop,desktop".

machinetypesnin	optional	Not included machine types. Example: "laptop,desktop".
migrationstatus	optional	Migration status. Example: "N/A".
missingpermissions	optional	Included missing permissions. Example: "user_action_needed_bluetooth_per,user_action_needed_fda_helper".
missingpermissionsnin	optional	Excluded missing permissions. Example: "user_action_needed_bluetooth_per,user_action_needed_fda_helper".
mitigationmode	optional	Agent mitigation mode policy. Example: "detect".
mitigationmodesuspicious	optional	Mitigation mode policy for suspicious activity. Example: "detect".
networkinterfacegatewaymacaddress__contains	optional	Free-text filter by Gateway MAC address (supports multiple values). Example: "aa:0f,:41:".
networkinterfaceip__contains	optional	Free-text filter by local IP (supports multiple values). Example: "192,10.0.0".
networkinterfacephysical__contains	optional	Free-text filter by MAC address (supports multiple values). Example: "aa:0f,:41:".
networkquarantineenabled	optional	The agents supports Network Quarantine Control and its enabled for the agent's group
networkstatuses	optional	Included network statuses. Example: "connected,connecting".
networkstatusesnin	optional	Included network statuses. Example: "connected,connecting".
operationalstates	optional	Agent operational state
operationalstatesnin	optional	Do not include these Agent operational states
osarch	optional	OS architecture. Example: "32 bit".
osarches	optional	OS architectures to include. Example: "32 bit,64 bit".
osarchesnin	optional	OS architectures not to include. Example: "32 bit,64 bit".
ostypes	optional	Included OS types. Example: "linux".
ostypesnin	optional	Not included OS types. Example: "linux".
osversion__contains	optional	Free-text filter by OS full name and version (supports multiple values). Example: "Service Pack 1".
pacfileusage	optional	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).

proxymethod	optional	Include only Agents using these proxy methods. Example: "None,Auto,System,User,Custom".
proxymethodnin	optional	Exclude Agents using these proxy methods. Example: "None,Auto,System,User,Custom".
query	optional	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term). Example: "Linux".
rangerstatus	optional	[DEPRECATED] Use rangerStatuses. Example: "NotApplicable".
rangerstatuses	optional	Status of Network Discovery. Example: "NotApplicable".
rangerstatusesnin	optional	Do not include these Network Scanner Statuses. Example: "NotApplicable".
rangerversions	optional	Network Scanner versions to include. Example: "2.0.0.0,2.1.5.144".
rangerversionsnin	optional	Network Scanner versions not to include. Example: "2.0.0.0,2.1.5.144".
registeredat__between	optional	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
registeredat__gt	optional	Agents registered after this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__gte	optional	Agents registered after or at this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__lt	optional	Agents registered before this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__lte	optional	Agents registered before or at this time. Example: "2018-02-27T04:49:26.257525Z".
remoteopsforensicssupported	optional	Include only agents that has Remote Ops Forensicsfeature supported
remoteprofilingsstates	optional	Agent remote profiling state
remoteprofilingsstatesnin	optional	Do not include these Agent remote profiling states
rsolevel	optional	Supported Remote Script Orchestration level. Example: "none".
rsolevels	optional	A list of included rso_levels. Example: "pro,ars".
scanstatus	optional	Scan status. Example: "none".

scanstatuses	optional	Included scan statuses. Example: "started,aborted".
scanstatusesnin	optional	Not included scan statuses. Example: "started,aborted".
serialnumber__contains	optional	Free-text filter by Serial Number (supports multiple values)
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
storagetypes	optional	Included storage types. Example: "NetApp,Dell,S3".
storagetypesnin	optional	Excluded storage types. Example: "NetApp,Dell,S3".
tagsdata	optional	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key. Example: "{"key1": ["value1_1", "value1_2"], "key2__nin": ["value2"]}".
threatcontenthash	optional	Include only Agents that have at least one threat with this content hash. Example: "cf23df2207d99a74fbe169e3eba035e633b65d94".
threatcreatedat__between	optional	Agents with threats reported in a date range (format: <from_timestamp>--<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
threatcreatedat__gt	optional	Agents with threats reported after this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__gte	optional	Agents with threats reported after or at this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__lt	optional	Agents with threats reported before this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__lte	optional	Agents with threats reported before or at this time. Example: "2018-02-27T04:49:26.257525Z".
threathidden	optional	Include only Agents with at least one hidden threat
threatmitigationstatus	optional	Include only Agents that have threats with this mitigation status.

		Example: "mitigated".
threatrebootrequired	optional	Has at least one threat with at least one mitigation action pending reboot to succeed
threatresolved	optional	Include only Agents with at least one resolved threat
totalmemory__between	optional	Total memory range (GB, inclusive). Example: "4-8".
totalmemory__gt	optional	Memory size (MB, more than)
totalmemory__gte	optional	Memory size (MB, more than or equal)
totalmemory__lt	optional	Memory size (MB, less than)
totalmemory__lte	optional	Memory size (MB, less than or equal)
updatedat__between	optional	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
updatedat__gt	optional	Agents updated after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Agents updated after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Agents updated before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Agents updated before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
useractionsneeded	optional	Included pending user actions. Example: "reboot_needed,upgrade_needed".
useractionsneedednin	optional	Excluded pending user actions. Example: "reboot_needed,upgrade_needed".
uuid	optional	Agent's universally unique identifier. Example: "ff819e70af13be381993075eb0ce5f2f6de05be2".
uuid__contains	optional	Free-text filter by Agent UUID (supports multiple values). Example: "e92-01928,b055".
uuids	optional	A list of included UUIDs. Example: "ff819e70af13be381993075eb0ce5f2f6de05b11,ff819e70af13be381993075eb0ce5f2f6de05c22".
windowsosrevision__gte	optional	Agents os revision than or equal to given version

windowsosrevision__lte	optional	Agents os revision lower than or equal to given version
------------------------	----------	---

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Agents - response - pagination table
data	Response data	false	see Get Agents - response - data table
errors	Errors	false	array

Get Agents - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Agents - response - data

Name	Description	Required	Value
accountId	A reference to the containing account	false	string
accountName	Name of the containing account	false	string
activeDirectory	Active Directory data	false	see Get Agents - response - activeDirectory table
activeProtection	A list of agent active protections. List items possible values: "edr, idr".	false	string []
activeThreats	Current number of active threats	false	integer
agentOperatingMode	Agent operating mode: optimized (lightweight agent, e.g. Linux kernel >= 5.8) or standard (runtime agents that are not lightweight agents). Null when not applicable.	false	enum
agentVersion	Agent version	false	string
allowRemoteShell	Agent is capable and policy enabled for remote shell	false	boolean
appsVulnerabilityStatus	Apps vulnerability status	false	enum
cloudProviders	Cloud providers for this agent	false	object
computerName	Computer name	false	string
consoleMigrationStatus	What step the agent is at in the process of migrating to another console, if any	false	enum
containerizedWorkloadCounts	Containerized workload counts	false	see Get Agents - response - containerizedWorkloadCounts table

coreCount	CPU cores	false	integer
cpuCount	Number of CPUs	false	integer
cpuld	CPU model	false	string
createdAt	Created at	false	string
detectionState	Detection State	false	string
domain	Network domain	false	string
encryptedApplications	Disk encryption status	false	boolean
entraId	Entra ID	false	string
externalId	External id set by customer	false	string
externalIp	External IPv4 address	false	string
firewallEnabled	Firewall enabled	false	boolean
firstFullModeTime	Date of the first time the Agent moved to full or slim detection modes	false	string
fullDiskScanLastUpdatedAt	Last time scan status was updated	false	string
groupId	A reference to the containing network group	false	string
groupIp	IP Address subnet	false	string
groupName	Name of the containing network group	false	string
groupUpdatedAt	Group updated at	false	string
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean
id	Agent ID	false	string
infected	Indicates if the Agent has active threats	false	boolean
inRemoteShellSession	Is the Agent in a remote shell session	false	boolean
installerType	Installer package type (file extension)	false	enum
isActive	Indicates if the agent was recently active	false	boolean
isAdConnector	Indicates if the Agent is ADConnector	false	boolean
isDecommissioned	Is Agent decommissioned	false	boolean
isHyperAutomate	Indicates if PNA for Hyper Automate Enabled	false	boolean
isPendingUninstall	Agent with a pending uninstall	false	boolean

	request		
isUninstalled	Indicates if Agent was removed from the device	false	boolean
isUpToDate	Indicates if the agent version is up to date	false	boolean
lastActiveDate	Last active date	false	string
lastIpToMgmt	The last ip used to connect to the Management console	false	string
lastLoggedInUserName	Last logged in user name	false	string
lastSuccessfulScanDate	Last successful full disc scan time	false	string
licenseKey	License key	false	string
locationEnabled	Location enabled	false	boolean
locations	A list of locations reported by the Agent	false	see Get Agents - response - locations table
locationType	Reported location type	false	enum
machineSid	Machine SID of the endpoint	false	string
machineType	Machine type	false	enum
missingPermissions	A list of missing permissions. List items possible values: "user_action_needed_fda, user_action_needed_rs_fda, user_action_needed_fda_helper, user_action_needed_fda_sentinel, user_action_needed_bluetooth_per, user_action_needed_network, user_action_needed_notifications".	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
modelName	Device model	false	string
networkInterfaces	Device's network interfaces	false	see Get Agents - response - networkInterfaces table
networkQuarantineEnabled	Network quarantine enabled	false	boolean
networkStatus	Agent's network connectivity status	false	enum
operationalState	Agent operational state	false	string
operationalStateExpiration	Agent operational state expiration	false	string
osArch	Os arch	false	enum

osName	Os name	false	string
osRevision	Os revision	false	string
osStartTime	Last boot time	false	string
osType	OS type	false	enum
osUsername	Os username	false	string
policyUpdatedAt	Policy updated at	false	string
proxyStates	Proxy state information	false	see Get Agents - response - proxyStates table
rangerStatus	Is Agent disabled as a Network Discovery	false	enum
rangerVersion	The version of Network Discovery	false	string
registeredAt	Time of first registration to management console (similar to createdAt)	false	string
remoteProfilingState	Agent remote profiling state	false	string
remoteProfilingStateExpiration	Agent remote profiling state expiration inseconds	false	string
scanAbortedAt	Abort time of last scan (If applicable)	false	string
scanFinishedAt	Finish time of last scan (If applicable)	false	string
scanStartedAt	Start time of last scan	false	string
scanStatus	Last scan status	false	enum
serialNumber	Serial Number of the endpoint	false	string
showAlertIcon	Show alert icon in agent view and details	false	boolean
siteId	A reference to the containing site	false	string
siteName	Name of the containing site	false	string
storageName	Storage Name	false	string
storageType	Storage Type	false	string
tags	Agent's attached tags	false	see Get Agents - response - tags table
threatRebootRequired	Has at least one threat with at least one mitigation action that is pending reboot to succeed	false	boolean
totalMemory	Memory size (MB)	false	integer
updatedAt	Updated at	false	string
userActionsNeeded	A list of pending user actions. List items possible values: "none,	false	string []

	user_action_needed, reboot_needed, upgrade_needed, incompatible_os, unprotected, rebootless_without_dynamic_detection, extended_exclusions_partially_accepted, reboot_required, pending_deprecation, ne_not_running, ne_cf_not_active, pending_performance_insights".		
uuid	Agent's universally unique identifier	false	string

Get Agents - response - activeDirectory

Name	Description	Required	Value
computerDistinguishedName	Computer distinguished name	false	string
computerMemberOf	Computer member of	false	string []
lastUserDistinguishedName	Last user distinguished name	false	string
lastUserMemberOf	Last user member of	false	string []
mail	Mail	false	string
userPrincipalName	User principal name	false	string

Get Agents - response - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Get Agents - response - locations

Name	Description	Required	Value
id	Location ID	false	string
name	Location name	false	string
scope	Location scope	false	enum

Get Agents - response - networkInterfaces

Name	Description	Required	Value
gatewayIp	The default gateway ip	false	string
gatewayMacAddress	The default gateway mac address	false	string
id	Id	false	string
inet	IPv4 addresses	false	string []
inet6	IPv6 addresses	false	string []
name	Name	false	string
physical	Interface's MAC address	false	string

Get Agents - response - proxyStates

Name	Description	Required	Value
eventSearchAddress	Event Search Proxy Address	false	string
isEventSearchProxyEnabled	Connected to Event Search using a proxy	false	boolean
isMgmtProxyEnabled	Connected to Management Console using a proxy	false	boolean
mgmtProxyAddress	Management Proxy Address	false	string
pacFileUsage	PAC file usage status	false	boolean
proxyMethod	Proxy method	false	string

Get Agents - response - tags

Name	Description	Required	Value
------	-------------	----------	-------

sentinelone	SentinelOne tags section	false	see Get Agents - response - sentinelone table
-------------	--------------------------	-------	---

Get Agents - response - sentinelone

Name	Description	Required	Value
assignedAt	when tag assigned to the agent	false	string
assignedBy	full user name who assigned the tag to the agent	false	string
assignedById	user ID who assigned the tag to the agent	false	string
id	Tag ID	false	string
key	Tag key	false	string
value	Tag value	false	string

Count Agents

GET /web/api/v2.1/agents/count

Get the count of Agents that match a filter. This command is useful to run before you run other commands. You will be able to manage Agent maintenance better if you know how many Agents will get a command that takes time (such as Update Software).

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
activeprotection	optional	Included agent active protections. Example: "edr,idr".
activethreats	optional	Include Agents with this amount of active threats. Example: "3".
activethreats__gt	optional	Include Agents with at least this amount of active threats. Example: "5".
adcomputermember__contains	optional	Free-text filter by Active Directory computer groups string (supports multiple values). Example: "DC=sentinelone".
adcomputername__contains	optional	Free-text filter by Active Directory computer name string (supports multiple values). Example: "DC=sentinelone".
adcomputerquery__contains	optional	Free-text filter by Active Directory computer name or its groups (supports multiple values). Example: "DC=sentinelone,Windows".

adquery	optional	An Active Directory query string. Example: "CN=Managers,DC=sentinelone,DC=com".
adquery__contains	optional	Free-text filter by Active Directory string (supports multiple values). Example: "DC=sentinelone".
adusermember__contains	optional	Free-text filter by Active Directory user groups string (supports multiple values). Example: "DC=sentinelone".
adusername__contains	optional	Free-text filter by Active Directory username string (supports multiple values). Example: "DC=sentinelone".
aduserquery__contains	optional	Free-text filter by Active Directory computer name or its groups (supports multiple values). Example: "DC=sentinelone,John".
agentnamespace__contains	optional	Free-text filter by agent namespace (supports multiple values)
agentoperatingmode__contains	optional	Free-text filter by Agent Operating Mode (supports multiple values)
agentoperatingmodes	optional	Agent operating mode in. Example: "optimized".
agentoperatingmodesnin	optional	Agent operating mode nin. Example: "optimized".
agentpodname__contains	optional	Free-text filter by agent pod name (supports multiple values)
agentversion__between	optional	Version range for agent version (format: <from_version>-<to_version>, inclusive). Example: "2.0.0.0-2.1.5.144".
agentversion__gt	optional	Agents versions greater than given version. Example: "2.5.1.1320".
agentversion__gte	optional	Agents versions greater than or equal to given version. Example: "2.5.1.1320".
agentversion__lt	optional	Agents versions less than given version. Example: "2.5.1.1320".
agentversion__lte	optional	Agents versions less than or equal to given version. Example: "2.5.1.1320".
agentversions	optional	Agent versions to include. Example: "2.0.0.0,2.1.5.144".
agentversionsnin	optional	Agent versions not to include. Example: "2.0.0.0,2.1.5.144".
appsvulnerabilitystatus	optional	Apps vulnerability status in. Example: "patch_required".
appsvulnerabilitystatusnin	optional	Apps vulnerability status nin. Example: "patch_required".
awsrole__contains	optional	Free-text filter by aws role(supports multiple values)

awssecuritygroups__contains	optional	Free-text filter by aws securityGroups(supports multiple values)
awssubnetids__contains	optional	Free-text filter by aws subnet ids (supports multiple values)
azureresourcegroup__contains	optional	Free-text filter by azure resource group(supports multiple values)
cloudaccount__contains	optional	Free-text filter by cloud account (supports multiple values)
cloudimage__contains	optional	Free-text filter by cloud image (supports multiple values)
cloudinstanceid__contains	optional	Free-text filter by cloud instance id(supports multiple values)
cloudinstancesize__contains	optional	Free-text filter by cloud instance size(supports multiple values)
cloudlocation__contains	optional	Free-text filter by cloud location (supports multiple values)
cloudnetwork__contains	optional	Free-text filter by cloud network (supports multiple values)
cloudprovider	optional	Agents from which cloud provider
cloudprovidernin	optional	Exclude Agents from these cloud provider
cloudtags__contains	optional	Free-text filter by cloud tags (supports multiple values)
clustername__contains	optional	Free-text filter by cluster name (supports multiple values)
computername	optional	Computer name. Example: "My Office Desktop".
computername__contains	optional	Free-text filter by computer name (supports multiple values). Example: "john-office,WIN".
computername__like	optional	Match computer name partially (substring). Example: "Lab1".
computernameoruuid__contains	optional	Free-text filter by computer name or uuid (supports multiple values)
consolemigrationstatus	optional	Migration status in. Example: "N/A".
consolemigrationstatusnin	optional	Migration status nin. Example: "N/A".
containerizedworkloadcounts	optional	Containerized workload counts
corecount__between	optional	Possible number of CPU cores (inclusive). Example: "2-8".

corecount__gt	optional	CPU cores (more than)
corecount__gte	optional	CPU cores (more than or equal)
corecount__lt	optional	CPU cores (less than)
corecount__lte	optional	CPU cores (less than or equal)
cpucount__between	optional	Possible number of CPU cores (inclusive). Example: "2-8".
cpucount__gt	optional	Number of CPUs (more than)
cpucount__gte	optional	Number of CPUs (more than or equal)
cpucount__lt	optional	Number of CPUs (less than)
cpucount__lte	optional	Number of CPUs (less than or equal)
cpuid__contains	optional	Free-text filter by CPU name (supports multiple values). Example: "Intel,AMD".
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdat__gt	optional	Agents created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Agents created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Agents created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Agents created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
csvfilterid	optional	The ID of the CSV file to filter by. Example: "225494730938493804".
decommissionedat__between	optional	Date range for decommission time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
decommissionedat__gt	optional	Agents decommissioned after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__gte	optional	Agents decommissioned after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__lt	optional	Agents decommissioned before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__lte	optional	Agents decommissioned before this timestamp. Example:

e		"2018-02-27T04:49:26.257525Z".
domains	optional	Included network domains. Example: "mybusiness.net,workgroup".
domainsnin	optional	Not included network domains. Example: "mybusiness.net,workgroup".
ecsclustername__contains	optional	Free-text filter by ECS cluster name
ecsservicearn__contains	optional	Free-text filter by ECS service arn
ecsservicename__contains	optional	Free-text filter by ECS service name
ecstaskarn__contains	optional	Free-text filter by ECS task arn
ecstaskavailabilityzone__contains	optional	Free-text filter by ECS task availability zone
ecstaskdefinitionarn__contains	optional	Free-text filter by ECS task definition arn
ecstaskdefinitionfamily__contains	optional	Free-text filter by ECS task definition family
ecstaskdefinitionrevision__contains	optional	Free-text filter by ECS task definition revision
ecstype__contains	optional	Free-text filter by ECS type
ecsversion__contains	optional	Free-text filter by ECS version
encryptedapplications	optional	Disk encryption status
entraid__contains	optional	Free-text filter by Entra ID (supports multiple values)
externalid__contains	optional	Free-text filter by external ID (Customer ID). Example: "Tag#1 - monitoring,Performance machine".
externalip__contains	optional	Free-text filter by visible IP (supports multiple values). Example: "205,127.0".
filteredgroupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
filteredsiteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
filterid	optional	Include all Agents matching this saved filter. Example: "225494730938493804".

firewallenabled	optional	The agents supports Firewall Control and it is enabled for the agent's group
gatewayip	optional	Gateway ip. Example: "192.168.0.1".
gcpserviceaccount__contains	optional	Free-text filter by gcp service account (supports multiple values)
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
hascontainerizedworkload	optional	Indicates whether the agent protects containerized workload at the moment
haslocalconfiguration	optional	Agent has a local configuration set
hastags	optional	Include only Agents that have any tags assigned if True, or none if False
ids	optional	Included Agent IDs. Example: "225494730938493804,225494730938493915".
idsnin	optional	Excluded Agent IDs. Example: "225494730938493804,225494730938493915".
infected	optional	Include only Agents with at least one active threat
installertypes	optional	Include only Agents installed with these package types. Example: ".msi".
installertypesnin	optional	Exclude Agents installed with these package types. Example: ".msi".
isactive	optional	Include only active Agents
isadconnector	optional	The agents that are ADConnectors if True, or not if False
isdecommissioned	optional	Include active, decommissioned or both. Example: "True,False".
iseventsearchproxyenabled	optional	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).
ishyperautomate	optional	The agents has Hyper Automate PNA enabled if True, or not if False
ismgmtproxyenabled	optional	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).
ispendinguninstall	optional	Include only Agents with pending uninstall requests
isuninstalled	optional	Include installed, uninstalled or both. Example: "True,False".
isuptodate	optional	Include only Agents with updated software
k8snodelabels__contains	optional	Free-text filter by K8s node labels (supports multiple values)

k8snodename__contains	optional	Free-text filter by K8s node name (supports multiple values)
k8stype__contains	optional	Free-text filter by K8s type(supports multiple values)
k8sversion__contains	optional	Free-text filter by K8s version (supports multiple values)
lastactivatedate__between	optional	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
lastactivatedate__gt	optional	Agents last active after this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__gte	optional	Agents last active after or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__lt	optional	Agents last active before this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__lte	optional	Agents last active before or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastloggedinusername__contains	optional	Free-text filter by username (supports multiple values). Example: "admin,johnd1".
lastsuccessfulscandate__between	optional	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
lastsuccessfulscandate__gt	optional	Agents last successful full disk scan after this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__gte	optional	Agents last successful full disk scan after or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__lt	optional	Agents last successful full disk scan before this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__lte	optional	Agents last successful full disk scan before or at this time. Example: "2018-02-27T04:49:26.257525Z".
liveupdateid__contains	optional	Free-text filter by live update ID (supports multiple values)
locationenabled	optional	The agents supports Location Awareness and it is enabled for the agent's group
locationids	optional	Include only Agents reporting these locations. Example: "225494730938493804,225494730938493915".
locationidsnin	optional	Do not include only Agents reporting these locations. Example: "225494730938493804,225494730938493915".

machinetypes	optional	Included machine types. Example: "laptop,desktop".
machinetypesnin	optional	Not included machine types. Example: "laptop,desktop".
migrationstatus	optional	Migration status. Example: "N/A".
missingpermissions	optional	Included missing permissions. Example: "user_action_needed_bluetooth_per,user_action_needed_fda_helper".
missingpermissionsnin	optional	Excluded missing permissions. Example: "user_action_needed_bluetooth_per,user_action_needed_fda_helper".
mitigationmode	optional	Agent mitigation mode policy. Example: "detect".
mitigationmodesuspicious	optional	Mitigation mode policy for suspicious activity. Example: "detect".
networkinterfacegatewaymacaddress__contains	optional	Free-text filter by Gateway MAC address (supports multiple values). Example: "aa:0f,:41:".
networkinterfaceinet__contains	optional	Free-text filter by local IP (supports multiple values). Example: "192,10.0.0".
networkinterfacephysical__contains	optional	Free-text filter by MAC address (supports multiple values). Example: "aa:0f,:41:".
networkquarantineenabled	optional	The agents supports Network Quarantine Control and its enabled for the agent's group
networkstatuses	optional	Included network statuses. Example: "connected,connecting".
networkstatusesnin	optional	Included network statuses. Example: "connected,connecting".
operationalstates	optional	Agent operational state
operationalstatesnin	optional	Do not include these Agent operational states
osarch	optional	OS architecture. Example: "32 bit".
osarches	optional	OS architectures to include. Example: "32 bit,64 bit".
osarchesnin	optional	OS architectures not to include. Example: "32 bit,64 bit".
ostypes	optional	Included OS types. Example: "linux".
ostypesnin	optional	Not included OS types. Example: "linux".
osversion__contains	optional	Free-text filter by OS full name and version (supports multiple values). Example: "Service Pack 1".
pacfileusage	optional	Include only Agents using PAC file for proxy configuration. Accepts

		true, false, or none (for not reported).
proxymethod	optional	Include only Agents using these proxy methods. Example: "None,Auto,System,User,Custom".
proxymethodnin	optional	Exclude Agents using these proxy methods. Example: "None,Auto,System,User,Custom".
query	optional	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term). Example: "Linux".
rangerstatus	optional	[DEPRECATED] Use rangerStatuses. Example: "NotApplicable".
rangerstatuses	optional	Status of Network Discovery. Example: "NotApplicable".
rangerstatusesnin	optional	Do not include these Network Scanner Statuses. Example: "NotApplicable".
rangerversions	optional	Network Scanner versions to include. Example: "2.0.0.0,2.1.5.144".
rangerversionsnin	optional	Network Scanner versions not to include. Example: "2.0.0.0,2.1.5.144".
registeredat__between	optional	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
registeredat__gt	optional	Agents registered after this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__gte	optional	Agents registered after or at this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__lt	optional	Agents registered before this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__lte	optional	Agents registered before or at this time. Example: "2018-02-27T04:49:26.257525Z".
remoteopsforensicsupported	optional	Include only agents that has Remote Ops Forensicsfeature supported
remoteprofilingsstates	optional	Agent remote profiling state
remoteprofilingsstatesnin	optional	Do not include these Agent remote profiling states
rsolevel	optional	Supported Remote Script Orchestration level. Example: "none".
rsolevels	optional	A list of included rso_levels. Example: "pro,ars".

scanstatus	optional	Scan status. Example: "none".
scanstatuses	optional	Included scan statuses. Example: "started,aborted".
scanstatusesnin	optional	Not included scan statuses. Example: "started,aborted".
serialnumber__contains	optional	Free-text filter by Serial Number (supports multiple values)
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
storagetypes	optional	Included storage types. Example: "NetApp,Dell,S3".
storagetypesnin	optional	Excluded storage types. Example: "NetApp,Dell,S3".
tagsdata	optional	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key. Example: '{"key1": ["value1_1", "value1_2"], "key2__nin": ["value2"]}''.
threatcontenthash	optional	Include only Agents that have at least one threat with this content hash. Example: "cf23df2207d99a74fbe169e3eba035e633b65d94".
threatcreatedat__between	optional	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
threatcreatedat__gt	optional	Agents with threats reported after this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__gte	optional	Agents with threats reported after or at this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__lt	optional	Agents with threats reported before this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__lte	optional	Agents with threats reported before or at this time. Example: "2018-02-27T04:49:26.257525Z".
threathidden	optional	Include only Agents with at least one hidden threat
threatmitigationstatus	optional	Include only Agents that have threats with this mitigation status. Example: "mitigated".
threatrebootrequired	optional	Has at least one threat with at least one mitigation action pending reboot to succeed
threatresolved	optional	Include only Agents with at least one resolved threat
totalmemory__between	optional	Total memory range (GB, inclusive). Example: "4-8".

n		
totalmemory__gt	optional	Memory size (MB, more than)
totalmemory__gte	optional	Memory size (MB, more than or equal)
totalmemory__lt	optional	Memory size (MB, less than)
totalmemory__lte	optional	Memory size (MB, less than or equal)
updatedat__between	optional	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
updatedat__gt	optional	Agents updated after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Agents updated after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Agents updated before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Agents updated before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
useractionsneeded	optional	Included pending user actions. Example: "reboot_needed,upgrade_needed".
useractionsneedednin	optional	Excluded pending user actions. Example: "reboot_needed,upgrade_needed".
uuid	optional	Agent's universally unique identifier. Example: "ff819e70af13be381993075eb0ce5f2f6de05be2".
uuid__contains	optional	Free-text filter by Agent UUID (supports multiple values). Example: "e92-01928,b055".
uuids	optional	A list of included UUIDs. Example: "ff819e70af13be381993075eb0ce5f2f6de05b11,ff819e70af13be381993075eb0ce5f2f6de05c22".
windowsosrevision__gte	optional	Agents os revision than or equal to given version
windowsosrevision__lte	optional	Agents os revision lower than or equal to given version

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Count Agents - response - data table
errors	Errors	false	array

Count Agents - response - data

Name	Description	Required	Value
total	Number of Agents matching the input filter	false	integer

Get Passphrase

GET /web/api/v2.1/agents/passphrases

Show the passphrase for the Agents that match the filter. This is an important command. You need the passphrase for most SentinelCtl commands and for different API commands.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
activeprotection	optional	Included agent active protections. Example: "edr,idr".
activethreats	optional	Include Agents with this amount of active threats. Example: "3".
activethreats__gt	optional	Include Agents with at least this amount of active threats. Example: "5".
adcomputermember__contains	optional	Free-text filter by Active Directory computer groups string (supports multiple values). Example: "DC=sentinelone".
adcomputername__contains	optional	Free-text filter by Active Directory computer name string (supports multiple values). Example: "DC=sentinelone".
adcomputerquery__contains	optional	Free-text filter by Active Directory computer name or its groups (supports multiple values). Example: "DC=sentinelone,Windows".
adquery	optional	An Active Directory query string. Example: "CN=Managers,DC=sentinelone,DC=com".
adquery__contains	optional	Free-text filter by Active Directory string (supports multiple values). Example: "DC=sentinelone".
adusermember__contains	optional	Free-text filter by Active Directory user groups string (supports multiple values). Example: "DC=sentinelone".
adusername__contains	optional	Free-text filter by Active Directory username string (supports multiple values). Example: "DC=sentinelone".

aduserquery__contains	optional	Free-text filter by Active Directory computer name or its groups (supports multiple values). Example: "DC=sentinelone,John".
agentnamespace__contains	optional	Free-text filter by agent namespace (supports multiple values)
agentoperatingmode__contains	optional	Free-text filter by Agent Operating Mode (supports multiple values)
agentoperatingmodes	optional	Agent operating mode in. Example: "optimized".
agentoperatingmodesnin	optional	Agent operating mode nin. Example: "optimized".
agentpodname__contains	optional	Free-text filter by agent pod name (supports multiple values)
agentversion__between	optional	Version range for agent version (format: <from_version>-<to_version>, inclusive). Example: "2.0.0.0-2.1.5.144".
agentversion__gt	optional	Agents versions greater than given version. Example: "2.5.1.1320".
agentversion__gte	optional	Agents versions greater than or equal to given version. Example: "2.5.1.1320".
agentversion__lt	optional	Agents versions less than given version. Example: "2.5.1.1320".
agentversion__lte	optional	Agents versions less than or equal to given version. Example: "2.5.1.1320".
agentversions	optional	Agent versions to include. Example: "2.0.0.0,2.1.5.144".
agentversionsnin	optional	Agent versions not to include. Example: "2.0.0.0,2.1.5.144".
appsvulnerabilitystatuses	optional	Apps vulnerability status in. Example: "patch_required".
appsvulnerabilitystatusnin	optional	Apps vulnerability status nin. Example: "patch_required".
awsrole__contains	optional	Free-text filter by aws role(supports multiple values)
awssecuritygroups__contains	optional	Free-text filter by aws securityGroups(supports multiple values)
awssubnetids__contains	optional	Free-text filter by aws subnet ids (supports multiple values)
azureresourcegroup__contains	optional	Free-text filter by azure resource group(supports multiple values)
cloudaccount__contains	optional	Free-text filter by cloud account (supports multiple values)

cloudimage__contains	optional	Free-text filter by cloud image (supports multiple values)
cloudinstanceid__contains	optional	Free-text filter by cloud instance id(supports multiple values)
cloudinstancesize__contains	optional	Free-text filter by cloud instance size(supports multiple values)
cloudlocation__contains	optional	Free-text filter by cloud location (supports multiple values)
cloudnetwork__contains	optional	Free-text filter by cloud network (supports multiple values)
cloudprovider	optional	Agents from which cloud provider
cloudprovidernin	optional	Exclude Agents from these cloud provider
cloudtags__contains	optional	Free-text filter by cloud tags (supports multiple values)
clustername__contains	optional	Free-text filter by cluster name (supports multiple values)
computername	optional	Computer name. Example: "My Office Desktop".
computername__contains	optional	Free-text filter by computer name (supports multiple values). Example: "john-office,WIN".
computername__like	optional	Match computer name partially (substring). Example: "Lab1".
computernameoruuid__contains	optional	Free-text filter by computer name or uuid (supports multiple values)
consolemigrationstatuses	optional	Migration status in. Example: "N/A".
consolemigrationstatusnin	optional	Migration status nin. Example: "N/A".
containerizedworkloadcounts	optional	Containerized workload counts
corecount__between	optional	Possible number of CPU cores (inclusive). Example: "2-8".
corecount__gt	optional	CPU cores (more than)
corecount__gte	optional	CPU cores (more than or equal)
corecount__lt	optional	CPU cores (less than)
corecount__lte	optional	CPU cores (less than or equal)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cpucount__between	optional	Possible number of CPU cores (inclusive). Example: "2-8".

cpucount__gt	optional	Number of CPUs (more than)
cpucount__gte	optional	Number of CPUs (more than or equal)
cpucount__lt	optional	Number of CPUs (less than)
cpucount__lte	optional	Number of CPUs (less than or equal)
cpuid__contains	optional	Free-text filter by CPU name (supports multiple values). Example: "Intel,AMD".
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdat__gt	optional	Agents created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Agents created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Agents created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Agents created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
csvfilterid	optional	The ID of the CSV file to filter by. Example: "225494730938493804".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
decommissionedat__between	optional	Date range for decommission time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
decommissionedat__gt	optional	Agents decommissioned after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__gte	optional	Agents decommissioned after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__lt	optional	Agents decommissioned before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__lte	optional	Agents decommissioned before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
domains	optional	Included network domains. Example: "mybusiness.net,workgroup".

domainsnin	optional	Not included network domains. Example: "mybusiness.net,workgroup".
ecsclustername__contains	optional	Free-text filter by ECS cluster name
ecsservicearn__contains	optional	Free-text filter by ECS service arn
ecsservicename__contains	optional	Free-text filter by ECS service name
ecstaskarn__contains	optional	Free-text filter by ECS task arn
ecstaskavailabilityzone__contains	optional	Free-text filter by ECS task availability zone
ecstaskdefinitionarn__contains	optional	Free-text filter by ECS task definition arn
ecstaskdefinitionfamily__contains	optional	Free-text filter by ECS task definition family
ecstaskdefinitionrevision__contains	optional	Free-text filter by ECS task definition revision
ecstype__contains	optional	Free-text filter by ECS type
ecsversion__contains	optional	Free-text filter by ECS version
encryptedapplications	optional	Disk encryption status
entraid__contains	optional	Free-text filter by Entra ID (supports multiple values)
externalid__contains	optional	Free-text filter by external ID (Customer ID). Example: "Tag#1 - monitoring,Performance machine".
externalip__contains	optional	Free-text filter by visible IP (supports multiple values). Example: "205,127.0".
filteredgroupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
filteredsiteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
filterid	optional	Include all Agents matching this saved filter. Example: "225494730938493804".
firewallenabled	optional	The agents supports Firewall Control and it is enabled for the agent's group
gatewayip	optional	Gateway ip. Example: "192.168.0.1".

gcpserviceaccount__contains	optional	Free-text filter by gcp service account (supports multiple values)
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
hascontainerizedworkload	optional	Indicates whether the agent protects containerized workload at the moment
haslocalconfiguration	optional	Agent has a local configuration set
hastags	optional	Include only Agents that have any tags assigned if True, or none if False
ids	optional	Included Agent IDs. Example: "225494730938493804,225494730938493915".
idsnin	optional	Excluded Agent IDs. Example: "225494730938493804,225494730938493915".
infected	optional	Include only Agents with at least one active threat
installertypes	optional	Include only Agents installed with these package types. Example: ".msi".
installertypesnin	optional	Exclude Agents installed with these package types. Example: ".msi".
isactive	optional	Include only active Agents
isadconnector	optional	The agents that are ADConnectors if True, or not if False
isdecommissioned	optional	Include active, decommissioned or both. Example: "True,False".
iseventsearchproxyenabled	optional	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).
ishyperautomate	optional	The agents has Hyper Automate PNA enabled if True, or not if False
ismgmtproxyenabled	optional	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).
ispendinguninstall	optional	Include only Agents with pending uninstall requests
isuninstalled	optional	Include installed, uninstalled or both. Example: "True,False".
isuptodate	optional	Include only Agents with updated software
k8snodelabels__contains	optional	Free-text filter by K8s node labels (supports multiple values)
k8snodename__contains	optional	Free-text filter by K8s node name (supports multiple values)
k8stype__contains	optional	Free-text filter by K8s type(supports multiple values)

k8sversion__contains	optional	Free-text filter by K8s version (supports multiple values)
lastactivatedate__between	optional	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
lastactivatedate__gt	optional	Agents last active after this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__gte	optional	Agents last active after or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__lt	optional	Agents last active before this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__lte	optional	Agents last active before or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastloggedinusername__contains	optional	Free-text filter by username (supports multiple values). Example: "admin,johnd1".
lastsuccessfulscandate__between	optional	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
lastsuccessfulscandate__gt	optional	Agents last successful full disk scan after this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__gte	optional	Agents last successful full disk scan after or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__lt	optional	Agents last successful full disk scan before this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__lte	optional	Agents last successful full disk scan before or at this time. Example: "2018-02-27T04:49:26.257525Z".
limit	optional	Limit number of returned items (1-1000). Example: "10".
liveupdateid__contains	optional	Free-text filter by live update ID (supports multiple values)
locationenabled	optional	The agents supports Location Awareness and it is enabled for the agent's group
locationids	optional	Include only Agents reporting these locations. Example: "225494730938493804,225494730938493915".
locationidsnin	optional	Do not include only Agents reporting these locations. Example: "225494730938493804,225494730938493915".
machinetypes	optional	Included machine types. Example: "laptop,desktop".

machinetypesnin	optional	Not included machine types. Example: "laptop,desktop".
migrationstatus	optional	Migration status. Example: "N/A".
missingpermissions	optional	Included missing permissions. Example: "user_action_needed_bluetooth_per,user_action_needed_fda_helper".
missingpermissionsnin	optional	Excluded missing permissions. Example: "user_action_needed_bluetooth_per,user_action_needed_fda_helper".
mitigationmode	optional	Agent mitigation mode policy. Example: "detect".
mitigationmodesuspicious	optional	Mitigation mode policy for suspicious activity. Example: "detect".
networkinterfacegatewaymacaddress__contains	optional	Free-text filter by Gateway MAC address (supports multiple values). Example: "aa:0f,:41:".
networkinterfaceip__contains	optional	Free-text filter by local IP (supports multiple values). Example: "192,10.0.0".
networkinterfacephysical__contains	optional	Free-text filter by MAC address (supports multiple values). Example: "aa:0f,:41:".
networkquarantineenabled	optional	The agents supports Network Quarantine Control and its enabled for the agent's group
networkstatuses	optional	Included network statuses. Example: "connected,connecting".
networkstatusesnin	optional	Included network statuses. Example: "connected,connecting".
operationalstates	optional	Agent operational state
operationalstatesnin	optional	Do not include these Agent operational states
osarch	optional	OS architecture. Example: "32 bit".
osarches	optional	OS architectures to include. Example: "32 bit,64 bit".
osarchesnin	optional	OS architectures not to include. Example: "32 bit,64 bit".
ostypes	optional	Included OS types. Example: "linux".
ostypesnin	optional	Not included OS types. Example: "linux".
osversion__contains	optional	Free-text filter by OS full name and version (supports multiple values). Example: "Service Pack 1".
pacfileusage	optional	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).

proxymethod	optional	Include only Agents using these proxy methods. Example: "None,Auto,System,User,Custom".
proxymethodnin	optional	Exclude Agents using these proxy methods. Example: "None,Auto,System,User,Custom".
query	optional	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term). Example: "Linux".
rangerstatus	optional	[DEPRECATED] Use rangerStatuses. Example: "NotApplicable".
rangerstatuses	optional	Status of Network Discovery. Example: "NotApplicable".
rangerstatusesnin	optional	Do not include these Network Scanner Statuses. Example: "NotApplicable".
rangerversions	optional	Network Scanner versions to include. Example: "2.0.0.0,2.1.5.144".
rangerversionsnin	optional	Network Scanner versions not to include. Example: "2.0.0.0,2.1.5.144".
registeredat__between	optional	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
registeredat__gt	optional	Agents registered after this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__gte	optional	Agents registered after or at this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__lt	optional	Agents registered before this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__lte	optional	Agents registered before or at this time. Example: "2018-02-27T04:49:26.257525Z".
remoteopsforensicssupported	optional	Include only agents that has Remote Ops Forensicsfeature supported
remoteprofilingsstates	optional	Agent remote profiling state
remoteprofilingsstatesnin	optional	Do not include these Agent remote profiling states
rsolevel	optional	Supported Remote Script Orchestration level. Example: "none".
rsolevels	optional	A list of included rso_levels. Example: "pro,ars".
scanstatus	optional	Scan status. Example: "none".

scanstatuses	optional	Included scan statuses. Example: "started,aborted".
scanstatusesnin	optional	Not included scan statuses. Example: "started,aborted".
serialnumber__contains	optional	Free-text filter by Serial Number (supports multiple values)
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
storagetypes	optional	Included storage types. Example: "NetApp,Dell,S3".
storagetypesnin	optional	Excluded storage types. Example: "NetApp,Dell,S3".
tagsdata	optional	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key. Example: '{"key1": ["value1_1", "value1_2"], "key2__nin": ["value2"]}'.
threatcontenthash	optional	Include only Agents that have at least one threat with this content hash. Example: "cf23df2207d99a74fbe169e3eba035e633b65d94".
threatcreatedat__between	optional	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
threatcreatedat__gt	optional	Agents with threats reported after this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__gte	optional	Agents with threats reported after or at this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__lt	optional	Agents with threats reported before this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__lte	optional	Agents with threats reported before or at this time. Example: "2018-02-27T04:49:26.257525Z".
threathidden	optional	Include only Agents with at least one hidden threat
threatmitigationstatus	optional	Include only Agents that have threats with this mitigation status. Example: "mitigated".
threatrebootrequired	optional	Has at least one threat with at least one mitigation action pending reboot to succeed

threatresolved	optional	Include only Agents with at least one resolved threat
totalmemory__between	optional	Total memory range (GB, inclusive). Example: "4-8".
totalmemory__gt	optional	Memory size (MB, more than)
totalmemory__gte	optional	Memory size (MB, more than or equal)
totalmemory__lt	optional	Memory size (MB, less than)
totalmemory__lte	optional	Memory size (MB, less than or equal)
updatedat__between	optional	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
updatedat__gt	optional	Agents updated after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Agents updated after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Agents updated before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Agents updated before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
useractionsneeded	optional	Included pending user actions. Example: "reboot_needed,upgrade_needed".
useractionsneedednin	optional	Excluded pending user actions. Example: "reboot_needed,upgrade_needed".
uuid	optional	Agent's universally unique identifier. Example: "ff819e70af13be381993075eb0ce5f2f6de05be2".
uuid__contains	optional	Free-text filter by Agent UUID (supports multiple values). Example: "e92-01928,b055".
uuids	optional	A list of included UUIDs. Example: "ff819e70af13be381993075eb0ce5f2f6de05b11,ff819e70af13be381993075eb0ce5f2f6de05c22".
windowsosrevision__gte	optional	Agents os revision than or equal to given version
windowsosrevision__lte	optional	Agents os revision lower than or equal to given version

Name	Description	Required	Value
createdAt		false	string
createdByUser		false	string
passphrase	Previous passphrase for the agent	false	string

Export Agent Logs

GET /web/api/v2.1/agents/{agent_id}/uploads/{activity_id}

Get Agent logs from Agents that match the filter. You can filter by Agent ID (run "agents" to get the ID) or by Activity ID (run "activities/types" to get the Activity ID). Send the logs to SentinelOne Support for assistance.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

404 - Agent or activity not found

Applications

GET /web/api/v2.1/agents/applications

Get the installed applications for a specific Agent.
To get the Agent ID, run "agents".

Parameters

ids	required	Agent ID list. Example: "225494730938493804,225494730938493915".
-----	----------	---

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
------	-------------	----------	-------

data	Response data	false	see Applications - response - data table
errors	Errors	false	array

Applications - response - data

Name	Description	Required	Value
installedDate	Installed date	false	string
name	Name	false	string
publisher	Publisher	false	string
size	Size	false	integer
version	Version	false	string

Processes

GET /web/api/v2.1/agents/processes

[OBSOLETE] Returns empty array. To get processes of an Agent, see Applications.

Parameters

ids	required	Agent ID list. Example: "225494730938493804,225494730938493915".
-----	----------	---

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Processes - response - data table
errors	Errors	false	array

Processes - response - data

Name	Description	Required	Value
cpuUsage	CPU Usage (%)	false	integer
executablePath	Executable path	false	string
memoryUsage	Memory usage (MB)	false	integer
pid	Process ID	false	integer
processName	Process name	false	string
startTime	Start time	false	string

Get local upgrade/downgrade Agent authorization

GET /web/api/v2.1/agents/{agent_id}/local-upgrade-authorization

Get the time when authorization of local upgrades/downgrades expires

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get local upgrade/downgrade Agent authorization - response - data table
errors	Errors	false	array

Get local upgrade/downgrade Agent authorization - response - data

Name	Description	Required	Value
agentAuthorization	Agent authorization	false	string
siteAuthorization	Site authorization	false	string

Export Agents

GET /web/api/v2.1/export/agents

Export Agent data to a CSV, for Agents that match the filter. This command exports up to 50000 items (each datum is an item).

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
activeprotection	optional	Included agent active protections. Example: "edr,idr".
activethreats	optional	Include Agents with this amount of active threats. Example: "3".
activethreats__gt	optional	Include Agents with at least this amount of active threats. Example: "5".
adcomputermember__contains	optional	Free-text filter by Active Directory computer groups string (supports multiple values). Example: "DC=sentinelone".
adcomputername__contains	optional	Free-text filter by Active Directory computer name string (supports multiple values). Example: "DC=sentinelone".
adcomputerquery__contains	optional	Free-text filter by Active Directory computer name or its groups (supports multiple values). Example: "DC=sentinelone,Windows".
adquery	optional	An Active Directory query string. Example: "CN=Managers,DC=sentinelone,DC=com".
adquery__contains	optional	Free-text filter by Active Directory string (supports multiple values). Example: "DC=sentinelone".
adusermember__contains	optional	Free-text filter by Active Directory user groups string (supports multiple values). Example: "DC=sentinelone".
adusername__contains	optional	Free-text filter by Active Directory username string (supports multiple values). Example: "DC=sentinelone".

aduserquery__contains	optional	Free-text filter by Active Directory computer name or its groups (supports multiple values). Example: "DC=sentinelone,John".
agentnamespace__contains	optional	Free-text filter by agent namespace (supports multiple values)
agentoperatingmode__contains	optional	Free-text filter by Agent Operating Mode (supports multiple values)
agentoperatingmodes	optional	Agent operating mode in. Example: "optimized".
agentoperatingmodesnin	optional	Agent operating mode nin. Example: "optimized".
agentpodname__contains	optional	Free-text filter by agent pod name (supports multiple values)
agentversion__between	optional	Version range for agent version (format: <from_version>-<to_version>, inclusive). Example: "2.0.0.0-2.1.5.144".
agentversion__gt	optional	Agents versions greater than given version. Example: "2.5.1.1320".
agentversion__gte	optional	Agents versions greater than or equal to given version. Example: "2.5.1.1320".
agentversion__lt	optional	Agents versions less than given version. Example: "2.5.1.1320".
agentversion__lte	optional	Agents versions less than or equal to given version. Example: "2.5.1.1320".
agentversions	optional	Agent versions to include. Example: "2.0.0.0,2.1.5.144".
agentversionsnin	optional	Agent versions not to include. Example: "2.0.0.0,2.1.5.144".
appsvulnerabilitystatuses	optional	Apps vulnerability status in. Example: "patch_required".
appsvulnerabilitystatusnin	optional	Apps vulnerability status nin. Example: "patch_required".
awsrole__contains	optional	Free-text filter by aws role(supports multiple values)
awssecuritygroups__contains	optional	Free-text filter by aws securityGroups(supports multiple values)
awssubnetids__contains	optional	Free-text filter by aws subnet ids (supports multiple values)
azureresourcegroup__contains	optional	Free-text filter by azure resource group(supports multiple values)
cloudaccount__contains	optional	Free-text filter by cloud account (supports multiple values)

cloudimage__contains	optional	Free-text filter by cloud image (supports multiple values)
cloudinstanceid__contains	optional	Free-text filter by cloud instance id(supports multiple values)
cloudinstancesize__contains	optional	Free-text filter by cloud instance size(supports multiple values)
cloudlocation__contains	optional	Free-text filter by cloud location (supports multiple values)
cloudnetwork__contains	optional	Free-text filter by cloud network (supports multiple values)
cloudprovider	optional	Agents from which cloud provider
cloudprovidernin	optional	Exclude Agents from these cloud provider
cloudtags__contains	optional	Free-text filter by cloud tags (supports multiple values)
clustername__contains	optional	Free-text filter by cluster name (supports multiple values)
computername	optional	Computer name. Example: "My Office Desktop".
computername__contains	optional	Free-text filter by computer name (supports multiple values). Example: "john-office,WIN".
computername__like	optional	Match computer name partially (substring). Example: "Lab1".
computernameoruuid__contains	optional	Free-text filter by computer name or uuid (supports multiple values)
consolemigrationstatuses	optional	Migration status in. Example: "N/A".
consolemigrationstatusnin	optional	Migration status nin. Example: "N/A".
containerizedworkloadcounts	optional	Containerized workload counts
corecount__between	optional	Possible number of CPU cores (inclusive). Example: "2-8".
corecount__gt	optional	CPU cores (more than)
corecount__gte	optional	CPU cores (more than or equal)
corecount__lt	optional	CPU cores (less than)
corecount__lte	optional	CPU cores (less than or equal)
cpucount__between	optional	Possible number of CPU cores (inclusive). Example: "2-8".
cpucount__gt	optional	Number of CPUs (more than)

cpucount__gte	optional	Number of CPUs (more than or equal)
cpucount__lt	optional	Number of CPUs (less than)
cpucount__lte	optional	Number of CPUs (less than or equal)
cpuid__contains	optional	Free-text filter by CPU name (supports multiple values). Example: "Intel,AMD".
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdat__gt	optional	Agents created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Agents created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Agents created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Agents created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
csvfilterid	optional	The ID of the CSV file to filter by. Example: "225494730938493804".
decommissionedat__between	optional	Date range for decommission time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
decommissionedat__gt	optional	Agents decommissioned after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__gte	optional	Agents decommissioned after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__lt	optional	Agents decommissioned before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__lte	optional	Agents decommissioned before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
domains	optional	Included network domains. Example: "mybusiness.net,workgroup".
domainsnin	optional	Not included network domains. Example: "mybusiness.net,workgroup".
ecsclustername__contains	optional	Free-text filter by ECS cluster name

ecsservicearn__contains	optional	Free-text filter by ECS service arn
ecsservicename__contains	optional	Free-text filter by ECS service name
ecstaskarn__contains	optional	Free-text filter by ECS task arn
ecstaskavailabilityzone__contains	optional	Free-text filter by ECS task availability zone
ecstaskdefinitionarn__contains	optional	Free-text filter by ECS task definition arn
ecstaskdefinitionfamily__contains	optional	Free-text filter by ECS task definition family
ecstaskdefinitionrevision__contains	optional	Free-text filter by ECS task definition revision
ecstype__contains	optional	Free-text filter by ECS type
ecsversion__contains	optional	Free-text filter by ECS version
encryptedapplications	optional	Disk encryption status
entraid__contains	optional	Free-text filter by Entra ID (supports multiple values)
externalid__contains	optional	Free-text filter by external ID (Customer ID). Example: "Tag#1 - monitoring,Performance machine".
externalip__contains	optional	Free-text filter by visible IP (supports multiple values). Example: "205,127.0".
filteredgroupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
filteredsiteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
filterid	optional	Include all Agents matching this saved filter. Example: "225494730938493804".
firewallenabled	optional	The agents supports Firewall Control and it is enabled for the agent's group
gatewayip	optional	Gateway ip. Example: "192.168.0.1".
gcpserviceaccount__contains	optional	Free-text filter by gcp service account (supports multiple values)
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".

hascontainerizedworkload	optional	Indicates whether the agent protects containerized workload at the moment
haslocalconfiguration	optional	Agent has a local configuration set
hastags	optional	Include only Agents that have any tags assigned if True, or none if False
ids	optional	Included Agent IDs. Example: "225494730938493804,225494730938493915".
idsnin	optional	Excluded Agent IDs. Example: "225494730938493804,225494730938493915".
infected	optional	Include only Agents with at least one active threat
installertypes	optional	Include only Agents installed with these package types. Example: ".msi".
installertypesnin	optional	Exclude Agents installed with these package types. Example: ".msi".
isactive	optional	Include only active Agents
isadconnector	optional	The agents that are ADConnectors if True, or not if False
isdecommissioned	optional	Include active, decommissioned or both. Example: "True,False".
iseventsearchproxyenabled	optional	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).
ishyperautomate	optional	The agents has Hyper Automate PNA enabled if True, or not if False
ismgmtproxyenabled	optional	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).
ispendinguninstall	optional	Include only Agents with pending uninstall requests
isuninstalled	optional	Include installed, uninstalled or both. Example: "True,False".
isuptodate	optional	Include only Agents with updated software
k8snodelabels__contains	optional	Free-text filter by K8s node labels (supports multiple values)
k8snodename__contains	optional	Free-text filter by K8s node name (supports multiple values)
k8stype__contains	optional	Free-text filter by K8s type(supports multiple values)
k8sversion__contains	optional	Free-text filter by K8s version (supports multiple values)
lastactivatedate__between	optional	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".

lastactivatedate__gt	optional	Agents last active after this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__gte	optional	Agents last active after or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__lt	optional	Agents last active before this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__lte	optional	Agents last active before or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastloggedinusername__contains	optional	Free-text filter by username (supports multiple values). Example: "admin,johnd1".
lastsuccessfulscandate__between	optional	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
lastsuccessfulscandate__gt	optional	Agents last successful full disk scan after this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__gte	optional	Agents last successful full disk scan after or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__lt	optional	Agents last successful full disk scan before this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__lte	optional	Agents last successful full disk scan before or at this time. Example: "2018-02-27T04:49:26.257525Z".
liveupdateid__contains	optional	Free-text filter by live update ID (supports multiple values)
locationenabled	optional	The agents supports Location Awareness and it is enabled for the agent's group
locationids	optional	Include only Agents reporting these locations. Example: "225494730938493804,225494730938493915".
locationidsnin	optional	Do not include only Agents reporting these locations. Example: "225494730938493804,225494730938493915".
machinetypes	optional	Included machine types. Example: "laptop,desktop".
machinetypesnin	optional	Not included machine types. Example: "laptop,desktop".
migrationstatus	optional	Migration status. Example: "N/A".
missingpermissions	optional	Included missing permissions. Example: "user_action_needed_bluetooth_per,user_action_needed_fda_helper".

missingpermissionsnin	optional	Excluded missing permissions. Example: "user_action_needed_bluetooth_per,user_action_needed_fda_helper".
mitigationmode	optional	Agent mitigation mode policy. Example: "detect".
mitigationmodesuspicious	optional	Mitigation mode policy for suspicious activity. Example: "detect".
networkinterfacegatewaymacaddress__contains	optional	Free-text filter by Gateway MAC address (supports multiple values). Example: "aa:0f;41:".
networkinterfaceinet__contains	optional	Free-text filter by local IP (supports multiple values). Example: "192,10.0.0".
networkinterfacephysical__contains	optional	Free-text filter by MAC address (supports multiple values). Example: "aa:0f;41:".
networkquarantineenabled	optional	The agents supports Network Quarantine Control and its enabled for the agent's group
networkstatuses	optional	Included network statuses. Example: "connected,connecting".
networkstatusesnin	optional	Included network statuses. Example: "connected,connecting".
operationalstates	optional	Agent operational state
operationalstatesnin	optional	Do not include these Agent operational states
osarch	optional	OS architecture. Example: "32 bit".
osarches	optional	OS architectures to include. Example: "32 bit,64 bit".
osarchesnin	optional	OS architectures not to include. Example: "32 bit,64 bit".
ostypes	optional	Included OS types. Example: "linux".
ostypesnin	optional	Not included OS types. Example: "linux".
osversion__contains	optional	Free-text filter by OS full name and version (supports multiple values). Example: "Service Pack 1".
pacfileusage	optional	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).
proxymethod	optional	Include only Agents using these proxy methods. Example: "None,Auto,System,User,Custom".
proxymethodnin	optional	Exclude Agents using these proxy methods. Example: "None,Auto,System,User,Custom".
query	optional	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they

		start with the search term only (no match if they contain the term). Example: "Linux".
rangerstatus	optional	[DEPRECATED] Use rangerStatuses. Example: "NotApplicable".
rangerstatuses	optional	Status of Network Discovery. Example: "NotApplicable".
rangerstatusesnin	optional	Do not include these Network Scanner Statuses. Example: "NotApplicable".
rangerversions	optional	Network Scanner versions to include. Example: "2.0.0.0,2.1.5.144".
rangerversionsnin	optional	Network Scanner versions not to include. Example: "2.0.0.0,2.1.5.144".
registeredat__between	optional	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
registeredat__gt	optional	Agents registered after this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__gte	optional	Agents registered after or at this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__lt	optional	Agents registered before this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__lte	optional	Agents registered before or at this time. Example: "2018-02-27T04:49:26.257525Z".
remoteopsforensicsupported	optional	Include only agents that has Remote Ops Forensicsfeature supported
remoteprofilingsstates	optional	Agent remote profiling state
remoteprofilingsstatesnin	optional	Do not include these Agent remote profiling states
rsolevel	optional	Supported Remote Script Orchestration level. Example: "none".
rsolevels	optional	A list of included rso_levels. Example: "pro,ars".
scanstatus	optional	Scan status. Example: "none".
scanstatuses	optional	Included scan statuses. Example: "started,aborted".
scanstatusesnin	optional	Not included scan statuses. Example: "started,aborted".
serialnumber__contains	optional	Free-text filter by Serial Number (supports multiple values)
siteids	optional	List of Site IDs to filter by. Example:

		"225494730938493804,225494730938493915".
storagetypes	optional	Included storage types. Example: "NetApp,Dell,S3".
storagetypesnin	optional	Excluded storage types. Example: "NetApp,Dell,S3".
tagsdata	optional	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key. Example: '{"key1": ["value1_1", "value1_2"], "key2__nin": ["value2"]}'.
threatcontenthash	optional	Include only Agents that have at least one threat with this content hash. Example: "cf23df2207d99a74fbe169e3eba035e633b65d94".
threatcreatedat__between	optional	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
threatcreatedat__gt	optional	Agents with threats reported after this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__gte	optional	Agents with threats reported after or at this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__lt	optional	Agents with threats reported before this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__lte	optional	Agents with threats reported before or at this time. Example: "2018-02-27T04:49:26.257525Z".
threathidden	optional	Include only Agents with at least one hidden threat
threatmitigationstatus	optional	Include only Agents that have threats with this mitigation status. Example: "mitigated".
threatrebootrequired	optional	Has at least one threat with at least one mitigation action pending reboot to succeed
threatresolved	optional	Include only Agents with at least one resolved threat
totalmemory__between	optional	Total memory range (GB, inclusive). Example: "4-8".
totalmemory__gt	optional	Memory size (MB, more than)
totalmemory__gte	optional	Memory size (MB, more than or equal)
totalmemory__lt	optional	Memory size (MB, less than)
totalmemory__lte	optional	Memory size (MB, less than or equal)
updatedat__between	optional	Date range for update time (format: <from_timestamp>-

		<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
updatedat__gt	optional	Agents updated after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Agents updated after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Agents updated before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Agents updated before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
useractionsneeded	optional	Included pending user actions. Example: "reboot_needed,upgrade_needed".
useractionsneedednin	optional	Excluded pending user actions. Example: "reboot_needed,upgrade_needed".
uuid	optional	Agent's universally unique identifier. Example: "ff819e70af13be381993075eb0ce5f2f6de05be2".
uuid__contains	optional	Free-text filter by Agent UUID (supports multiple values). Example: "e92-01928,b055".
uuids	optional	A list of included UUIDs. Example: "ff819e70af13be381993075eb0ce5f2f6de05b11,ff819e70af13be381993075eb0ce5f2f6de05c22".
windowsosrevision__gte	optional	Agents os revision than or equal to given version
windowsosrevision__lte	optional	Agents os revision lower than or equal to given version

networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []

osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer

totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Enable Agent PNA for Hyperautomation - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Enable Agent PNA for Hyperautomation - body - data

Disable PNA for Hyperautomation

POST /web/api/v2.1/agents/disable-hyper-automation-pna

Disable Agent PNA for Hyperautomation

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Disable PNA for Hyperautomation - response - data table
errors	Errors	false	array

Disable PNA for Hyperautomation - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
filter	Applied filter - only matched Agents will be affected by the requested action. Leave empty to apply the action on all applicable Agents.	true	see Disable PNA for Hyperautomation - body - filter table
data	Data	false	see Disable PNA for Hyperautomation - body - data table

Disable PNA for Hyperautomation - body - filter

PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Disable PNA for Hyperautomation - body - data

Export Agents - Passphrases

GET /web/api/v2.1/export/agents-passphrases

Export Agent passphrases to a CSV, for Agents that match the filter. This command exports up to 2000 items (each datum is an item).

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
activeprotection	optional	Included agent active protections. Example: "edr,idr".
activethreats	optional	Include Agents with this amount of active threats. Example: "3".
activethreats__gt	optional	Include Agents with at least this amount of active threats. Example: "5".
adcomputermember__contains	optional	Free-text filter by Active Directory computer groups string (supports multiple values). Example: "DC=sentinelone".
adcomputername__contains	optional	Free-text filter by Active Directory computer name string (supports multiple values). Example: "DC=sentinelone".
adcomputerquery__contains	optional	Free-text filter by Active Directory computer name or its groups (supports multiple values). Example: "DC=sentinelone,Windows".
adquery	optional	An Active Directory query string. Example: "CN=Managers,DC=sentinelone,DC=com".
adquery__contains	optional	Free-text filter by Active Directory string (supports multiple values). Example: "DC=sentinelone".
adusermember__contains	optional	Free-text filter by Active Directory user groups string (supports multiple values). Example: "DC=sentinelone".
adusername__contains	optional	Free-text filter by Active Directory username string (supports multiple values). Example: "DC=sentinelone".
aduserquery__contains	optional	Free-text filter by Active Directory computer name or its groups (supports multiple values). Example: "DC=sentinelone,John".
agentnamespace__contains	optional	Free-text filter by agent namespace (supports multiple values)
agentoperatingmode__	optional	Free-text filter by Agent Operating Mode (supports multiple values)

contains		
agentoperatingmodes	optional	Agent operating mode in. Example: "optimized".
agentoperatingmodesnin	optional	Agent operating mode nin. Example: "optimized".
agentpodname__contains	optional	Free-text filter by agent pod name (supports multiple values)
agentversion__between	optional	Version range for agent version (format: <from_version>-<to_version>, inclusive). Example: "2.0.0.0-2.1.5.144".
agentversion__gt	optional	Agents versions greater than given version. Example: "2.5.1.1320".
agentversion__gte	optional	Agents versions greater than or equal to given version. Example: "2.5.1.1320".
agentversion__lt	optional	Agents versions less than given version. Example: "2.5.1.1320".
agentversion__lte	optional	Agents versions less than or equal to given version. Example: "2.5.1.1320".
agentversions	optional	Agent versions to include. Example: "2.0.0.0,2.1.5.144".
agentversionsnin	optional	Agent versions not to include. Example: "2.0.0.0,2.1.5.144".
appsvulnerabilitystatuses	optional	Apps vulnerability status in. Example: "patch_required".
appsvulnerabilitystatusnin	optional	Apps vulnerability status nin. Example: "patch_required".
awsrole__contains	optional	Free-text filter by aws role(supports multiple values)
awssecuritygroups__contains	optional	Free-text filter by aws securityGroups(supports multiple values)
awssubnetids__contains	optional	Free-text filter by aws subnet ids (supports multiple values)
azureresourcegroup__contains	optional	Free-text filter by azure resource group(supports multiple values)
cloudaccount__contains	optional	Free-text filter by cloud account (supports multiple values)
cloudimage__contains	optional	Free-text filter by cloud image (supports multiple values)
cloudinstanceid__contains	optional	Free-text filter by cloud instance id(supports multiple values)
cloudinstancesize__contains	optional	Free-text filter by cloud instance size(supports multiple values)

contains		
cloudlocation__contains	optional	Free-text filter by cloud location (supports multiple values)
cloudnetwork__contains	optional	Free-text filter by cloud network (supports multiple values)
cloudprovider	optional	Agents from which cloud provider
cloudprovidernin	optional	Exclude Agents from these cloud provider
cloudtags__contains	optional	Free-text filter by cloud tags (supports multiple values)
clustername__contains	optional	Free-text filter by cluster name (supports multiple values)
computername	optional	Computer name. Example: "My Office Desktop".
computername__contains	optional	Free-text filter by computer name (supports multiple values). Example: "john-office,WIN".
computername__like	optional	Match computer name partially (substring). Example: "Lab1".
computernameoruuid__contains	optional	Free-text filter by computer name or uuid (supports multiple values)
consolemigrationstatus	optional	Migration status in. Example: "N/A".
consolemigrationstatusnin	optional	Migration status nin. Example: "N/A".
containerizedworkloadcounts	optional	Containerized workload counts
corecount__between	optional	Possible number of CPU cores (inclusive). Example: "2-8".
corecount__gt	optional	CPU cores (more than)
corecount__gte	optional	CPU cores (more than or equal)
corecount__lt	optional	CPU cores (less than)
corecount__lte	optional	CPU cores (less than or equal)
cpucount__between	optional	Possible number of CPU cores (inclusive). Example: "2-8".
cpucount__gt	optional	Number of CPUs (more than)
cpucount__gte	optional	Number of CPUs (more than or equal)
cpucount__lt	optional	Number of CPUs (less than)
cpucount__lte	optional	Number of CPUs (less than or equal)
cpuid__contains	optional	Free-text filter by CPU name (supports multiple values). Example:

		"Intel,AMD".
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdat__gt	optional	Agents created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Agents created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Agents created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Agents created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
csvfilterid	optional	The ID of the CSV file to filter by. Example: "225494730938493804".
decommissionedat__between	optional	Date range for decommission time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
decommissionedat__gt	optional	Agents decommissioned after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__gte	optional	Agents decommissioned after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__lt	optional	Agents decommissioned before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__lte	optional	Agents decommissioned before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
domains	optional	Included network domains. Example: "mybusiness.net,workgroup".
domainsnin	optional	Not included network domains. Example: "mybusiness.net,workgroup".
ecsclustername__contains	optional	Free-text filter by ECS cluster name
ecsservicearn__contains	optional	Free-text filter by ECS service arn
ecsservicename__contains	optional	Free-text filter by ECS service name
ecstaskarn__contains	optional	Free-text filter by ECS task arn

ecstaskavailabilityzone__contains	optional	Free-text filter by ECS task availability zone
ecstaskdefinitionarn__contains	optional	Free-text filter by ECS task definition arn
ecstaskdefinitionfamily__contains	optional	Free-text filter by ECS task definition family
ecstaskdefinitionrevision__contains	optional	Free-text filter by ECS task definition revision
ecstype__contains	optional	Free-text filter by ECS type
ecsversion__contains	optional	Free-text filter by ECS version
encryptedapplications	optional	Disk encryption status
entraid__contains	optional	Free-text filter by Entra ID (supports multiple values)
externalid__contains	optional	Free-text filter by external ID (Customer ID). Example: "Tag#1 - monitoring,Performance machine".
externalip__contains	optional	Free-text filter by visible IP (supports multiple values). Example: "205,127.0".
filteredgroupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
filtersiteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
filterid	optional	Include all Agents matching this saved filter. Example: "225494730938493804".
firewallenabled	optional	The agents supports Firewall Control and it is enabled for the agent's group
gatewayip	optional	Gateway ip. Example: "192.168.0.1".
gcpserviceaccount__contains	optional	Free-text filter by gcp service account (supports multiple values)
groupids	optional	List of network groups. Example: "225494730938493804,225494730938493915".
hascontainerizedworkload	optional	Indicates whether the agent protects containerized workload at the moment
haslocalconfiguration	optional	Agent has a local configuration set
hastags	optional	Include only Agents that have any tags assigned if True, or none if False

ids	optional	Included Agent IDs. Example: "225494730938493804,225494730938493915".
idsnin	optional	Excluded Agent IDs. Example: "225494730938493804,225494730938493915".
infected	optional	Include only Agents with at least one active threat
installertypes	optional	Include only Agents installed with these package types. Example: ".msi".
installertypesnin	optional	Exclude Agents installed with these package types. Example: ".msi".
isactive	optional	Include only active Agents
isadconnector	optional	The agents that are ADConnectors if True, or not if False
isdecommissioned	optional	Include active, decommissioned or both. Example: "True,False".
iseventsearchproxyenabled	optional	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).
ishyperautomate	optional	The agents has Hyper Automate PNA enabled if True, or not if False
ismgmtproxyenabled	optional	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).
ispendinguninstall	optional	Include only Agents with pending uninstall requests
isuninstalled	optional	Include installed, uninstalled or both. Example: "True,False".
isuptodate	optional	Include only Agents with updated software
k8snodelabels__contains	optional	Free-text filter by K8s node labels (supports multiple values)
k8snodename__contains	optional	Free-text filter by K8s node name (supports multiple values)
k8stype__contains	optional	Free-text filter by K8s type(supports multiple values)
k8sversion__contains	optional	Free-text filter by K8s version (supports multiple values)
lastactivatedate__between	optional	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
lastactivatedate__gt	optional	Agents last active after this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__gte	optional	Agents last active after or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__lt	optional	Agents last active before this time. Example:

		"2018-02-27T04:49:26.257525Z".
lastactivedate__lte	optional	Agents last active before or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastloggedinusername__contains	optional	Free-text filter by username (supports multiple values). Example: "admin,johnd1".
lastsuccessfulscandate__between	optional	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
lastsuccessfulscandate__gt	optional	Agents last successful full disk scan after this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__gte	optional	Agents last successful full disk scan after or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__lt	optional	Agents last successful full disk scan before this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__lte	optional	Agents last successful full disk scan before or at this time. Example: "2018-02-27T04:49:26.257525Z".
liveupdateid__contains	optional	Free-text filter by live update ID (supports multiple values)
locationenabled	optional	The agents supports Location Awareness and it is enabled for the agent's group
locationids	optional	Include only Agents reporting these locations. Example: "225494730938493804,225494730938493915".
locationidsnin	optional	Do not include only Agents reporting these locations. Example: "225494730938493804,225494730938493915".
machinetypes	optional	Included machine types. Example: "laptop,desktop".
machinetypesnin	optional	Not included machine types. Example: "laptop,desktop".
migrationstatus	optional	Migration status. Example: "N/A".
missingpermissions	optional	Included missing permissions. Example: "user_action_needed_bluetooth_per,user_action_needed_fda_helper".
missingpermissionsnin	optional	Excluded missing permissions. Example: "user_action_needed_bluetooth_per,user_action_needed_fda_helper".
mitigationmode	optional	Agent mitigation mode policy. Example: "detect".
mitigationmodesuspici	optional	Mitigation mode policy for suspicious activity. Example: "detect".

ous		
networkinterfacegatewaymacaddress__contains	optional	Free-text filter by Gateway MAC address (supports multiple values). Example: "aa:0f,:41:".
networkinterfaceinet__contains	optional	Free-text filter by local IP (supports multiple values). Example: "192,10.0.0".
networkinterfacephysical__contains	optional	Free-text filter by MAC address (supports multiple values). Example: "aa:0f,:41:".
networkquarantineenabled	optional	The agents supports Network Quarantine Control and its enabled for the agent's group
networkstatuses	optional	Included network statuses. Example: "connected,connecting".
networkstatusesnin	optional	Included network statuses. Example: "connected,connecting".
operationalstates	optional	Agent operational state
operationalstatesnin	optional	Do not include these Agent operational states
osarch	optional	OS architecture. Example: "32 bit".
osarches	optional	OS architectures to include. Example: "32 bit,64 bit".
osarchesnin	optional	OS architectures not to include. Example: "32 bit,64 bit".
ostypes	optional	Included OS types. Example: "linux".
ostypesnin	optional	Not included OS types. Example: "linux".
osversion__contains	optional	Free-text filter by OS full name and version (supports multiple values). Example: "Service Pack 1".
pacfileusage	optional	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).
proxymethod	optional	Include only Agents using these proxy methods. Example: "None,Auto,System,User,Custom".
proxymethodnin	optional	Exclude Agents using these proxy methods. Example: "None,Auto,System,User,Custom".
query	optional	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term). Example: "Linux".
rangerstatus	optional	[DEPRECATED] Use rangerStatuses. Example: "NotApplicable".
rangerstatuses	optional	Status of Network Discovery. Example: "NotApplicable".

rangerstatusesnin	optional	Do not include these Network Scanner Statuses. Example: "NotApplicable".
rangerversions	optional	Network Scanner versions to include. Example: "2.0.0.0,2.1.5.144".
rangerversionsnin	optional	Network Scanner versions not to include. Example: "2.0.0.0,2.1.5.144".
registeredat__between	optional	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
registeredat__gt	optional	Agents registered after this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__gte	optional	Agents registered after or at this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__lt	optional	Agents registered before this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__lte	optional	Agents registered before or at this time. Example: "2018-02-27T04:49:26.257525Z".
remoteopsforensicssupported	optional	Include only agents that has Remote Ops Forensicsfeature supported
remoteprofilingsstates	optional	Agent remote profiling state
remoteprofilingsstatesnin	optional	Do not include these Agent remote profiling states
rsolevel	optional	Supported Remote Script Orchestration level. Example: "none".
rsolevels	optional	A list of included rso_levels. Example: "pro,ars".
scanstatus	optional	Scan status. Example: "none".
scanstatuses	optional	Included scan statuses. Example: "started,aborted".
scanstatusesnin	optional	Not included scan statuses. Example: "started,aborted".
serialnumber__contains	optional	Free-text filter by Serial Number (supports multiple values)
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
storagetypes	optional	Included storage types. Example: "NetApp,Dell,S3".
storagetypesnin	optional	Excluded storage types. Example: "NetApp,Dell,S3".
tagsdata	optional	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of

		string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key. Example: '{"key1": ["value1_1", "value1_2"], "key2__nin": ["value2"]}'.
threatcontenthash	optional	Include only Agents that have at least one threat with this content hash. Example: "cf23df2207d99a74fbe169e3eba035e633b65d94".
threatcreatedat__between	optional	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
threatcreatedat__gt	optional	Agents with threats reported after this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__gte	optional	Agents with threats reported after or at this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__lt	optional	Agents with threats reported before this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__lte	optional	Agents with threats reported before or at this time. Example: "2018-02-27T04:49:26.257525Z".
threathidden	optional	Include only Agents with at least one hidden threat
threatmitigationstatus	optional	Include only Agents that have threats with this mitigation status. Example: "mitigated".
threatrebootrequired	optional	Has at least one threat with at least one mitigation action pending reboot to succeed
threatresolved	optional	Include only Agents with at least one resolved threat
totalmemory__between	optional	Total memory range (GB, inclusive). Example: "4-8".
totalmemory__gt	optional	Memory size (MB, more than)
totalmemory__gte	optional	Memory size (MB, more than or equal)
totalmemory__lt	optional	Memory size (MB, less than)
totalmemory__lte	optional	Memory size (MB, less than or equal)
updatedat__between	optional	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
updatedat__gt	optional	Agents updated after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Agents updated after or at this timestamp. Example:

		"2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Agents updated before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Agents updated before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
useractionsneeded	optional	Included pending user actions. Example: "reboot_needed,upgrade_needed".
useractionsneedednin	optional	Excluded pending user actions. Example: "reboot_needed,upgrade_needed".
uuid	optional	Agent's universally unique identifier. Example: "ff819e70af13be381993075eb0ce5f2f6de05be2".
uuid__contains	optional	Free-text filter by Agent UUID (supports multiple values). Example: "e92-01928,b055".
uuids	optional	A list of included UUIDs. Example: "ff819e70af13be381993075eb0ce5f2f6de05b11,ff819e70af13be381993075eb0ce5f2f6de05c22".
windowsosrevision__gte	optional	Agents os revision than or equal to given version
windowsosrevision__lte	optional	Agents os revision lower than or equal to given version

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Export Agents - Light

GET /web/api/v2.1/export/agents-light

Export Agent data to a CSV, for Agents that match the filter. This command exports up to 300000 items (each datum is an item).

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
activeprotection	optional	Included agent active protections. Example: "edr,idr".
activethreats	optional	Include Agents with this amount of active threats. Example: "3".
activethreats__gt	optional	Include Agents with at least this amount of active threats. Example: "5".
adcomputermember__contains	optional	Free-text filter by Active Directory computer groups string (supports multiple values). Example: "DC=sentinelone".
adcomputername__contains	optional	Free-text filter by Active Directory computer name string (supports multiple values). Example: "DC=sentinelone".
adcomputerquery__contains	optional	Free-text filter by Active Directory computer name or its groups (supports multiple values). Example: "DC=sentinelone,Windows".
adquery	optional	An Active Directory query string. Example: "CN=Managers,DC=sentinelone,DC=com".
adquery__contains	optional	Free-text filter by Active Directory string (supports multiple values). Example: "DC=sentinelone".
adusermember__contains	optional	Free-text filter by Active Directory user groups string (supports multiple values). Example: "DC=sentinelone".
adusername__contains	optional	Free-text filter by Active Directory username string (supports multiple values). Example: "DC=sentinelone".
aduserquery__contains	optional	Free-text filter by Active Directory computer name or its groups (supports multiple values). Example: "DC=sentinelone,John".
agentnamespace__contains	optional	Free-text filter by agent namespace (supports multiple values)
agentoperatingmode__contains	optional	Free-text filter by Agent Operating Mode (supports multiple values)
agentoperatingmodes	optional	Agent operating mode in. Example: "optimized".
agentoperatingmodesnin	optional	Agent operating mode nin. Example: "optimized".
agentpodname__contains	optional	Free-text filter by agent pod name (supports multiple values)
agentversion__between	optional	Version range for agent version (format: <from_version>-<to_version>, inclusive). Example: "2.0.0.0-2.1.5.144".

agentversion__gt	optional	Agents versions greater than given version. Example: "2.5.1.1320".
agentversion__gte	optional	Agents versions greater than or equal to given version. Example: "2.5.1.1320".
agentversion__lt	optional	Agents versions less than given version. Example: "2.5.1.1320".
agentversion__lte	optional	Agents versions less than or equal to given version. Example: "2.5.1.1320".
agentversions	optional	Agent versions to include. Example: "2.0.0.0,2.1.5.144".
agentversionsnin	optional	Agent versions not to include. Example: "2.0.0.0,2.1.5.144".
appsvulnerabilitystatus	optional	Apps vulnerability status in. Example: "patch_required".
appsvulnerabilitystatusnin	optional	Apps vulnerability status nin. Example: "patch_required".
awsrole__contains	optional	Free-text filter by aws role(supports multiple values)
awssecuritygroups__contains	optional	Free-text filter by aws securityGroups(supports multiple values)
awssubnetids__contains	optional	Free-text filter by aws subnet ids (supports multiple values)
azureresourcegroup__contains	optional	Free-text filter by azure resource group(supports multiple values)
cloudaccount__contains	optional	Free-text filter by cloud account (supports multiple values)
cloudimage__contains	optional	Free-text filter by cloud image (supports multiple values)
cloudinstanceid__contains	optional	Free-text filter by cloud instance id(supports multiple values)
cloudinstancesize__contains	optional	Free-text filter by cloud instance size(supports multiple values)
cloudlocation__contains	optional	Free-text filter by cloud location (supports multiple values)
cloudnetwork__contains	optional	Free-text filter by cloud network (supports multiple values)
cloudprovider	optional	Agents from which cloud provider
cloudprovidernin	optional	Exclude Agents from these cloud provider
cloudtags__contains	optional	Free-text filter by cloud tags (supports multiple values)

clustername__contains	optional	Free-text filter by cluster name (supports multiple values)
computername	optional	Computer name. Example: "My Office Desktop".
computername__contains	optional	Free-text filter by computer name (supports multiple values). Example: "john-office,WIN".
computername__like	optional	Match computer name partially (substring). Example: "Lab1".
computernameoruuid__contains	optional	Free-text filter by computer name or uuid (supports multiple values)
consolemigrationstatuses	optional	Migration status in. Example: "N/A".
consolemigrationstatusnin	optional	Migration status nin. Example: "N/A".
containerizedworkloadcounts	optional	Containerized workload counts
corecount__between	optional	Possible number of CPU cores (inclusive). Example: "2-8".
corecount__gt	optional	CPU cores (more than)
corecount__gte	optional	CPU cores (more than or equal)
corecount__lt	optional	CPU cores (less than)
corecount__lte	optional	CPU cores (less than or equal)
cpucount__between	optional	Possible number of CPU cores (inclusive). Example: "2-8".
cpucount__gt	optional	Number of CPUs (more than)
cpucount__gte	optional	Number of CPUs (more than or equal)
cpucount__lt	optional	Number of CPUs (less than)
cpucount__lte	optional	Number of CPUs (less than or equal)
cpuid__contains	optional	Free-text filter by CPU name (supports multiple values). Example: "Intel,AMD".
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdat__gt	optional	Agents created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Agents created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Agents created before this timestamp. Example:

		"2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Agents created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
csvfilterid	optional	The ID of the CSV file to filter by. Example: "225494730938493804".
decommissionedat__between	optional	Date range for decommission time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
decommissionedat__gt	optional	Agents decommissioned after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__gte	optional	Agents decommissioned after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__lt	optional	Agents decommissioned before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
decommissionedat__lte	optional	Agents decommissioned before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
domains	optional	Included network domains. Example: "mybusiness.net,workgroup".
domainsnin	optional	Not included network domains. Example: "mybusiness.net,workgroup".
ecsclustername__contains	optional	Free-text filter by ECS cluster name
ecsservicearn__contains	optional	Free-text filter by ECS service arn
ecsservicename__contains	optional	Free-text filter by ECS service name
ecstaskarn__contains	optional	Free-text filter by ECS task arn
ecstaskavailabilityzone__contains	optional	Free-text filter by ECS task availability zone
ecstaskdefinitionarn__contains	optional	Free-text filter by ECS task definition arn
ecstaskdefinitionfamily__contains	optional	Free-text filter by ECS task definition family
ecstaskdefinitionrevision__contains	optional	Free-text filter by ECS task definition revision

ecstype__contains	optional	Free-text filter by ECS type
ecsversion__contains	optional	Free-text filter by ECS version
encryptedapplications	optional	Disk encryption status
entraid__contains	optional	Free-text filter by Entra ID (supports multiple values)
externalid__contains	optional	Free-text filter by external ID (Customer ID). Example: "Tag#1 - monitoring,Performance machine".
externalip__contains	optional	Free-text filter by visible IP (supports multiple values). Example: "205,127.0".
filteredgroupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
filteredsiteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
filterid	optional	Include all Agents matching this saved filter. Example: "225494730938493804".
firewallenabled	optional	The agents supports Firewall Control and it is enabled for the agent's group
gatewayip	optional	Gateway ip. Example: "192.168.0.1".
gcpserviceaccount__contains	optional	Free-text filter by gcp service account (supports multiple values)
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
hascontainerizedworkload	optional	Indicates whether the agent protects containerized workload at the moment
haslocalconfiguration	optional	Agent has a local configuration set
hastags	optional	Include only Agents that have any tags assigned if True, or none if False
ids	optional	Included Agent IDs. Example: "225494730938493804,225494730938493915".
idsnin	optional	Excluded Agent IDs. Example: "225494730938493804,225494730938493915".
infected	optional	Include only Agents with at least one active threat
installertypes	optional	Include only Agents installed with these package types. Example: ".msi".
installertypesnin	optional	Exclude Agents installed with these package types. Example: ".msi".

isactive	optional	Include only active Agents
isadconnector	optional	The agents that are ADConnectors if True, or not if False
isdecommissioned	optional	Include active, decommissioned or both. Example: "True,False".
iseventsearchproxyenabled	optional	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).
ishyperautomate	optional	The agents has Hyper Automate PNA enabled if True, or not if False
ismgmtproxyenabled	optional	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).
ispendinguninstall	optional	Include only Agents with pending uninstall requests
isuninstalled	optional	Include installed, uninstalled or both. Example: "True,False".
isuptodate	optional	Include only Agents with updated software
k8snodelabels__contains	optional	Free-text filter by K8s node labels (supports multiple values)
k8snodename__contains	optional	Free-text filter by K8s node name (supports multiple values)
k8stype__contains	optional	Free-text filter by K8s type(supports multiple values)
k8sversion__contains	optional	Free-text filter by K8s version (supports multiple values)
lastactivatedate__between	optional	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
lastactivatedate__gt	optional	Agents last active after this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__gte	optional	Agents last active after or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__lt	optional	Agents last active before this time. Example: "2018-02-27T04:49:26.257525Z".
lastactivatedate__lte	optional	Agents last active before or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastloggedinusername__contains	optional	Free-text filter by username (supports multiple values). Example: "admin,johnd1".
lastsuccessfulscandate__between	optional	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
lastsuccessfulscandate	optional	Agents last successful full disk scan after this time. Example:

__gt		"2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__gte	optional	Agents last successful full disk scan after or at this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__lt	optional	Agents last successful full disk scan before this time. Example: "2018-02-27T04:49:26.257525Z".
lastsuccessfulscandate__lte	optional	Agents last successful full disk scan before or at this time. Example: "2018-02-27T04:49:26.257525Z".
liveupdateid__contains	optional	Free-text filter by live update ID (supports multiple values)
locationenabled	optional	The agents supports Location Awareness and it is enabled for the agent's group
locationids	optional	Include only Agents reporting these locations. Example: "225494730938493804,225494730938493915".
locationidsnin	optional	Do not include only Agents reporting these locations. Example: "225494730938493804,225494730938493915".
machinetypes	optional	Included machine types. Example: "laptop,desktop".
machinetypesnin	optional	Not included machine types. Example: "laptop,desktop".
migrationstatus	optional	Migration status. Example: "N/A".
missingpermissions	optional	Included missing permissions. Example: "user_action_needed_bluetooth_per,user_action_needed_fda_helper".
missingpermissionsnin	optional	Excluded missing permissions. Example: "user_action_needed_bluetooth_per,user_action_needed_fda_helper".
mitigationmode	optional	Agent mitigation mode policy. Example: "detect".
mitigationmodesuspicious	optional	Mitigation mode policy for suspicious activity. Example: "detect".
networkinterfacegatewaymacaddress__contains	optional	Free-text filter by Gateway MAC address (supports multiple values). Example: "aa:0f,:41:".
networkinterfaceinet__contains	optional	Free-text filter by local IP (supports multiple values). Example: "192,10.0.0".
networkinterfacephysical__contains	optional	Free-text filter by MAC address (supports multiple values). Example: "aa:0f,:41:".
networkquarantineena	optional	The agents supports Network Quarantine Control and its enabled

bled		for the agent's group
networkstatuses	optional	Included network statuses. Example: "connected,connecting".
networkstatusesnin	optional	Included network statuses. Example: "connected,connecting".
operationalstates	optional	Agent operational state
operationalstatesnin	optional	Do not include these Agent operational states
osarch	optional	OS architecture. Example: "32 bit".
osarches	optional	OS architectures to include. Example: "32 bit,64 bit".
osarchesnin	optional	OS architectures not to include. Example: "32 bit,64 bit".
ostypes	optional	Included OS types. Example: "linux".
ostypesnin	optional	Not included OS types. Example: "linux".
osversion__contains	optional	Free-text filter by OS full name and version (supports multiple values). Example: "Service Pack 1".
pacfileusage	optional	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).
proxymethod	optional	Include only Agents using these proxy methods. Example: "None,Auto,System,User,Custom".
proxymethodnin	optional	Exclude Agents using these proxy methods. Example: "None,Auto,System,User,Custom".
query	optional	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term). Example: "Linux".
rangerstatus	optional	[DEPRECATED] Use rangerStatuses. Example: "NotApplicable".
rangerstatuses	optional	Status of Network Discovery. Example: "NotApplicable".
rangerstatusesnin	optional	Do not include these Network Scanner Statuses. Example: "NotApplicable".
rangerversions	optional	Network Scanner versions to include. Example: "2.0.0.0,2.1.5.144".
rangerversionsnin	optional	Network Scanner versions not to include. Example: "2.0.0.0,2.1.5.144".
registeredat__between	optional	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
registeredat__gt	optional	Agents registered after this time. Example:

		"2018-02-27T04:49:26.257525Z".
registeredat__gte	optional	Agents registered after or at this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__lt	optional	Agents registered before this time. Example: "2018-02-27T04:49:26.257525Z".
registeredat__lte	optional	Agents registered before or at this time. Example: "2018-02-27T04:49:26.257525Z".
remoteopsforensicssupported	optional	Include only agents that has Remote Ops Forensicsfeature supported
remoteprofilingsstates	optional	Agent remote profiling state
remoteprofilingsstatesnotin	optional	Do not include these Agent remote profiling states
rsolevel	optional	Supported Remote Script Orchestration level. Example: "none".
rsolevels	optional	A list of included rso_levels. Example: "pro,ars".
scanstatus	optional	Scan status. Example: "none".
scanstatuses	optional	Included scan statuses. Example: "started,aborted".
scanstatusesnotin	optional	Not included scan statuses. Example: "started,aborted".
serialnumber__contains	optional	Free-text filter by Serial Number (supports multiple values)
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
storagetypes	optional	Included storage types. Example: "NetApp,Dell,S3".
storagetypesnotin	optional	Excluded storage types. Example: "NetApp,Dell,S3".
tagsdata	optional	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key. Example: "{"key1": ["value1_1", "value1_2"], "key2__nin": ["value2"]}".
threatcontenthash	optional	Include only Agents that have at least one threat with this content hash. Example: "cf23df2207d99a74fbe169e3eba035e633b65d94".
threatcreatedat__between	optional	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978764288-1514978999999".
threatcreatedat__gt	optional	Agents with threats reported after this time. Example:

		"2018-02-27T04:49:26.257525Z".
threatcreatedat__gte	optional	Agents with threats reported after or at this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__lt	optional	Agents with threats reported before this time. Example: "2018-02-27T04:49:26.257525Z".
threatcreatedat__lte	optional	Agents with threats reported before or at this time. Example: "2018-02-27T04:49:26.257525Z".
threathidden	optional	Include only Agents with at least one hidden threat
threatmitigationstatus	optional	Include only Agents that have threats with this mitigation status. Example: "mitigated".
threatrebootrequired	optional	Has at least one threat with at least one mitigation action pending reboot to succeed
threatresolved	optional	Include only Agents with at least one resolved threat
totalmemory__between	optional	Total memory range (GB, inclusive). Example: "4-8".
totalmemory__gt	optional	Memory size (MB, more than)
totalmemory__gte	optional	Memory size (MB, more than or equal)
totalmemory__lt	optional	Memory size (MB, less than)
totalmemory__lte	optional	Memory size (MB, less than or equal)
updatedat__between	optional	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
updatedat__gt	optional	Agents updated after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Agents updated after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Agents updated before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Agents updated before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
useractionsneeded	optional	Included pending user actions. Example: "reboot_needed,upgrade_needed".
useractionsneedednin	optional	Excluded pending user actions. Example: "reboot_needed,upgrade_needed".

uuid	optional	Agent's universally unique identifier. Example: "ff819e70af13be381993075eb0ce5f2f6de05be2".
uuid__contains	optional	Free-text filter by Agent UUID (supports multiple values). Example: "e92-01928,b055".
uuids	optional	A list of included UUIDs. Example: "ff819e70af13be381993075eb0ce5f2f6de05b11,ff819e70af13be381993075eb0ce5f2f6de05c22".
windowsosrevision__gte	optional	Agents os revision than or equal to given version
windowsosrevision__lte	optional	Agents os revision lower than or equal to given version

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Get the endpoint tags that match the filters.

GET /web/api/v2.1/agents/tags

Get endpoint Tags.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdby	optional	Created by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
description	optional	Tag description

groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of tag IDs to filter by. Example: "225494730938493804,225494730938493915".
includechildren	optional	Return tags from children scope levels
includeendpointcounters	optional	Include endpoint counters
includeexclusioncounters	optional	Include exclusion counters
includeparents	optional	Return tags from parent scope levels
isdecommissioned	optional	Filter endpoint counts by decommissioned status: [False] for active only, [True] for decommissioned only, [True, False] for both. Example: "True,False".
isuninstalled	optional	Filter endpoint counts by uninstalled status: [False] for installed only, [True] for uninstalled only, [True, False] for both. Example: "True,False".
key	optional	Tag key
key__contains	optional	Free-text filter by tag key. Example: "server".
limit	optional	Limit number of returned items (1-1000). Example: "10".
query	optional	Free text search on fields key, value, description
scopepath	optional	Scope path
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
updatedby	optional	Updated by
value	optional	Tag value
value__contains	optional	Free-text filter by tag value. Example: "server".

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get the endpoint tags that match the filters. - response - pagination table
data	Response data	false	see Get the endpoint tags that match the filters. - response - data table
errors	Errors	false	array

Get the endpoint tags that match the filters. - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get the endpoint tags that match the filters. - response - data

Name	Description	Required	Value
allowEdit	indicate if user can/cant edit the tag	false	boolean
createdAt	Timestamp of creation	false	string
createdBy	Tag creator name	false	string
description	Tag description	false	string
endpointsInCurrentScope	The number of endpoints in this scope that have this tag (not present if includeEndpointCounters=false)	false	integer
id	Tag ID	false	string
key	Tag key	false	string
scopeId	Scope id	false	string
scopeLevel	Scope level	false	enum
scopePath	tag scope path	false	string
totalEndpoints	The total number of endpoints that have this tag (not present if includeEndpointCounters=false)	false	integer
totalExclusions	Number of exclusions with this tag.	false	integer
type	Tag type	false	string
updatedAt	Timestamp of last update	false	string
updatedBy	Tag updater name	false	string

value	tag value	false	string
-------	-----------	-------	--------

Endpoint tags count by Filters

GET /web/api/v2.1/agents/tags/filters-count

Get endpoint Tags filter counts.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
createdby	optional	Created by
description	optional	Tag description
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of tag IDs to filter by. Example: "225494730938493804,225494730938493915".
includechildren	optional	Return tags from children scope levels
includeparents	optional	Return tags from parent scope levels
key	optional	Tag key
key__contains	optional	Free-text filter by tag key. Example: "server".
query	optional	Free text search on fields key, value, description
scopepath	optional	Scope path
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
updatedby	optional	Updated by
value	optional	Tag value
value__contains	optional	Free-text filter by tag value. Example: "server".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Endpoint tags count by Filters - response - data table
errors	Errors	false	array

Endpoint tags count by Filters - response - data

Name	Description	Required	Value
disableSorting	A flag to disable the UI filter values sorting by counts, and instead display values in the provided order.	false	boolean
enableNegation	This flag indicates whether the negation query is enabled for this filter key or not	false	boolean
hiddenFilter	This flag indicates whether the filter is hidden in the UI filters but it may remain for grouping.	false	boolean
hiddenGroupBy	This flag indicates whether the filter is hidden in the UI group by but it may remain for filtering.	false	boolean
key	Filter argument key	false	string
title	Filter description	false	string
type	Filter type	false	string
values	A list of filter values with their count	false	see Endpoint tags count by Filters - response - values table

Endpoint tags count by Filters - response - values

Name	Description	Required	Value
count	Number of entities matching this value	false	integer
title	Value description	false	string
value	Value	false	string

Agents Repository (Beta)

List Access Tokens

GET /web/api/v2.1/agent-artifacts/token

Lists valid access tokens for the S1 Agent Artifacts Repository, with the option to filter by scope

Parameters

limit	optional	The number of tokens to return, for example: '10'. Optional
offset	optional	The number of tokens to skip before starting to collect the result, for example: '2'. Optional
scope_id	optional	Scope id to list the tokens for, example: '983604236220743370'
scope_level	optional	Scope level to list the tokens for. Possible values: 'site', 'account', 'tenant'

Response Messages

200 - OK

400 - Invalid request

401 - Unauthorized

500 - Internal error

Response Schema

Name	Description	Required	Value
data	List of existing tokens	false	undefined []
pagination	Pagination information	false	

Create Access Token

POST /web/api/v2.1/agent-artifacts/token

Creates an access token for the S1 Agent Artifacts Repository, which is needed for pulling artifacts

Response Messages

200 - OK

400 - Invalid request

401 - Unauthorized

500 - Internal Error

Response Schema

Name	Description	Required	Value
created_at	Created At timestamp of the token	false	string
description	Token description	false	string
id	Access token ID	false	integer
scope_id	Scope ID	false	string
scope_level	Scope level of the token	false	string
title	Token name	false	string
token	Access token - seen only once	false	string
username	Username of the token	false	string

Body Schema

Name	Description	Required	Value
description	Token description	false	string
scope_id	Scope ID of the specified account or site	false	string
scope_level	Scope Level of the token e.g. `account`, `site`	false	string
title	Token title	false	string

Delete Access Token

DELETE /web/api/v2.1/agent-artifacts/token

Deletes an access token for the S1 Agent Artifacts Repository

Parameters

scope_id	optional	Scope id to list the tokens for, example: '983604236220743370'
scope_level	optional	Scope level to list the tokens for. Possible values: 'site', 'account'
token_id	optional	token id of the token to be deleted, example: '42'

Response Messages

200 - Token deleted

400 - Invalid request

401 - Unauthorized

404 - Not found

500 - Internal error

Alerts

Get alerts

GET /web/api/v2.1/cloud-detection/alerts

Get a list of alerts for a given scope

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
------------	----------	---

analystverdict	optional	Filter threats by a analyst verdict. Example: "TRUE_POSITIVE".
containerimagename__contains	optional	Free-text filter by the endpoint container image name (supports multiple values)
containerlabels__contains	optional	Free-text filter by the endpoint container labels (supports multiple values)
containername__contains	optional	Free-text filter by the endpoint container name (supports multiple values)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__gt	optional	Created at greater than. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Created at greater or equal than. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Created at lesser than. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Created at lesser or equal than. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
disablepagination	optional	If true, all rules for requested scope will be returned
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	A list of Alert IDs. Example: "225494730938493804,225494730938493915".
incidentstatus	optional	Filter threats by a incident status. Example: "IN_PROGRESS".
k8scluster__contains	optional	Free-text filter by the endpoint Kubernetes cluster name (supports multiple values)
k8scontrollerlabels__contains	optional	Free-text filter by the endpoint Kubernetes controller labels (supports multiple values)
k8scontrollername__contains	optional	Free-text filter by the endpoint Kubernetes controller name (supports multiple values)
k8snamespacelabels__contains	optional	Free-text filter by the endpoint Kubernetes namespace labels (supports multiple values)
k8snamespace__contains	optional	Free-text filter by the endpoint Kubernetes namespace name

contains		(supports multiple values)
k8snode__contains	optional	Free-text filter by the endpoint Kubernetes node name (supports multiple values)
k8spod__contains	optional	Free-text filter by the endpoint Kubernetes pod name (supports multiple values)
k8spodlabels__contains	optional	Free-text filter by the endpoint Kubernetes pod labels (supports multiple values)
limit	optional	Limit number of returned items (1-1000). Example: "10".
machinetype	optional	agent machine type
origagentname__contains	optional	Free-text filter by agent name. Example: "ilia".
origagentosrevision__contains	optional	Free-text filter by agent OS revision. Example: "win7".
origagentuuid__contains	optional	Free-text filter by agent UUID. Example: "win7".
origagentversion__contains	optional	Free-text filter by agent OS version. Example: "7.11".
ostype	optional	Included OS types
query	optional	Full text search for all fields
reportedat__gt	optional	Reported at greater than. Example: "2018-02-27T04:49:26.257525Z".
reportedat__gte	optional	Reported at greater or equal than. Example: "2018-02-27T04:49:26.257525Z".
reportedat__lt	optional	Reported at lesser than. Example: "2018-02-27T04:49:26.257525Z".
reportedat__lte	optional	Reported at lesser or equal than. Example: "2018-02-27T04:49:26.257525Z".
rulename__contains	optional	Free-text filter by rule name. Example: "rule1".
scopes	optional	Filter results by scope. Example: "group".
severity	optional	Severity. Example: "Low".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000

		items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
sourceprocesscommandline__contains	optional	Free-text filter by source commandline. Example: "rule1".
sourceprocessfilehashmd5__contains	optional	Free-text filter by source md5. Example: "rule1".
sourceprocessfilehashsha1__contains	optional	Free-text filter by source sha1. Example: "rule1".
sourceprocessfilehashsha256__contains	optional	Free-text filter by source sha256. Example: "rule1".
sourceprocessfilepath__contains	optional	Free-text filter by source file path. Example: "rule1".
sourceprocessname__contains	optional	Free-text filter by source process name. Example: "proc1.exe".
sourceprocessstoryline__contains	optional	Free-text filter by source storyline. Example: "rule1".
tenant	optional	Indicates a tenant scope request

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get alerts - response - pagination table
data	Response data	false	see Get alerts - response - data table
errors	Errors	false	array

Get alerts - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get alerts - response - data

Name	Description	Required	Value
agentDetectionInfo	Agent detection time information	false	see Get alerts - response - agentDetectionInfo table
alertInfo	Alert information	false	see Get alerts - response - alertInfo table
containerInfo	Alert container information	false	see Get alerts - response - containerInfo table
kubernetesInfo	Alert kubernetes information	false	see Get alerts - response - kubernetesInfo table
ruleInfo	Custom Detection rules like STAR indicators information	false	see Get alerts - response - ruleInfo table
sourceParentProcessInfo	Source parent process info	false	see Get alerts - response - sourceParentProcessInfo table
sourceProcessInfo	Source process info	false	see Get alerts - response - sourceProcessInfo table
targetProcessInfo	Target process info	false	see Get alerts - response - targetProcessInfo table

Get alerts - response - agentDetectionInfo

Name	Description	Required	Value
accountId	Account id	false	string
machineType	Machine type	false	string
name	Name	false	string
osFamily	Os family	false	string
osName	Os name	false	string

osRevision	Os revision	false	string
siteId	Site id	false	string
uuid	UUID of the agent	false	string
version	Version	false	string

Get alerts - response - alertInfo

Name	Description	Required	Value
alertId	Alert ID	false	string
analystVerdict	Analyst verdict	false	enum
createdAt	Timestamp alert sent for detection	false	string
dnsRequest	Get the DNS name.	false	string
dnsResponse	Get the DNS response information (examples: IP address, DNS, data type).	false	string
dstIp	Get the IP address of the destination.	false	string
dstPort	Get the port number of the destination.	false	string
dvEventId	Deep Visibility event ID	false	string
eventType	Event type	false	string
hitType	Type of hit reported from the Agent	false	enum
incidentStatus	Incident status	false	enum
indicatorCategory	Get the Indicator categories for this process.	false	string
indicatorDescription	Get the description of the Indicator.	false	string
indicatorName	Get the Indicator names for this process.	false	string
isEdr	True if the event is edr event	false	boolean
loginAccountDomain	Get the domain or computer name for which the login attempt was performed.	false	string
loginAccountSid	Get the SID of the account that attempted to log in.	false	string
loginIsAdministratorEquivalent	See if the login attempt was	false	string

	performed by an administrator equivalent.		
loginIsSuccessful	Check if the login attempt succeeded.	false	string
loginUserName	Get the login username.	false	string
loginType	Get the type of login that was performed.	false	string
modulePath	Get the paths of modules loaded by this process.	false	string
moduleSha1	Get the SHA1 signatures for modules loaded by this process.	false	string
netEventDirection	Get the direction of the connection attempt (incoming or outgoing).	false	string
registryKeyPath	Get the full paths of registry entries modified by this process.	false	string
registryOldValue	Get the previous registry value if it was modified.	false	string
registryOldValueType	Get the previous registry value type if it was modified.	false	string
registryPath	Get the full path location of the registry key entry.	false	string
registryValue	Get the registry value	false	string
reportedAt	Timestamp of alert creation in STAR	false	string
source	Source reported from the Agent.	false	string
srcIp	Get the IP address of the traffic source.	false	string
srcMachineIp	Get the IP address of the endpoint performing the login attempt.	false	string
srcPort	Get the port number of the traffic source.	false	string
tiIndicatorComparisonMethod	Get the comparison method used by SentinelOne to trigger the event.	false	string
tiIndicatorSource	Get the source of the identified Threat Intelligence indicator.	false	string
tiIndicatorType	Get the type of the identified Threat Intelligence indicator.	false	string
tiIndicatorValue	Get the value of the identified Threat Intelligence indicator.	false	string

updatedAt	Date of alert updated in Star MMS	false	string
-----------	-----------------------------------	-------	--------

Application Control - Rules

Get a single NAC rule

GET /web/api/v2.1/nac/config/api/v1/nac/rules/{id}

Retrieves a single NAC rule by its ID

Parameters

scopeid	optional	Scope ID
scopetype	optional	Scope Type

Response Messages

200 - Rule retrieved successfully

400 - Invalid rule ID format or bad request

401 - Unauthorized

403 - Forbidden

404 - Rule not found or out of scope

405 - Method Not Allowed

409 - Conflict

415 - Unsupported Media Type

422 - Unprocessable Content

429 - Too Many Requests

500 - Internal server error

Response Schema

Name	Description	Required	Value
behavior	Rule behavior	false	enum
createdAt	Timestamp when the rule was created	false	string
createdBy	Created by	false	string
description	Description	false	string
exceptions	Exceptions	false	undefined []
id	Rule ID	false	string
osType	OS types	false	string []
parameters	Rule conditions	false	see Get a single NAC rule - response - parameters table
propagation	Whether propagation is enabled	false	boolean
ruleName	Rule name	false	string
scope	Scope info	false	see Get a single NAC rule - response - scope table

Get a single NAC rule - response - parameters

Name	Description	Required	Value
applicationVersion	Application version	false	string
parentProcess	Parent process	false	string
path	Path	false	string
process	Process name	false	string
publisher	Publisher	false	string
sha256	SHA-256 hash	false	string
signer	Signer	false	string

Get a single NAC rule - response - scope

Name	Description	Required	Value
scopeId	Scope ID	false	string
scopeLevel	Scope level	false	enum
scopeName	Scope name	false	string
scopePath	Scope path	false	string

Update NAC rule

PUT /web/api/v2.1/nac/config/api/v1/nac/rules/{id}

Updates an existing Native Application Control rule by ID

Response Messages

200 - Rule updated successfully

400 - Validation error, invalid request, or rule not found

401 - Unauthorized

403 - Forbidden

404 - Rule not found

405 - Method Not Allowed

sorts	Sorting	false	undefined []

Export NAC rules to CSV - body - scopeSelector

Name	Description	Required	Value
scopeIds	Scope IDs	false	string []
scopeType	Scope type	false	enum

Get rule change log

GET /web/api/v2.1/nac/config/api/v1/nac/rules/{id}/changelog

Retrieves the change history for a specific rule

Parameters

scopeid	optional	Scope ID
scopetype	optional	Scope Type

Response Messages

200 - Change log retrieved successfully

400 - Invalid rule ID format or invalid scope parameters

401 - Unauthorized

403 - Forbidden

404 - Rule not found

405 - Method Not Allowed

Name	Description	Required	Value
enumValues	Enum values for this column, if applicable	false	string []
fieldId	Field name	false	string
filterTypes	Supported filter types	false	string []
groupable	Whether grouping is supported	false	boolean
sortable	Whether sorting is supported	false	boolean

Get CSV processing status

GET /web/api/v2.1/nac/config/api/v1/nac/csv/status/{fileOperationId}

Retrieves the current status of a CSV file processing request

Parameters

scopeid	optional	Scope ID
scopetype	optional	Scope Type

Response Messages

200 - Processing status retrieved successfully

400 - Invalid request or file operation not found

401 - Unauthorized

403 - Forbidden

Application Control - Settings and Labels

Get NAC settings

GET /web/api/v2.1/nac/config/api/v1/nac/settings

Retrieves NAC Application Control settings for the given scope or default settings

Parameters

scopeid	optional	Scope ID
scopetype	optional	Scope type (ACCOUNT, SITE, GROUP)

Response Messages

200 - Settings retrieved successfully

400 - Invalid scope parameters

401 - Unauthorized

403 - Forbidden

404 - Not Found

405 - Method Not Allowed

409 - Conflict

labelName	Label name	false	string

Application Management

Get CVE data

GET /web/api/v2.1/application-management/risks

Get the CVE vulnerability data for each CVE.

Parameters

accountids	optional	Single Account ID to filter by. Example: "225494730938493804".
analystverdict	optional	Include Default(not edited)/ False Positives / Added CVEs for Vulnerabilities. Example: "Default,False Positive,Added CVE".
application__contains	optional	Free-text filter by application name and version (supports multiple values). Example: "Office 1.1,Test".
applicationnames	optional	Included application names. Example: "Office 1.1,Test".
applicationvendor__contains	optional	Free-text filter by vendor (supports multiple values). Example: "Microsoft,Apple".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
cveid__contains	optional	Free-text filter by CVE id (supports multiple values). Example: "CVE-1234-5678".
daysfromcvedetection	optional	Days from CVE detection, e.g. 12 days or more. Example: "12".
detectiondate__between	optional	Date range for CVE detection date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
detectiondate__gt	optional	CVE detection date after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__gte	optional	CVE detection date after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".

detectiondate__lt	optional	CVE detection date before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__lte	optional	CVE detection date before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
domain__contains	optional	Free-text filter by domain (supports multiple values). Example: "mybusiness,workgroup".
domains	optional	Included network domains. Example: "mybusiness,workgroup".
endpointname__contains	optional	Free-text filter by endpoint name (supports multiple values). Example: "Office,Test".
endpointtypes	optional	Included endpoint types
exploitcodematurity	optional	Included exploit code maturity values. Available for Singularity Vulnerability Management SKU. Example: "FUNCTIONAL,HIGH".
exploitedinthewild	optional	Included exploited in the wild values. Available for Singularity Vulnerability Management SKU. Example: "EXPLOITED_UNKNOWN,YES".
groupids	optional	Single Group ID to filter by. Example: "225494730938493804".
includeremovals	optional	Include also removed CVEs in the results
lastscanresults	optional	Included last scan results. Example: "Succeeded".
limit	optional	Limit number of returned items (1-1000). Example: "10".
mitigationstatus	optional	Filters by the application's mitigation status values. Available for Singularity Vulnerability Management SKU. Example: "Not mitigated,To be patched,On hold".
ostypes	optional	Included OS types
osversions	optional	Included OS versions
publisheddate__between	optional	Date range for CVE publish date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
publisheddate__gt	optional	CVE published date after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
publisheddate__gte	optional	CVE published date after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
publisheddate__lt	optional	CVE published date before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
publisheddate__lte	optional	CVE published date before or at this timestamp. Example:

		"2018-02-27T04:49:26.257525Z".
remediationlevels	optional	Included remediation level values. Available for Singularity Vulnerability Management SKU. Example: "OFFICIAL_FIX,TEMPORARY_FIX".
reportconfidence	optional	Included report confidence values. Available for Singularity Vulnerability Management SKU. Example: "REASONABLE,CONFIRMED".
riskscore__between	optional	Risk score (inclusive). Available for Singularity Vulnerability Management SKU. Example: "5-8.9".
riskupdateddate__between	optional	Significant CVE updates within this date range(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
riskupdateddate__gt	optional	Significant CVE updates after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
riskupdateddate__gte	optional	Significant CVE updates after or at this timestamp. Recommended for fetching delta-changes. Example: "2018-02-27T04:49:26.257525Z".
riskupdateddate__lt	optional	Significant CVE updates before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
riskupdateddate__lte	optional	Significant CVE updates before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
severities	optional	Included severities. Example: "CRITICAL,HIGH".
siteids	optional	Single Site ID to filter by. Example: "225494730938493804".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
vendors	optional	Included vendors. Example: "Microsoft,Apple".

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Initiate scan - response - data table
errors	Errors	false	array

Initiate scan - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Body Schema

Name	Description	Required	Value
filter	Filter	true	see Initiate scan - body - filter table

Initiate scan - body - filter

Name	Description	Required	Value
accountIds	Single Account ID to filter by	false	string []
siteIds	Single Site ID to filter by	false	string []
tenant	if the entire tenant scope should be filtered	false	boolean

Get Application Inventory

GET /web/api/v2.1/application-management/inventory

Get application inventory data grouped by application name and vendor.

Parameters

accountids	optional	Single Account ID to filter by. Example: "225494730938493804".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
endpointname__contains	optional	Free-text filter by endpoint name (supports multiple values). Example: "Office,Test".
endpointuuid__contains	optional	Free-text filter by endpoint uuid (supports multiple values)
groupids	optional	Single Group ID to filter by. Example: "225494730938493804".
limit	optional	Limit number of returned items (1-1000). Example: "10".
name__contains	optional	Free-text filter by application name (supports multiple values). Example: "Office,Test".
osarchitectures	optional	Included OS architectures
ostypes	optional	Included OS types
osversion__contains	optional	Free-text filter by os version (supports multiple values). Example: "Windows 7 ServicePack1".

osversions	optional	Included OS versions
siteids	optional	Single Site ID to filter by. Example: "225494730938493804".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
vendor__contains	optional	Free-text filter by vendor (supports multiple values). Example: "Microsoft,Apple".
vendors	optional	Included vendors. Example: "Microsoft,Apple".

Get App Inventory Endpoints

GET /web/api/v2.1/application-management/inventory/endpoints

Get endpoint data for a specific application.

Parameters

applicationname	required	Name
applicationvendor	required	Vendor
accountids	optional	Single Account ID to filter by. Example: "225494730938493804".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.

cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
detectiondate__between	optional	Date range for application detection date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
detectiondate__gt	optional	Application detection date after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__gte	optional	Application detection date after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__lt	optional	Application detection date before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__lte	optional	Application detection date before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
endpointname__contains	optional	Free-text filter by endpoint name (supports multiple values). Example: "Office,Test".
endpointuuid__contains	optional	Free-text filter by endpoint uuid (supports multiple values)
groupids	optional	Single Group ID to filter by. Example: "225494730938493804".
limit	optional	Limit number of returned items (1-1000). Example: "10".
osarchitectures	optional	Included OS architectures
ostypes	optional	Included OS types
osversions	optional	Included OS versions
siteids	optional	Single Site ID to filter by. Example: "225494730938493804".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
versions	optional	Included application versions

Inventory Endpoints Data Export

GET /web/api/v2.1/application-management/inventory/endpoints/export/csv

Export application inventory endpoints data to CSV.

Parameters

applicationname	required	Name
applicationvendor	required	Vendor
accountids	optional	Single Account ID to filter by. Example: "225494730938493804".
csvdelimiter	optional	"Optionally specify character to be used as CSV delimiter. Defaults to ','. Example: ','.
detectiondate__between	optional	Date range for application detection date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
detectiondate__gt	optional	Application detection date after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__gte	optional	Application detection date after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__lt	optional	Application detection date before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__lte	optional	Application detection date before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
endpointname__contains	optional	Free-text filter by endpoint name (supports multiple values). Example: "Office,Test".
endpointuuid__contains	optional	Free-text filter by endpoint uuid (supports multiple values)
groupids	optional	Single Group ID to filter by. Example: "225494730938493804".
osarchitectures	optional	Included OS architectures
ostypes	optional	Included OS types

osversions	optional	Included OS versions
siteids	optional	Single Site ID to filter by. Example: "225494730938493804".
versions	optional	Included application versions

Get Application CVEs

GET /web/api/v2.1/application-management/risks/cves

Get CVE data for a specific application. Use applicationIds query parameter to include a single application id (required). For Ranger Insights license users, either use the applicationIds query parameter that can include multiple application IDs, or the applicationName and applicationVendors query parameters.

Parameters

accountids	optional	Single Account ID to filter by. Example: "225494730938493804".
analystverdict	optional	Include Default(not edited)/ False Positives / Added CVEs for Vulnerabilities. Example: "Default,False Positive,Added CVE".
applicationids	optional	Included application versions by id. Example: "225494730938493804,225494730938493915".
applicationname	optional	Application name
applicationvendor	optional	Application vendor
applicationversions	optional	Included application versions
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
cveid__contains	optional	Free-text filter by CVE id (supports multiple values). Example:

		"CVE-1234-5678".
exploitcodematurity	optional	Included exploit code maturity values. Available with Ranger Insights. Example: "FUNCTIONAL,HIGH".
exploitedinthewild	optional	Included exploited in the wild values. Available with Ranger Insights. Example: "EXPLOITED_UNKNOWN,YES".
groupids	optional	Single Group ID to filter by. Example: "225494730938493804".
limit	optional	Limit number of returned items (1-1000). Example: "10".
publisheddate__between	optional	Date range for CVE publish date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
publisheddate__gt	optional	CVE published date after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
publisheddate__gte	optional	CVE published date after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
publisheddate__lt	optional	CVE published date before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
publisheddate__lte	optional	CVE published date before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
remediationlevels	optional	Included remediation level values. Available with Ranger Insights. Example: "OFFICIAL_FIX,TEMPORARY_FIX".
reportconfidence	optional	Included report confidence values. Available with Ranger Insights. Example: "REASONABLE,CONFIRMED".
severities	optional	Included severities. Example: "CRITICAL,HIGH".
siteids	optional	Single Site ID to filter by. Example: "225494730938493804".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

Application CVE Data Export

GET /web/api/v2.1/application-management/risks/cves/export/csv

Export CVE data to CSV. Use applicationIds query parameter to include a single application id (required). For Ranger Insights license users, either use the applicationIds query parameter that can include multiple application IDs, or the applicationName and applicationVendors query parameters.

Parameters

accountids	optional	Single Account ID to filter by. Example: "225494730938493804".
analystverdict	optional	Include Default(not edited)/ False Positives / Added CVEs for Vulnerabilities. Example: "Default,False Positive,Added CVE".
applicationids	optional	Included application versions by id. Example: "225494730938493804,225494730938493915".
applicationname	optional	Application name
applicationvendor	optional	Application vendor
applicationversions	optional	Included application versions
csvdelimiter	optional	"Optionally specify character to be used as CSV delimiter. Defaults to ",". Example: ",".
cveid__contains	optional	Free-text filter by CVE id (supports multiple values). Example: "CVE-1234-5678".

exploitcodematurity	optional	Included exploit code maturity values. Available with Ranger Insights. Example: "FUNCTIONAL,HIGH".
exploitedinthewild	optional	Included exploited in the wild values. Available with Ranger Insights. Example: "EXPLOITED_UNKNOWN,YES".
groupids	optional	Single Group ID to filter by. Example: "225494730938493804".
publisheddate__between	optional	Date range for CVE publish date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
publisheddate__gt	optional	CVE published date after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
publisheddate__gte	optional	CVE published date after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
publisheddate__lt	optional	CVE published date before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
publisheddate__lte	optional	CVE published date before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
remediationlevels	optional	Included remediation level values. Available with Ranger Insights. Example: "OFFICIAL_FIX,TEMPORARY_FIX".
reportconfidence	optional	Included report confidence values. Available with Ranger Insights. Example: "REASONABLE,CONFIRMED".
severities	optional	Included severities. Example: "CRITICAL,HIGH".
siteids	optional	Single Site ID to filter by. Example: "225494730938493804".

Get Aggregated Applications With Risk

GET /web/api/v2.1/application-management/risks/aggregated-applications

Get data for all applications. Available with Ranger Insights license.

Parameters

accountids	optional	Single Account ID to filter by. Example: "225494730938493804".
applicationtypes	optional	Application type. Available with Ranger Insights. Example: "A,p,p,l,i,c,a,t,i,o,n".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
cveid__contains	optional	Free-text filter by CVE id (supports multiple values). Example: "CVE-1234-5678".
daysfromdetection	optional	Days from application detection, e.g. 12 days or more. Example: "12".
detectiondate__between	optional	Date range for application detection date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
detectiondate__gt	optional	Application detection date after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__gte	optional	Application detection date after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__lt	optional	Application detection date before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__lte	optional	Application detection date before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
domains	optional	Included domains.
endpointname__contains	optional	Free-text filter by endpoint name (supports multiple values). Example: "Office,Test".
endpointtypes	optional	Included endpoint types. Example: "desktop,laptop".
endpointuuid__contains	optional	Free-text filter by endpoint uuid (supports multiple values)
exploitcodematurity	optional	Included exploit code maturity values. Available with Ranger Insights. Example: "Functional,High".

exploitedinthewild	optional	Included exploited in the wild values. Available with Ranger Insights. Example: "Unknown,Yes".
groupids	optional	Single Group ID to filter by. Example: "225494730938493804".
highestseverities	optional	Included highest severities. Example: "CRITICAL,HIGH".
limit	optional	Limit number of returned items (1-1000). Example: "10".
mostcommonstatuses	optional	Included most common status values. Available with Ranger Insights.
name__contains	optional	Free-text filter by application name (supports multiple values). Example: "Office 1.1,Test".
ostypes	optional	Included OS types. Example: "windows,linux".
remediationlevels	optional	Included remediation level values. Available with Ranger Insights. Example: "Official Fix,Temporary Fix".
siteids	optional	Single Site ID to filter by. Example: "225494730938493804".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
vendor__contains	optional	Free-text filter by vendor (supports multiple values). Example: "Microsoft,Apple".
vendors	optional	Included vendors. Example: "Microsoft,Apple".

Get Endpoints For Vulnerable App

GET /web/api/v2.1/application-management/risks/endpoints

Get a list of all endpoints installed with a specific application that contains vulnerabilities. Use applicationIds query parameter to include a single application id (required). For Ranger Insights license users, either use the applicationIds query parameter that can include multiple application IDs, or the applicationName and applicationVendors query parameters.

Parameters

accountids	optional	Single Account ID to filter by. Example: "225494730938493804".
applicationids	optional	Included application versions by id. Example: "225494730938493804,225494730938493915".
applicationname	optional	Application name
applicationvendor	optional	Application vendor
applicationversions	optional	Included application versions
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
daysfromdetection	optional	Days from application detection, e.g. 12 days or more. Example: "12".
daystomitigation__between	optional	Date range for days left to mitigation. Available with Ranger Insights when using ticket integration. Example: "1-30".
detectiondate__between	optional	Date range for application detection date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
detectiondate__gt	optional	Application detection date after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__gte	optional	Application detection date after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__lt	optional	Application detection date before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__lte	optional	Application detection date before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".

domain__contains	optional	Free-text filter by domain (supports multiple values). Example: "mybusiness,workgroup".
domains	optional	Included endpoint domains
endpointid__contains	optional	Free-text filter by endpoint id (supports multiple values)
endpointname__contains	optional	Free-text filter by endpoint name (supports multiple values). Example: "Office,Test".
endpointtypes	optional	Included endpoint types
endpointuuid__contains	optional	Free-text filter by endpoint uuid (supports multiple values)
groupids	optional	Single Group ID to filter by. Example: "225494730938493804".
lastscandate__between	optional	Date range for last scan date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
lastscandate__gt	optional	Last scan date after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastscandate__gte	optional	Last scan date after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastscandate__lt	optional	Last scan date before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastscandate__lte	optional	Last scan date before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastscanresults	optional	Included last scan results. Example: "Succeeded".
limit	optional	Limit number of returned items (1-1000). Example: "10".
ostypes	optional	Included OS types
osversions	optional	Included OS versions
siteids	optional	Single Site ID to filter by. Example: "225494730938493804".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
statuses	optional	Included statuses. Available with Ranger Insights.

statusmessage__contains	optional	Free-text filter by status message (supports multiple values). Available with Ranger Insights. Example: "assigned to john,top priority".
ticketid__contains	optional	Free-text filter by ticket id. Available with Ranger Insights when using ticket integration. Example: "ABC-123,ABCD-100".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Endpoints For Vulnerable App - response - pagination table
data	Response data	false	see Get Endpoints For Vulnerable App - response - data table
errors	Errors	false	array

Get Endpoints For Vulnerable App - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Risk Endpoint Data Export

GET /web/api/v2.1/application-management/risks/endpoints/export/csv

Export endpoint data to CSV. Use applicationIds query parameter to include a single application id (required). For Ranger Insights license users, either use the applicationIds query parameter that can include multiple application IDs, or the applicationName and applicationVendors query parameters.

Parameters

accountids	optional	Single Account ID to filter by. Example: "225494730938493804".
applicationids	optional	Included application versions by id. Example: "225494730938493804,225494730938493915".
applicationname	optional	Application name
applicationvendor	optional	Application vendor
applicationversions	optional	Included application versions
csvdelimiter	optional	"Optionally specify character to be used as CSV delimiter. Defaults to ','. Example: ','.
daysfromdetection	optional	Days from application detection, e.g. 12 days or more. Example: "12".
daystomitigation__between	optional	Date range for days left to mitigation. Available with Ranger Insights when using ticket integration. Example: "1-30".
detectiondate__between	optional	Date range for application detection date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
detectiondate__gt	optional	Application detection date after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__gte	optional	Application detection date after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__lt	optional	Application detection date before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
detectiondate__lte	optional	Application detection date before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
domain__contains	optional	Free-text filter by domain (supports multiple values). Example: "mybusiness,workgroup".

domains	optional	Included endpoint domains
endpointid__contains	optional	Free-text filter by endpoint id (supports multiple values)
endpointname__contains	optional	Free-text filter by endpoint name (supports multiple values). Example: "Office,Test".
endpointtypes	optional	Included endpoint types
endpointuuid__contains	optional	Free-text filter by endpoint uuid (supports multiple values)
groupids	optional	Single Group ID to filter by. Example: "225494730938493804".
lastscandate__between	optional	Date range for last scan date(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
lastscandate__gt	optional	Last scan date after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastscandate__gte	optional	Last scan date after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastscandate__lt	optional	Last scan date before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastscandate__lte	optional	Last scan date before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastscanresults	optional	Included last scan results. Example: "Succeeded".
ostypes	optional	Included OS types
osversions	optional	Included OS versions
siteids	optional	Single Site ID to filter by. Example: "225494730938493804".
statuses	optional	Included statuses. Available with Ranger Insights.
statusmessage__contains	optional	Free-text filter by status message (supports multiple values). Available with Ranger Insights. Example: "assigned to john,top priority".
ticketid__contains	optional	Free-text filter by ticket id. Available with Ranger Insights when using ticket integration. Example: "ABC-123,ABCD-100".

Application Risk

Export Applications

GET /web/api/v2.1/export/installed-applications

Export the list of applications installed on endpoints with Application Risk-enabled Agents and their properties, including the CVEs for each application that requires a patch. The CSV file is stored on the Management. Application Risk requires Complete SKU. This feature is in EA. To join the EA program, contact your SentinelOne Sales Rep.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
agentcomputername__contains	optional	Free-text filter by computer name (supports multiple values). Example: "john-office,WIN".
agentisdecommissioned	optional	Include active agents, decommissioned or both. Example: "True,False".
agentmachinetypes	optional	Filter by endpoint machine types. Example: "unknown".
agentmachinetypesnin	optional	Filter not by endpoint machine types. Example: "unknown".
agentosversion__contains	optional	Free-text filter by OS full name and version (supports multiple values). Example: "Service Pack 1".
agentuuid__contains	optional	Free-text filter by agent UUID (supports multiple values). Example: "e92-01928,b055".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	Filter by application IDs. Example: "225494730938493804,225494730938493915".
installedat__between	optional	Filter by installation date range
name__contains	optional	Free-text filter by application name (supports multiple values). Example: "calc".
ostypes	optional	Filter by OS types. Example: "linux".
ostypesnin	optional	Filter not by OS types. Example: "linux".
publisher__contains	optional	Free-text filter by application publisher (supports multiple values). Example: "Sentinel".
risklevels	optional	Filter by risk. Example: "none".
risklevelsnin	optional	Filter not by risk. Example: "none".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
size__between	optional	Filter by application size range (bytes). Example: "1024-104856".
types	optional	Filter by application types. Example: "app".
typesnin	optional	Filter not by application types. Example: "app".
version__contains	optional	Free-text filter by application version (supports multiple values). Example: "1.22.333,build".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Application Risk (Deprecated)

[DEPRECATED] Get Applications

GET /web/api/v2.1/installed-applications

Get the applications, and their data (such as risk level), installed on endpoints with Application Risk-enabled Agents that match the filter. SentinelOne Application Risk lets you monitor applications installed on endpoints. Applications not updated with the latest patches are vulnerable to exploits. With SentinelOne Application Risk you can see all applications to be patched, on all endpoints or on a specific endpoint. The Agent takes a snapshot of the endpoint application data and checks for vulnerabilities in the SentinelOne Cloud. When the Agent detects a change to the application data, it sends a diff to the Management.

Application Risk requires Complete SKU. This feature is in EA. To join the EA program, contact your SentinelOne Sales Rep.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
agentcomputername__contains	optional	Free-text filter by computer name (supports multiple values). Example: "john-office,WIN".
agentisdecommissioned	optional	Include active agents, decommissioned or both. Example: "True,False".
agentmachinetypes	optional	Filter by endpoint machine types. Example: "unknown".
agentmachinetypesnin	optional	Filter not by endpoint machine types. Example: "unknown".
agentosversion__contains	optional	Free-text filter by OS full name and version (supports multiple values). Example: "Service Pack 1".
agentuuid__contains	optional	Free-text filter by agent UUID (supports multiple values). Example: "e92-01928,b055".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.

cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	Filter by application IDs. Example: "225494730938493804,225494730938493915".
installedat__between	optional	Filter by installation date range
limit	optional	Limit number of returned items (1-1000). Example: "10".
name__contains	optional	Free-text filter by application name (supports multiple values). Example: "calc".
ostypes	optional	Filter by OS types. Example: "linux".
ostypesnin	optional	Filter not by OS types. Example: "linux".
publisher__contains	optional	Free-text filter by application publisher (supports multiple values). Example: "Sentinel".
risklevels	optional	Filter by risk. Example: "none".
risklevelsnin	optional	Filter not by risk. Example: "none".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
size__between	optional	Filter by application size range (bytes). Example: "1024-104856".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
types	optional	Filter by application types. Example: "app".
typesnin	optional	Filter not by application types. Example: "app".
version__contains	optional	Free-text filter by application version (supports multiple values). Example: "1.22.333,build".

[DEPRECATED] Get CVEs

GET /web/api/v2.1/installed-applications/cves

Get known CVEs for applications that are installed on endpoints with Application Risk-enabled Agents. Application Risk requires Complete SKU. This feature is in EA. To join the EA program, contact your SentinelOne Sales Rep.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
applicationids	optional	Filter by application IDs. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__gt	optional	Created at greater than. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Created at greater or equal than. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Created at lesser than. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Created at lesser or equal than. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
cveids	optional	Filter by global CVE ids. Example: "CVE-2018-3182,CVE-2018-1087".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".

ids	optional	Filter by internal CVE IDs. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
updatedat__gt	optional	Updated at greater than. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Updated at greater or equal than. Example: "2018-02-27T04:49:26.257525Z".

Auto Upgrade Policy

All Policies OS Count

GET /web/api/v2.1/upgrade-policy/all-policies-count

Get the number of all policies for each OS from the given scope and the inherited scopes

Parameters

scopelevel	required	Scope level, one of 'account', 'group', 'site' or 'tenant'
scopeid	optional	Scope ID

Response Messages

200 - Success

400 - Bad request

Response Schema

Name	Description	Required	Value
linux		false	integer
macos		false	integer
windows		false	integer

Get Available Packages

GET /web/api/v2.1/upgrade-policy/available-packages

Get Available Packages

Parameters

ostype	required	OS type, one of 'linux', 'macos' or 'windows'
scopelevel	required	Scope level, one of 'account', 'group', 'site' or 'tenant'
displayname__contains	optional	Partially match the name of the package, e.g. '22.1 GA'
scopeid	optional	Scope ID

Response Messages

200 - Success

400 - Bad request

Response Schema

Name	Description	Required	Value
data		false	see Get Available Packages - response - data table

Get Available Packages - response - data

Name	Description	Required	Value
packages		false	undefined []

Has Policy

POST /web/api/v2.1/upgrade-policy/has-policy

Has policy

Response Messages

200 - Success

400 - Bad request

Response Schema

Name	Description	Required	Value
hasPolicies		false	boolean

Body Schema

Name	Description	Required	Value
groups	List of Group IDs to filter by. Example: '225494730938493804,225494730938493915'.	false	string []
osType	OS type, one of 'linux', 'macos' or 'windows'	false	string

Get Parent Policies

GET /web/api/v2.1/upgrade-policy/parent-policies

Get paginated and ordered parent policies by a given scope

Parameters

limit	required	Limit number of returned items. Should be more than 1. Example: '10'.
ostype	required	OS type, one of 'linux', 'macos' or 'windows'
scopelevel	required	Scope level, one of 'account', 'group', 'site' or 'tenant'
skip	required	Skip first number of items. Example: '0'.
sortby	required	The column to sort the results by. Example: 'priority'.
sortorder	required	Sort direction. Could be 'asc' or 'desc'.
scopeid	optional	Scope ID

Response Messages

200 - Success

400 - Bad request

Response Schema

Name	Description	Required	Value
data		false	see Get Parent Policies - response - data table
pagination		false	see Get Parent Policies - response - pagination table

Get Parent Policies - response - data

Name	Description	Required	Value
isInherited		false	boolean
policies		false	undefined []
policiesInChildScope		false	boolean

Get Parent Policies - response - pagination

Name	Description	Required	Value
totalItems		false	integer

Get Policies

GET /web/api/v2.1/upgrade-policy/policies

Get paginated and ordered policies by a given scope

Parameters

limit	required	Limit number of returned items. Should be more than 1. Example: '10'
ostype	required	OS type, one of 'linux', 'macos' or 'windows'
scopelevel	required	Scope level, one of 'account', 'group', 'site' or 'tenant'
skip	required	Skip first number of items. Example: '0'.
sortby	required	The column to sort the results by. Example: 'priority'.
sortorder	required	Sort direction. Could be 'asc' or 'desc'.
scopeid	optional	Scope ID

Response Messages

200 - Success

400 - Bad request

Response Schema

Name	Description	Required	Value
data		false	see Get Policies - response - data table
pagination		false	see Get Policies - response - pagination table

Get Policies - response - data

Name	Description	Required	Value
isInherited		false	boolean
policies		false	undefined []
policiesInChildScope		false	boolean

Get Policies - response - pagination

Name	Description	Required	Value
totalItems		false	integer

Deactivate Policies

POST /web/api/v2.1/upgrade-policy/policies

Deactivate all policies

Parameters

ostype	required	OS type, one of 'linux', 'macos' or 'windows'
scopelevel	required	Scope level, one of 'account', 'group', 'site' or 'tenant'
scopeid	optional	Scope ID

Response Messages

200 - Success

400 - Bad request

Response Schema

Name	Description	Required	Value
response		false	string

Policies OS Count

GET /web/api/v2.1/upgrade-policy/policies-count

Get the number of policies for each OS, for a given scope level and id

Parameters

scopelevel	required	Scope level, one of 'account', 'group', 'site' or 'tenant'
scopeid	optional	Scope ID

Response Messages

200 - Success

400 - Bad request

Response Schema

Name	Description	Required	Value
linux		false	integer
macos		false	integer
windows		false	integer

Create Policy

POST /web/api/v2.1/upgrade-policy/policy

Add policy

Response Messages

200 - Success

400 - Bad request

Response Schema

Name	Description	Required	Value
response		false	string

Body Schema

Name	Description	Required	Value
activatedAt		false	string
allEndpoints		false	boolean
createdAt		false	string
description		false	string
id		false	string
isActive		false	boolean
isScheduled		false	boolean
maxRetries		false	integer
name		false	string
osType		false	string
package		false	see Create Policy - body - package table
priority		false	integer
scopeld		false	string
scopeLevel		false	string
tags		false	string []
updatedAt		false	string

Create Policy - body - package

Name	Description	Required	Value
build		false	string
fileId		false	string
major		false	string
minor		false	string

Update Policy

PUT /web/api/v2.1/upgrade-policy/policy/{policyid}

Update existing policy

Response Messages

200 - Success

400 - Bad request

Response Schema

Name	Description	Required	Value
response		false	string

Body Schema

Name	Description	Required	Value
allEndpoints	Affected endpoints. 'true' if the policy is applied to all endpoints. If 'false', tags must be provided.	false	boolean
description	Policy description	false	string
isActive	'true' if policy is active, 'false' if policy is disabled	false	boolean
isScheduled	In case of maintenance window selected, scheduling an upgrade for maintenance window	false	boolean
maxRetries	Maximum number of upgrade retries for an endpoint in case of retrieable failure. If provided, it should be a positive integer. Defaults to 5.	false	integer
name	Policy name. This name will be used for creating tasks. Should be unique.	false	string
osType	OS type, one of 'linux', 'macos' or 'windows'	false	string
package		false	see Update Policy - body - package table
scopeId	Scope ID	false	string
scopeLevel	Scope level, one of 'account', 'group', 'site' or 'tenant'	false	string
tags	Tags for policy application. If provided, AllEndpoints should be false.	false	string []

Update Policy - body - package

Name	Description	Required	Value
build		false	string
fileId		false	string
major		false	string
minor		false	string

Policy Action

POST /web/api/v2.1/upgrade-policy/policy/{policyid}

Perform action on a certain policy

Response Messages

200 - Success

400 - Bad request

Response Schema

Name	Description	Required	Value
response		false	string

Body Schema

Name	Description	Required	Value
action	Policy action, one of 'delete', 'activate' or 'deactivate'	false	string

Reset Policy Retry Counter

PUT /web/api/v2.1/upgrade-policy/policy/{policyid}/reset-retry-counter

Reset the number of times an Agent upgrade will be retried if the original upgrade attempt fails.

Response Messages

200 - Success

400 - Bad request

Response Schema

Name	Description	Required	Value
response		false	string

Reorder Policies

PUT /web/api/v2.1/upgrade-policy/reorder

Reorder policies

Response Messages

200 - Success

400 - Bad request

Response Schema

Name	Description	Required	Value
response		false	string

Body Schema

Name	Description	Required	Value
policies	List of policy IDs and their new order. Example: { "id": "2ad5fdd3-7f9d-4969-9d52-3560fcb482fb", "order": 0, "id": "b448ed4e-545f-442d-ad20-624876e85e84", "order": 1. }	false	undefined []

Set Scope Inheriting

PUT /web/api/v2.1/upgrade-policy/set-inheriting

Set Scope Inheriting

Response Messages

200 - Success

400 - Bad request

Response Schema

Name	Description	Required	Value
response		false	string

Body Schema

Name	Description	Required	Value
isInheriting	True if policies are inherited from the higher scopes, false otherwise.	false	boolean
scopeId	Scope ID	false	string
scopeLevel	Scope level, one of 'account', 'group', 'site' or 'tenant'	false	string

Cloud Funnel

Validate Bucket

POST /web/api/v2.1/cloud-funnel/validate-bucket-permissions

Validates bucket permissions.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Validate Bucket - response - data table
errors	Errors	false	array

Validate Bucket - response - data

Name	Description	Required	Value
isValid	Bucket permissions is valid or invalid	true	boolean
error	Error message in case the bucket permissions is invalid	false	string

Body Schema

Name	Description	Required	Value
data	Data	true	see Validate Bucket - body - data table

Validate Bucket - body - data

Name	Description	Required	Value
bucketUrl	Validate bucket permissions	true	string
accessKeyId	Access key id, for S3 compatible storages (e.g. R2)	false	string
accountId	Account id	false	string
cloudProvider	Cloud provider, default is aws	false	string
roleToAssume	The aws role to assume when using assume role functionality.Only applicable if cloud_provider is s3.	false	string
secretAccessKey	Secret access key, for S3 compatible storages (e.g. R2)	false	string
siteId	Site id	false	string
useAssumeRole	If set to true, activates the AWS AssumeRole functionality for accessing S3 buckets or other associated resources. Only applicable if cloud_provider is s3.	false	boolean

Get cloud funnel rule

GET /web/api/v2.1/cloud-funnel/onboarding

Gets cloud funnel onboarding rule details

Parameters

accountId	optional	Account id. Example: "225494730938493804".
siteId	optional	Site id. Example: "225494730938493804".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get cloud funnel rule - response - data table
errors	Errors	false	array

Get cloud funnel rule - response - data

Name	Description	Required	Value
bucketUrl	Bucket url	true	string
disableStream	disable events stream	true	boolean
accessKeyId	Access key id, for S3 compatible storages (e.g. R2)	false	string
accountOnboardingExists	For site scope, is account onboarding exists	false	boolean
assumeRoleExternalId	The AWS assume role external id.	false	string
cloudProvider	Cloud provider, default is aws	false	string
desiredFields	List of desired fields to be included in the output. If not specified, all fields are included.	false	string []
error	Error message in case the bucket permissions is invalid	false	string
globalOnboardingExists	Is global onboarding exists in table	false	boolean
id	log-archive-rule id, default for accounts: cloud-funnel	false	string
isInheriting	Is inheriting global setting	false	boolean
query	Sql query to validate	false	string
roleToAssume	The AWS role to assume when using assume role functionality. Only applicable if cloud_provider is s3.	false	string
secretAccessKey	Secret access key, for S3 compatible storages (e.g. R2)	false	string
useAssumeRole	If set to true, activates the AWS AssumeRole functionality for accessing S3 buckets or other associated resources. Only applicable if cloud_provider is s3.	false	boolean

Delete cloud funnel rule

DELETE /web/api/v2.1/cloud-funnel/onboarding

Deletes cloud funnel onboarding rule.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Delete cloud funnel rule - response - data table
errors	Errors	false	array

Delete cloud funnel rule - response - data

Name	Description	Required	Value
error	Error message in case the bucket permissions is invalid	true	string

Body Schema

Name	Description	Required	Value
data	Data	true	see Delete cloud funnel rule - body - data table

Delete cloud funnel rule - body - data

Name	Description	Required	Value
accountId	Account id	false	string
siteIds	Site ids	false	string []

Post onboarding cloud funnel

POST /web/api/v2.1/cloud-funnel/onboarding

Post onboarding cloud funnel rule.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Post onboarding cloud funnel - response - data table
errors	Errors	false	array

Post onboarding cloud funnel - response - data

Name	Description	Required	Value
bucketUrl	Bucket url	true	string
disableStream	disable events stream	true	boolean
accessKeyId	Access key id, for S3 compatible storages (e.g. R2)	false	string
accountOnboardingExists	For site scope, is account onboarding exists	false	boolean
assumeRoleExternalId	The AWS assume role external id.	false	string
cloudProvider	Cloud provider, default is aws	false	string
desiredFields	List of desired fields to be included in the output. If not specified, all fields are included.	false	string []
error	Error message in case the bucket permissions is invalid	false	string
globalOnboardingExists	Is global onboarding exists in table	false	boolean
id	log-archive-rule id, default for accounts: cloud-funnel	false	string
isInheriting	Is inheriting global setting	false	boolean
query	Syql query to validate	false	string
roleToAssume	The AWS role to assume when using assume role functionality. Only applicable if cloud_provider is s3.	false	string
secretAccessKey	Secret access key, for S3 compatible storages (e.g. R2)	false	string
useAssumeRole	If set to true, activates the AWS AssumeRole functionality for accessing S3 buckets or other associated resources. Only applicable if cloud_provider is s3.	false	boolean

Body Schema

Name	Description	Required	Value
data	Data	true	see Post onboarding cloud funnel - body - data table

Post onboarding cloud funnel - body - data

Name	Description	Required	Value
accessKeyId	Access key id, for S3 compatible storages (e.g. R2)	false	string
accountId	Account id	false	string
bucketUrl	bucket url	false	string
cloudProvider	Cloud provider, default is aws	false	string
desiredFields	List of desired fields to be included in the output. If not specified, all fields are included.	false	string []
disableStream	disable events stream	false	boolean
isInheriting	Is inheriting global setting	false	boolean
query	Syql query to validate	false	string
roleToAssume	The aws role to assume when using assume role functionality.Only applicable if cloud_provider is s3.	false	string
secretAccessKey	Secret access key, for S3 compatible storages (e.g. R2)	false	string

Validate Query

POST /web/api/v2.1/cloud-funnel/validate-query

Verifies that a query is valid before using it as filterfor a Cloud Funnel onboarding

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Validate Query - response - data table
errors	Errors	false	array

Validate Query - response - data

Name	Description	Required	Value
error	Error message in case the query is invalid	true	string
isValid	Query is valid or invalid	true	boolean

Body Schema

Name	Description	Required	Value
data	Data	true	see Validate Query - body - data table

Validate Query - body - data

Name	Description	Required	Value
query	Validate query	true	string

Create Estimator ID

POST /web/api/v2.1/cloud-funnel/estimator

Create estimator ID. This is needed to run the API "Get Estimate Size Of Events".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Create Estimator ID - response - data table
errors	Errors	false	array

Create Estimator ID - response - data

Name	Description	Required	Value
estimatorId	Estimator query id.	true	string
error	Error message in case the estimator query is invalid	false	string

Body Schema

Name	Description	Required	Value
data	Data	true	see Create Estimator ID - body - data table

Create Estimator ID - body - data

Name	Description	Required	Value
accountIds	Account ids	false	string []
desiredFields	List of desired fields to be included in the output. If not specified, all fields are included.	false	string []
query	Query	false	string
siteIds	Site ids	false	string []

Get estimate size of events

GET /web/api/v2.1/cloud-funnel/estimator

Get estimate size of events in the bucket. You need the estimator ID which can be generated by running the API: "Create Estimator ID".

Parameters

estimatorid	required	Estimator query id.
-------------	----------	---------------------

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get estimate size of events - response - data table
errors	Errors	false	array

Get estimate size of events - response - data

Name	Description	Required	Value
isCompleted	Is estimator query status is completed.	true	boolean
compressedBytes	Estimation of compressed size.	false	string
error	Error message in case the estimator query failed	false	string
matchingEvents	Estimation of events number. string to avoid round	false	string
uncompressedBytes	Estimation of uncompressed size.	false	string

Get AWS assume role external ID.

GET /web/api/v2.1/cloud-funnel/assume-role-external-id

Get the AWS assume role external ID.

Parameters

accountid	optional	Account id. Example: "225494730938493804".
siteid	optional	Site id. Example: "225494730938493804".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get AWS assume role external ID. - response - data table
errors	Errors	false	array

Get AWS assume role external ID. - response - data

Name	Description	Required	Value
assumeRoleExternalId	The AWS assume role external id.	true	string

Cloud Resources

Get cloud rogue resources

GET /web/api/v2.1/cloudnative/cloud-rogues

Returns the cloud rogue resources for given filter

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
cloudprovideraccountid__contains	optional	Free-text filter by cloud account id (supports multiple values)
cloudprovideraccountname	optional	Filter by cloud account (supports multiple values)
cloudprovideraccountname__contains	optional	Free-text filter by cloud account (supports multiple values)
cloudprovidername	optional	Filter by cloud provider name (supports multiple values)
concatenatedtags__contains	optional	Free-text filter by tags (supports multiple values)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
id__contains	optional	Free-text filter by id (supports multiple values)

imageid__contains	optional	Free-text filter by image (supports multiple values)
limit	optional	Limit number of returned items (1-1000). Example: "10".
name__contains	optional	Free-text filter by resource name (supports multiple values)
ostypes	optional	Included OS types
region	optional	Filter by region (supports multiple values)
region__contains	optional	Free-text filter by region (supports multiple values)
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
virtualnetworkid__contains	optional	Free-text filter by network id (supports multiple values)

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get cloud rogue resources - response - pagination table
data	Response data	false	see Get cloud rogue resources - response - data table
errors	Errors	false	array

Get cloud rogue resources - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get cloud rogue resources - response - data

Name	Description	Required	Value
resources	Resources	false	see Get cloud rogue resources - response - resources table

Get cloud rogue resources - response - resources

Name	Description	Required	Value
cloudProviderAccountId		false	string
cloudProviderAccountName		false	string
cloudProviderName		false	string
cloudProviderOrganization		false	string
concatenatedTags		false	string
createdTime		false	string
id	Cloud Resource ID	false	string
imageId		false	string
internalResourceType		false	string
name		false	string
osType		false	string
osTypeIcon		false	string
region		false	string

resourceType		false	string
tags		false	
virtualNetworkId		false	string

Export cloud rogue resources to csv (default) or json

GET /web/api/v2.1/cloudnative/cloud-rogues/export

Returns the results for given cloud rogues filter in a csv (default) or json format

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
cloudprovideraccountid__contains	optional	Free-text filter by cloud account id (supports multiple values)
cloudprovideraccountname	optional	Filter by cloud account (supports multiple values)
cloudprovideraccountname__contains	optional	Free-text filter by cloud account (supports multiple values)
cloudprovidername	optional	Filter by cloud provider name (supports multiple values)
concatenatedtags__contains	optional	Free-text filter by tags (supports multiple values)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
exportformat	optional	Export format. Example: "csv".
id__contains	optional	Free-text filter by id (supports multiple values)
imageid__contains	optional	Free-text filter by image (supports multiple values)
limit	optional	Limit number of returned items (1-1000). Example: "10".
name__contains	optional	Free-text filter by resource name (supports multiple values)
ostypes	optional	Included OS types
region	optional	Filter by region (supports multiple values)

region__contains	optional	Free-text filter by region (supports multiple values)
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
virtualnetworkid__contains	optional	Free-text filter by network id (supports multiple values)

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Config Overrides

Get Config Overrides

GET /web/api/v2.1/config-override

There are different ways to override the configuration of an Agent, and the priority of changes depends on the endpoint OS and the version of the installed Agent. Use this command to see the configuration values that are changed for each Agent that matches the filter.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
agentids	optional	List of Agent IDs to filter by. Example: "225494730938493804,225494730938493915".

agentversions	optional	Included agent versions. Example: "2.5.1.1320".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdat__gt	optional	Config Overrides created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Config Overrides created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Config Overrides created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Config Overrides created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
description__like	optional	Match description partially (substring)
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of ids to filter by. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".
name__like	optional	Match name partially (substring)
ostypes	optional	Included OS types. Example: "linux".
query	optional	Free text search on fields name, description, agent_version, os_type, config
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".

sortorder	optional	Sort direction. Example: "asc".
tenant	optional	Indicates a tenant scope request
versionoption	optional	Version option. Example: "ALL".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Create Config Override

POST /web/api/v2.1/config-override

Override the configuration of Agents that match the filter. Best practice: Run "support-actions/config" to get the complete syntax. This command requires a Global user or Support.

BEST PRACTICE

Run "support-actions/config" to get the complete syntax. This command requires a Global user or Support.

Custom Detection Rule

Get Rules

GET /web/api/v2.1/cloud-detection/rules

Get a list of Custom Detection Rules for a given scope.

Note: You can create and see rules only for your highest available scope. For example, if your username has an access level of scope Account, you cannot see rules created for the Global scope or rules created for a specific Site.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
activeresponse	optional	The active response status for the rule.
attacksurfaces	optional	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release.
categories	optional	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release. Example: "Events".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
creator__contains	optional	Free-text filter by rule creator. You can enter multiple values, separated by commas. Example: "Service Pack 1".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
description__contains	optional	Free-text filter by rule description. You can enter multiple values, separated by commas. Example: "Service Pack 1".

descriptionsubstring	optional	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release.
disablepagination	optional	If True, all rules for the requested scope will be returned.
excludeids	optional	List of entity ids to exclude from select_all. Example: "225494730938493804,225494730938493915".
expirationmode	optional	The expiration mode. Example: "Permanent".
expired	optional	Rule expired or not.
filterby	optional	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release. Example: "Template".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
hidequery	optional	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release. Example: "Shown".
ids	optional	To filter by Rule ID, enter one or more Rule IDs, separated by commas. Example: "225494730938493804,225494730938493915".
includehiddenlogicrules	optional	If True and isLegacy is True, include rules whose logic is hidden. The query content will still be masked for non-privileged users.
includescheduledrules	optional	If True, includes scheduled rules. Requires isLegacy=false.
islegacy	optional	If True, alertsCount will be retrieved from Star and not from UAM.
labels	optional	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release.
limit	optional	Limit number of returned items (1-1000). Example: "10".
mitretactics	optional	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release.
name__contains	optional	Free-text filter by rule name. You can enter multiple values, separated by commas. Example: "Service Pack 1".
namesubstring	optional	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release.
platformruleids	optional	platform rule ids. Example: "225494730938493804,225494730938493915".
query	optional	Free-text filter by S1 query. You can enter multiple values, separated by commas. Example: "Service Pack 1".
querytype	optional	Enter a list of query types. Example: "events".

reachedlimit	optional	Rule reached limit or not.
s1ql__contains	optional	Free-text filter by S1 query. You can enter multiple values, separated by commas. Example: "Service Pack 1".
s1qlsubstring	optional	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release.
scopeid	optional	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release. Example: "225494730938493804".
scopelevel	optional	To filter by scope, enter one or more scopes, separated by commas. Example: "group".
scopes	optional	To filter by scope, enter one or more scopes, separated by commas. Example: "group".
severities	optional	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release. Example: "Info".
severity	optional	To filter by severity, enter one or more severities, separated by commas. Example: "Info".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
sources	optional	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release.
status	optional	To filter by status, enter one or more statuses, separated by commas. Example: "Draft".
statuses	optional	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release. Example: "Activating".
tags	optional	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Rules - response - pagination table
data	Response data	false	see Get Rules - response - data table
errors	Errors	false	array

Get Rules - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Rules - response - data

Name	Description	Required	Value
expirationMode	Whether the rule is Temporary or Permanent.	true	enum
name	The name of the custom detection rule.	true	string
severity	The rule severity in your environment.	true	enum
status	Enabled (Activated and sends alerts if triggered) or Disabled.	true	enum
accountId	The account ID.	false	string
accountName	The name of the account.	false	string
activeResponse	The Active Response status of the Rule.	false	boolean
coolOffSettings	Receive only one alert and suppress additional alerts when a rule is triggered multiple times during the cool-off period. Mitigation actions set in the rule will not be applied to suppressed alerts.	false	see Get Rules - response - coolOffSettings table
correlationParams	Correlation params	false	see Get Rules - response - correlationParams table
createdAt	The date the rule was created.	false	string
creator	The full name of the user that created the rule.	false	string

creatorId	The ID of the user that created the rule.	false	string
description	The description of the custom detection rule.	false	string
editable	True if the rule can be modified at this scope level.	false	boolean
enrichment	Enrichment	false	see Get Rules - response - enrichment table
entityMappings	List of OCSF entity mappings to associate alerts with specific assets.	false	see Get Rules - response - entityMappings table
expiration	If Temporary, the expiration date for the rule.	false	string
expired	True if the Rule has expired.	false	boolean
generatedAlerts	The number of alerts that have been generated for the Rule.	false	integer
hideLogic	If true, this rule's logic is hidden from non-privileged users.	false	boolean
id	Rule ID	false	string
lastAlertTime	The time of the last alert for the Rule.	false	string
networkQuarantine	True if the network quarantine is on.	false	boolean
queryLang	The s1ql version query language of the rule. Can be 1.0 or 2.0.	false	enum
queryType	The query type - Correlation (made of multiple subqueries), Event (single query).	false	enum
reachedLimit	True if the Rule reached the 5k/hour or 10k/day alert limit. If the limit has been reached, the Rule is disabled.	false	boolean
s1ql	The query.	false	string
scheduledParams	Scheduled params	false	see Get Rules - response - scheduledParams table
scope	The scope of the rule. Can be Global, Account, Site, or Group.	false	enum
scopeId	The Account, Site, or Group ID, depending on the scope. Null if the scope is Global.	false	string []
siteId	The site ID.	false	string
siteName	The name of the site.	false	string
source	The source of the rule. Present for	false	enum

	Detection-as-Code managed rules.		
statusReason	The reason why the Rule has its current status.	false	string
templateRuleId	Rule Id of template rule from which this rule was created.	false	
treatAsThreat	The Treat as threat auto response - UNDEFINED/suspicious/malicious	false	enum
updatedAt	The date the rule was last updated.	false	string
updateId	The ID of the user that last updated the rule.	false	string

Get Rules - response - coolOffSettings

Name	Description	Required	Value
renotifyMinutes	The period of time in minutes in which alerts will be suppressed after the rule has been triggered.	true	integer

Get Rules - response - correlationParams

Name	Description	Required	Value
entity	A common entity used to group matching events.	true	enum
matchInOrder	Set to True to require subqueries to match in sequence to trigger an alert.	true	boolean
subQueries	The list of subqueries for the custom detection rule.	false	see Get Rules - response - subQueries table
timeWindow	The period of time in minutes in which subqueries must match to trigger an alert.	false	see Get Rules - response - timeWindow table

Get Rules - response - subQueries

Name	Description	Required	Value
------	-------------	----------	-------

matchesRequired	The number of times a subquery must match.	true	integer
subQuery	A subquery	true	string

Get Rules - response - timeWindow

Name	Description	Required	Value
windowMinutes	The period of time in minutes in which subqueries must match to trigger an alert.	false	enum

Get Rules - response - enrichment

Name	Description	Required	Value
creator	The ID of the user that created the Rule.	false	string
scopeName	scope id	false	string
updater	The ID of the user that last updated the Rule.	false	string

Get Rules - response - entityMappings

Name	Description	Required	Value
assetProperty	Asset unique identifier property (e.g., device_uuid, hostname_fqdn for Endpoint; ad_id, aad_id, sid, domain_username, upn for Identity; aws_arn, azure_resource_id, entra_id_object_id, gcp_resource_name, gcp_iam_user for Cloud)	true	string
assetSurface	Asset surface: Endpoint, Cloud, or Identity	true	enum
columnName	Unique case insensitive column name from PowerQuery table result	false	string

	(required for Scheduled rules)		
--	--------------------------------	--	--

Get Rules - response - scheduledParams

Name	Description	Required	Value
lookbackWindowMinutes	Sets the evaluation lookback window in minutes. For example, set to 5 evaluates the alert over the past five minutes.	true	integer
query	The PowerQuery to run	true	string
runIntervalMinutes	How often the alert is evaluated, in minutes. If used with coolOffSettings then it must be a denominator of renotifyMinutes. If the lookbackWindowMinutes is less than 60 (1 hour), the minimum is 1 minute. For a window between 1 and 360 (6 hours), 5 minutes. For a window between 360 (6 hours) and 10080 (7 days), 15 minutes. For a window between 10080 (7 days) and 43200 (30 days), 60 minutes.	true	integer
alertPerRow	If True, an alert will be generated for each row detected in the defined lookback window. If False (default), get one alert for all detected events matched in the defined lookback window.	false	boolean
disableStreaksLogic	If True (default), disables streak counting logic for scheduled rules. If False, streak counting logic is enabled.	false	boolean
threshold	Receive an alert only if the number of rows in the result of the query matches the condition in the threshold	false	see Get Rules - response - threshold table

Get Rules - response - threshold

Name	Description	Required	Value
operator	Defines the operator to use in combination with the query and thresholdValue to set the threshold condition for an alert to trigger The default value is Greater	false	enum
value	Defines the threshold value that in combination with operator and the query sets the threshold condition for an alert to be triggered. The default value is 0	false	integer

Create Rule

POST /web/api/v2.1/cloud-detection/rules

Create a Custom Detection Rule for a scope specified by ID. To get the ID, run "accounts", "sites", "groups", or set "tenant" to "true" for Global.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

hideLogic	If true, hide this rule logic from non-privileged users.	false	boolean
id	Rule ID	false	string
networkQuarantine	Set to True to automatically quarantine the alerted endpoints.	false	boolean
queryLang	Defines the s1ql version query language of the rule - 1.0 or 2.0.	false	enum
s1ql	The query	false	string
scheduledParams	Scheduled params	false	see Create Rule - body - scheduledParams table

templateRuleId	Rule Id of template rule from which this rule was created.	false	string
treatAsThreat	Defines the Treat as a threat auto response. Undefined, Suspicious, or Malicious.	false	enum

Create Rule - body - coolOffSettings

Name	Description	Required	Value
renotifyMinutes	The period of time in minutes in which alerts will be suppressed after the rule has been triggered.	true	integer

Create Rule - body - correlationParams

Name	Description	Required	Value
entity	A common entity used to group matching events.	true	enum
matchInOrder	Set to True to require subqueries to match in sequence to trigger an alert.	true	boolean
subQueries	The list of subqueries for the custom detection rule.	false	see Create Rule - body - subQueries table
timeWindow	The period of time in minutes in which subqueries must match to trigger an alert.	false	see Create Rule - body - timeWindow table

Create Rule - body - subQueries

Name	Description	Required	Value
matchesRequired	The number of times a subquery must match.	true	integer
subQuery	A subquery	true	string

Create Rule - body - timeWindow

Name	Description	Required	Value
windowMinutes	The period of time in minutes in which subqueries must match to trigger an alert.	false	enum

Create Rule - body - entityMappings

Name	Description	Required	Value
assetProperty	Asset unique identifier property (e.g., device_uuid, hostname_fqdn for Endpoint; ad_id, aad_id, sid, domain_username, upn for Identity; aws_arn, azure_resource_id, entra_id_object_id, gcp_resource_name, gcp_iam_user for Cloud)	true	string
assetSurface	Asset surface: Endpoint, Cloud, or Identity	true	enum
columnName	Unique case insensitive column name from PowerQuery table result (required for Scheduled rules)	false	string

Create Rule - body - scheduledParams

Name	Description	Required	Value
lookbackWindowMinutes	Sets the evaluation lookback window in minutes. For example, set to 5 evaluates the alert over the past five minutes.	true	integer
query	The PowerQuery to run	true	string
runIntervalMinutes	How often the alert is evaluated, in minutes. If used with coolOffSettings then it must be a denominator of renotifyMinutes. If the lookbackWindowMinutes is less than 60 (1 hour), the minimum is 1 minute. For a window between 1 and 360 (6 hours), 5 minutes. For a window	true	integer

	between 360 (6 hours) and 10080 (7 days), 15 minutes. For a window between 10080 (7 days) and 43200 (30 days), 60 minutes.		
alertPerRow	If True, an alert will be generated for each row detected in the defined lookback window. If False (default), get one alert for all detected events matched in the defined lookback window.	false	boolean
disableStreaksLogic	If True (default), disables streak counting logic for scheduled rules. If False, streak counting logic is enabled.	false	boolean
threshold	Receive an alert only if the number of rows in the result of the query matches the condition in the threshold	false	see Create Rule - body - threshold table

Create Rule - body - threshold

Name	Description	Required	Value
operator	Defines the operator to use in combination with the query and thresholdValue to set the threshold condition for an alert to trigger The default value is Greater	false	enum
value	Defines the threshold value that in combination with operator and the query sets the threshold condition for an alert to be triggered. The default value is 0	false	integer

Create Rule - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
groupIds	List of Group IDs to filter by	false	string []

sitelds	List of Site IDs to filter by	false	string []
tenant	Indicates a tenant scope request	false	boolean

Delete Rules

DELETE /web/api/v2.1/cloud-detection/rules

Deletes Custom Detection Rules that match a filter.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value

sources	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release.	false	string []
status	To filter by status, enter one or more	false	string []

	statuses, separated by commas.		
statuses	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release.	false	string []
tags	The API ignores this field. It's kept for backward compatibility only, and will be removed in a future release.	false	string []

Update Rule

PUT /web/api/v2.1/cloud-detection/rules/{rule_id}

Change a Custom Detection rule.

This command requires the rule ID. (See Get Rules).

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

404 - Custom Detection rule not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Update Rule - response - data table
errors	Errors	false	array

Update Rule - response - data

Name	Description	Required	Value
expirationMode	Whether the rule is Temporary or Permanent.	true	enum
name	The name of the custom detection rule.	true	string
severity	The rule severity in your environment.	true	enum
status	Enabled (Activated and sends alerts if triggered) or Disabled.	true	enum
coolOffSettings	Receive only one alert and suppress additional alerts when a rule is triggered multiple times during the cool-off period. Mitigation actions set in the rule will not be applied to suppressed alerts.	false	see Update Rule - response - coolOffSettings table
correlationParams	Correlation params	false	see Update Rule - response - correlationParams table
createdAt	The date the rule was created.	false	string
creator	The full name of the user that created the rule.	false	string
creatorId	The ID of the user that created the rule.	false	string
description	The description of the custom detection rule.	false	string
editable	True if the rule can be modified at this scope level.	false	boolean
entityMappings	List of OCSF entity mappings to associate alerts with specific assets.	false	see Update Rule - response - entityMappings table
expiration	If Temporary, the expiration date for the rule.	false	string
expired	True if the Rule has expired.	false	boolean
hideLogic	If true, this rule's logic is hidden from non-privileged users.	false	boolean
id	Rule ID	false	string
networkQuarantine	True if the network quarantine is on.	false	boolean

queryLang	The s1ql version query language of the rule. Can be 1.0 or 2.0.	false	enum
queryType	The query type - Correlation (made of multiple subqueries), Event (single query).	false	enum
reachedLimit	True if the Rule reached the 5k/hour or 10k/day alert limit. If the limit has been reached, the Rule is disabled.	false	boolean
s1ql	The query.	false	string
scheduledParams	Scheduled params	false	see Update Rule - response - scheduledParams table
scope	The scope of the rule. Can be Global, Account, Site, or Group.	false	enum
scopeId	The Account, Site, or Group ID, depending on the scope. Null if the scope is Global.	false	string []
statusReason	The reason why the Rule has its current status.	false	string
templateRuleId	Rule Id of template rule from which this rule was created.	false	
treatAsThreat	The Treat as threat auto response - UNDEFINED/suspicious/malicious	false	enum
updatedAt	The date the rule was last updated.	false	string
updaterId	The ID of the user that last updated the rule.	false	string

Update Rule - response - coolOffSettings

Name	Description	Required	Value
renotifyMinutes	The period of time in minutes in which alerts will be suppressed after the rule has been triggered.	true	integer

Update Rule - response - correlationParams

Name	Description	Required	Value
------	-------------	----------	-------

entity	A common entity used to group matching events.	true	enum
matchInOrder	Set to True to require subqueries to match in sequence to trigger an alert.	true	boolean

Body Schema

Name	Description	Required	Value
actionPath	Action path	false	string
id__in	List of selected entity ids	false	object
id__nin	List of entity ids to exclude from select_all	false	object
payload	Payload	false	

Internal api only to notify action was triggered without actually performing it

POST /web/api/v2.1/xdr/action-controller/perform-unified-action/notify

Internal api only to notify action was triggered without actually performing it

Parameters

accountids	optional	List of Account IDs to filter by
groupids	optional	List of Group IDs to filter by
siteids	optional	List of Site IDs to filter by

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Body Schema

Name	Description	Required	Value
actionPath	Action path	true	string
notifyOnly	Notify only	true	enum
id__in	List of selected entity ids	false	object
id__nin	List of entity ids to exclude from select_all	false	object
payload	Payload	false	

Deep Visibility

[DEPRECATED] Create Query and Get QueryId

POST /web/api/v2.1/dv/init-query

Start a Deep Visibility Query and get the queryId. You can use the queryId for other commands, such as Get Events and Get Query Status. For complete query syntax, see Query Syntax in the Knowledge Base (community.sentinelone.com) or the Console Help. Only SentinelOne Deep Visibility Query Language (S1QL 1.0) syntax is supported. SentinelOne Deep Visibility extends the ActiveEDR capabilities, with full visibility into endpoint data and threat hunting. Its kernel-based monitoring searches across endpoints for all indicators of compromise (IOC).
Note: From Management version Rio (February 2022) the default of "isVerbose" is "false" instead of "true".
Deep Visibility requires Complete SKU.

Response Messages

- 200 - Success
- 400 - Invalid user input received. See error details for further information.
- 401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see [DEPRECATED] Create Query and Get QueryId - response - data table
errors	Errors	false	array

[DEPRECATED] Create Query and Get QueryId - response - data

Name	Description	Required	Value
queryId	A query unique identifier	true	string
queryModelInfo	Query mode info	false	see [DEPRECATED] Create Query and Get QueryId - response - queryModelInfo table

[DEPRECATED] Create Query and Get QueryId - response - queryModelInfo

Name	Description	Required	Value
mode	The query mode	true	string
lastActivatedAt	The query mode last_activated_at date	false	string

Body Schema

Name	Description	Required	Value
fromDate	Events created after this timestamp	true	string
query	Events matching the query search term will be returned	true	string
toDate	Events created before or at this timestamp	true	string
accountIds	List of Account IDs to filter by	false	string []
isVerbose	Show all fields or just priority fields	false	boolean
limit	Limit number of returned items (1-100000)	false	integer
queryType	Query Search Type - only one is allowed	false	string []
siteIds	List of Site IDs to filter by	false	string []
timeFrame	Time frame that the query was performed on, when omitted defaults to "Last 48 Hours"	false	string

[DEPRECATED] Cancel Running Query

POST /web/api/v2.1/dv/cancel-query

Stop a Deep Visibility Query by queryId. The body is {"queryID":"string_ID"}. Get the ID of the Deep Visibility query or Power Query from "init-query". See "Create Query and get QueryId".

Deep Visibility requires Complete SKU.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see [DEPRECATED] Cancel Running Query - response - data table
errors	Errors	false	array

[DEPRECATED] Cancel Running Query - response - data

Name	Description	Required	Value
success	request success status	true	string

Body Schema

Name	Description	Required	Value
queryId	QueryId obtained when creating a query under Create Query	true	string

[DEPRECATED] Get Query Status

GET /web/api/v2.1/dv/query-status

Get that status of a Deep Visibility Query. When the status is FINISHED, you can get the results with the queryId in "Get Events".

Deep Visibility requires Complete SKU.

Rate limit: 1 call per second for each different user token.

responseState can return these values: EMPTY_RESULTS, EVENTS_RUNNING, FAILED, FAILED_CLIENT, FINISHED, PLANNING, PROCESS_RUNNING, QUERY_CANCEL, QUERY_EXPIRED, QUERY_NOT_FOUND, QUERY_RUNNING, RUNNING, TIMED_OUT.

Parameters

queryId	required	QueryId obtained when creating a query under Create Query. Example: "q1xx2xx3".
---------	----------	--

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see [DEPRECATED] Get Query Status - response - data table
errors	Errors	false	array

[DEPRECATED] Get Query Status - response - data

Name	Description	Required	Value
progressStatus	Query loading status in percentage	true	integer
responseState	Response state	true	enum
queryModelInfo	Query mode info	false	see [DEPRECATED] Get Query Status - response - queryModelInfo table
responseError	Relevant only for FAILED and FAILED_CLIENT DV errors	false	string
warnings	Warnings	false	string

[DEPRECATED] Get Query Status - response - queryModelInfo

Name	Description	Required	Value
mode	The query mode	true	string
lastActivatedAt	The query mode last_activated_at date	false	string

[DEPRECATED] Get Events

GET /web/api/v2.1/dv/events

Get all Deep Visibility events from a queryId. You can use this command to send a sub-query, a new query to run on these events. Get the ID from "init-query". See "Create Query and get QueryId".

For complete documentation, see Query Syntax in the Knowledge Base (support.sentinelone.com) or the Console Help.

Parameters

queryid	required	QueryId obtained when creating a query under Create Query. Example: "q1xx2xx3".
cursor	optional	Cursor position returned by the last request. Should be used instead of skip. cursor currently supports sort by with createdAt, pid, processStartTime
limit	optional	Limit number of returned items (1-1000). Example: "10".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000

		items, use "cursor". Example: "150".
sortby	optional	Events sorted by field. Example: "createdAt".
sortorder	optional	Event sorting order. Example: "asc".
subquery	optional	Create a sub query to run on the data that was already pulled

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

[DEPRECATED] Get Process State

GET /web/api/v2.1/dv/process-state

Get details of all Deep Visibility processes from a queryId. To get the ID from "init-query". See "Create Query and get QueryId".

Parameters

queryid	required	QueryId obtained when creating a query under Create Query. Example: "q1xx2xx3".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
limit	optional	Limit number of returned items (1-1000). Example: "10".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
sortBy	optional	Events sorted by field. Example: "SrcProcStartTime".
sortorder	optional	Event sorting order. Example: "asc".

Response Messages

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

[DEPRECATED] Get Events By Type

GET /web/api/v2.1/dv/events/{event_type}

Get Deep Visibility results from the query that matches the given event type. Valid event_type values below shown as "event_type - (objectTypes)":

process - (Process Exit, Process Modification, Process Creation, Duplicate Process Handle, Duplicate Thread Handle, Open Remote Process Handle, Remote Thread Creation, Remote Process Termination, Command Script)

ip - (IP Connect, IP Listen)

file - (File Modification, File Creation, File Scan, File Deletion, File Rename, Pre Execution Detection)

logins - (Login, Logout)

url - (GET, OPTIONS, POST, PUT, DELETE, CONNECT, HEAD)

dns - (DNS Resolved, DNS Unresolved)

scheduled_task - (Task Register, Task Update, Task Start, Task Trigger, Task Delete)

registry - (Registry Key Create, Registry Key Rename, Registry Key Delete, Registry Key Export, Registry Key Security Changed, Registry Key Import, Registry Value Modified, Registry Value Create, Registry Value Delete)

indicators - (Behavioral Indicators)

module - (Module Load)

Parameters

queryid	required	QueryId obtained when creating a query under Create Query. Example: "q1xx2xx3".
cursor	optional	Cursor position returned by the last request. Should be used instead of skip. cursor currently supports sort by with createdAt, pid, processStartTime
limit	optional	Limit number of returned items (1-1000). Example: "10".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
sortby	optional	Events sorted by field. Example: "createdAt".
sortorder	optional	Event sorting order. Example: "asc".
subquery	optional	Create a sub query to run on the data that was already pulled

Response Messages

		false	undefined []

Body Schema

Name	Description	Required	Value
fromDate	Events created after this timestamp	true	string
query	Events matching the query search term will be returned	true	string
toDate	Events created before or at this timestamp	true	string
accountIds	List of Account IDs to filter by	false	string []

limit	Limit number of returned items (1-100000)	false	integer
sitelds	List of Site IDs to filter by	false	string []

[DEPRECATED] Ping a Power Query if results haven't been retrieved

GET /web/api/v2.1/dv/events/pq-ping

Ping a Deep Visibility Power Query using the queryId if results have not returned from an initial Power Query or a previous ping.

Use pq-ping soon after initiating a Power Query via the /web/api/v2.1/dv/events/pq endpoint.

It is recommended to create a script that initiates the Power Query and then pings the query every few seconds to check the status and retrieve results when they are ready.

If the ping is run after a significant delay, it may result in a 503 Service Unavailable response. This indicates that the results are no longer available due to cache eviction.

Parameters

queryid	optional	QueryId query param
---------	----------	---------------------

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

Get Default Reports

GET /web/api/v2.1/reports

Get the default reports that match the filter and the data of the reports. Default Reports require Reports permission and appropriate license. Use this command to get the ID of reports to use in other commands. Other data in the response: schedule, Insight Type, name and ID of the user who created the report, the date range, and more.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__gte	optional	Created at gte. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Created at lte. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
frequency	optional	Frequency. Example: "manually".
fromdate	optional	From date. Example: "2018-02-27T04:49:26.257525Z".
id	optional	Id. Example: "225494730938493804".
ids	optional	Id in. Example: "225494730938493804,225494730938493915".
interval	optional	Interval
limit	optional	Limit number of returned items (1-1000). Example: "10".
name	optional	Name
query	optional	Query
scheduletype	optional	Report type. Example: "manually".
scope	optional	Scope. Example: "group".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.

sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
taskid	optional	Task id. Example: "225494730938493804".
todate	optional	To date. Example: "2018-02-27T04:49:26.257525Z".

Response Messages

creatorid	optional	Creator id. Example: "225494730938493804".
creatorname	optional	Creator name
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
day	optional	Day
frequency	optional	Frequency. Example: "manually".
id	optional	Id. Example: "225494730938493804".
ids	optional	Id in. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".
name	optional	Name
query	optional	Query
scheduletype	optional	Report type. Example: "manually".

scope	optional	Scope. Example: "group".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

Get Default Insight Reports

GET /web/api/v2.1/reports/insights/types

Get the Insight Report types for Default Reports. Default Reports require Reports permission and appropriate license. These reports show high-level and detailed information on the state of your endpoint security. Reports include statistics, trends, and summaries with easy to read and actionable information about your network. Use this command to see the predefined reports. This command does not give data for specific reports.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
forceupdate	optional	Force update
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".

Device Control

Get Device Rules

GET /web/api/v2.1/device-control

Get the Device Control rules of a specified Account, Site, Group or Global (tenant) that match the filter.

Parameters

accesspermissions	optional	Access permission in. Example: "Read-Only".
accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
actions	optional	Return device rules with the filtered action. Example: "Allow".
bluetoothaddresses	optional	Return device rules with the filtered bluetooth addresses.
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__between	optional	Return device rules created within this range (inclusive). Example: "1514978764288-1514978999999".
createdat__gt	optional	Return device rules created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".

createdat__gte	optional	Return device rules created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Return device rules created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Return device rules created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
deviceclasses	optional	Return device rules with the filtered device class. Example: "02h".
deviceids	optional	Return device rules with the filtered device id. Example: "02".
deviceinformationserviceinfokeys	optional	Return device rules with the filtered device information service info keys.
devicenames	optional	Return device rules with the filtered device names.
disablepagination	optional	If true, all rules for requested scope will be returned
gattservices	optional	Return device rules with the filtered GATT services.
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of ids to filter by. Example: "225494730938493804,225494730938493915".
interfaces	optional	Return device rules with the filtered interface. Example: "USB".
limit	optional	Limit number of returned items (1-1000). Example: "10".
manufacturernames	optional	Return device rules with the filtered manufacturer names.
minorclasses	optional	Return device rules with the filtered minor classes.
productids	optional	Return device rules with the filtered product id. Example: "02".
query	optional	A free-text search term, will match applicable attributes.
rulename	optional	Return device rules with the filtered rule name.
scopes	optional	Return only device rules in this scope. Example: "account".
serviceclasses	optional	Return device rules with the filtered service class. Example: "02".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".

skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
statuses	optional	Return device rules with the filtered status. Example: "Enabled".
tenant	optional	Indicates a tenant scope request
uids	optional	Return device rules with the filtered uid.
vendorids	optional	Return device rules with the filtered vendor id.
versions	optional	Return device rules with the filtered versions.

Create Device Control Rule

POST /web/api/v2.1/device-control

Use this command to create a new Device Control rule. These rules allow or block devices, based on device identifiers. Rules apply to a scope: Global (tenant), Account, Site, or Group. To learn details of the fields, see <https://support.sentinelone.com/hc/en-us/articles/360023338494>.

Recommended: Before you begin, see Device Control Known Limitations: <https://support.sentinelone.com/hc/en-us/articles/360021104114>.

Device Control requires Control SKU. Linux Agents do not support Device Control.

Copy Rules

POST /web/api/v2.1/device-control/copy-rules

You can copy a set of Device Control rules to use in other Accounts, Sites, or Groups. Copy the rules from a source Group, Site, or Account to target Groups, Sites, or Accounts.

Define the rules to copy with the filters. To get the values for devices, run "unscoped". To get Account IDs, run "accounts". To get Site IDs, run "sites".

Device Control requires Control SKU. Linux Agents do not support Device Control.

accessPermissions	Access permission in	false	string []
accountIds	List of Account IDs to filter by	false	string []
actions	Return device rules with the filtered action.	false	string []
bluetoothAddresses	Return device rules with the filtered bluetooth addresses.	false	string []
createdAt__between	Return device rules created within this range (inclusive)	false	string
createdAt__gt	Return device rules created after this timestamp.	false	string
createdAt__gte	Return device rules created after or at this timestamp.	false	string
createdAt__lt	Return device rules created before this timestamp.	false	string
createdAt__lte	Return device rules created before or at this timestamp.	false	string
deviceClasses	Return device rules with the filtered device class.	false	string []
deviceIds	Return device rules with the filtered device id.	false	string []
deviceInformationServiceInfoKeys	Return device rules with the filtered device information service info keys.	false	string []
deviceNames	Return device rules with the filtered device names.	false	string []
gattServices	Return device rules with the filtered GATT services.	false	string []
groupIds	List of Group IDs to filter by	false	string []
ids	List of ids to filter by	false	string []
interfaces	Return device rules with the filtered interface.	false	string []
manufacturerNames	Return device rules with the filtered manufacturer names.	false	string []

minorClasses	Return device rules with the filtered minor classes.	false	string []
productIds	Return device rules with the filtered product id.	false	string []
query	A free-text search term, will match applicable attributes.	false	string
ruleName	Return device rules with the filtered rule name.	false	string
scopes	Return only device rules in this scope	false	string []
serviceClasses	Return device rules with the filtered service class.	false	string []
sitelds	List of Site IDs to filter by	false	string []
statuses	Return device rules with the filtered status.	false	string []
tenant	Indicates a tenant scope request	false	boolean
uids	Return device rules with the filtered uid.	false	string []
vendorIds	Return device rules with the filtered vendor id.	false	string []
versions	Return device rules with the filtered versions.	false	string []

Copy Rules - body - data

Name	Description	Required	Value
accountId	Target account (or "null" for global scope)	false	string
groupId	Target group(s)	false	string []
siteld	Target site (or "null" for global scope)	false	string

Move rules

POST /web/api/v2.1/device-control/move-rules

You can move a set of Device Control rules to other Accounts, Sites, or Groups. This command removes the rule from the source and copies to the targets. Define the rules to copy with the filters. To get the values for devices, run "unscoped". To get Account IDs, run "accounts". To get Site IDs, run "sites". Device Control requires Control SKU. Linux Agents do not support Device Control.

groupId	Target group(s)	false	string []
siteld	Target site (or "null" for global scope)	false	string

Reorder Rules

PUT /web/api/v2.1/device-control/reorder

When an external device connects to an endpoint, the SentinelOne Agent looks at the rules based on their order in the Device Control policy, from the top to the bottom. When the Agent finds a rule that matches the device identifiers of a connected device, that rule is applied. The Agent does not continue to the lower rules in the list. Use this command to change the order of rules for a specific scope.

Device Control requires Control SKU. Linux Agents do not support Device Control.

interface	The physical bus type of the device.	true	enum
accountIds	List of Account IDs to filter by	false	string []
groupIds	List of Group IDs to filter by	false	string []
siteIds	List of Site IDs to filter by	false	string []
tenant	Indicates a tenant scope request	false	boolean

Reorder Rules - body - data

Name	Description	Required	Value
id	Rule ID	true	string
order	Desired position in the list of rules	true	integer

Get Configuration

GET /web/api/v2.1/device-control/configuration

Get Device Control configuration for a given scope.

To filter the results for a scope:

* Global - Make sure "tenant" is "true" and no other scope ID is given.

* Account - Make sure "tenant" is "false" and at least one Account ID is given.

* Site - Make sure "tenant" is "false" and at least one Site ID is given.
Device Control requires Control SKU. It is not supported on Linux.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".

tenant	optional	Indicates a tenant scope request
--------	----------	----------------------------------

Response Messages

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get Configuration - response - data table
errors	Errors	false	array

Get Configuration - response - data

Name	Description	Required	Value
disableBleCommunication	Disable Bluetooth LE Communication	false	boolean
disableRfcomm	Disable RFCOMM for Bluetooth devices	false	boolean
disallowAccessPermissionControl	Disallow access permission control (i.e. treat Read-Only rules as Read-Write)	false	boolean
enabled	Device control enabled for the scope	false	boolean
inheritedFrom	If null it means it is own policy else it will be site or global to state which policy is being inherited.	false	string
inherits	True if rules are decoupled from parent rules	false	boolean
reportApproved	Agent should report connected/disconnected events	false	boolean
reportBlocked	Agent should report blocked events	false	boolean
reportReadOnly	Agent should report 'connected as read-only' events	false	boolean

Update Configuration

PUT /web/api/v2.1/device-control/configuration

Use this command to change the Device Control configuration. Enter a Group ID, Site ID, Account ID, or "tenant = true". If you select only tenant, and the other scopes are empty, the change is applied to the Global policy.

Device Control requires Control SKU. It is not supported on Linux.

Export Rules

GET /web/api/v2.1/device-control/export

Export Device Control rules to a CSV file.

Parameters

accesspermissions	optional	Access permission in. Example: "Read-Only".
accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
actions	optional	Return device rules with the filtered action. Example: "Allow".
bluetoothaddresses	optional	Return device rules with the filtered bluetooth addresses.
createdat__between	optional	Return device rules created within this range (inclusive). Example: "1514978764288-1514978999999".
createdat__gt	optional	Return device rules created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Return device rules created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Return device rules created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Return device rules created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
deviceclasses	optional	Return device rules with the filtered device class. Example: "02h".
deviceids	optional	Return device rules with the filtered device id. Example: "02".
deviceinformationserviceinfokeys	optional	Return device rules with the filtered device information service info keys.
devicenames	optional	Return device rules with the filtered device names.
gattservices	optional	Return device rules with the filtered GATT services.
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of ids to filter by. Example: "225494730938493804,225494730938493915".
interfaces	optional	Return device rules with the filtered interface. Example: "USB".
manufacturernames	optional	Return device rules with the filtered manufacturer names.
minorclasses	optional	Return device rules with the filtered minor classes.
productids	optional	Return device rules with the filtered product id. Example: "02".
query	optional	A free-text search term, will match applicable attributes.
rulename	optional	Return device rules with the filtered rule name.

scopes	optional	Return only device rules in this scope. Example: "account".
serviceclasses	optional	Return device rules with the filtered service class. Example: "02".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
statuses	optional	Return device rules with the filtered status. Example: "Enabled".
tenant	optional	Indicates a tenant scope request
uids	optional	Return device rules with the filtered uid.
vendorids	optional	Return device rules with the filtered vendor id.
versions	optional	Return device rules with the filtered versions.

Get Device Control Events

GET /web/api/v2.1/device-control/events

Get the data of Device Control events on Windows and macOS endpoints with Device Control-enabled Agents that match the filter. Device Control requires Control SKU. Linux Agents do not support Device Control.

Parameters

accesspermissions	optional	Access permission in. Example: "Read-Only".
accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
agentids	optional	List of agent ids to filter by
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".

deviceclasses	optional	List of device classes to filter by. Example: "02h".
deviceids	optional	List of device IDs to filter by
eventids	optional	List of event IDs to filter by
eventtime__between	optional	Return events created within this range (inclusive). Example: "1514978764288-1514978999999".
eventtime__gt	optional	Return events generated after this time. Example: "2018-02-27T04:49:26.257525Z".
eventtime__gte	optional	Return events generated after or at this time. Example: "2018-02-27T04:49:26.257525Z".
eventtime__lt	optional	Return events generated before this time. Example: "2018-02-27T04:49:26.257525Z".
eventtime__lte	optional	Return events generated before or at this time. Example: "2018-02-27T04:49:26.257525Z".
eventtypes	optional	List of event types to filter by.
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of IDs to filter by. Example: "225494730938493804,225494730938493915".
interfaces	optional	List of interfaces to filter by. Example: "USB".
limit	optional	Limit number of returned items (1-1000). Example: "10".
productids	optional	List of product IDs to filter by. Example: "02".
query	optional	A free-text search term, will match applicable attributes.
serviceclasses	optional	List of service classes to filter by. Example: "02".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
tenant	optional	Indicates a tenant scope request
uids	optional	List of uids to filter by.

vendorids	optional	List of vendor IDs to filter by.

Enable/Disable Rules

PUT /web/api/v2.1/device-control/enable

It is best practice to disable a rule rather than delete it. Use this command to change the status of a rule between Enabled and Disabled.

Note: On Windows, if a USB device is already connected to an endpoint, new rules and rule changes do not affect it. USB rules will apply the next time the device connects to the endpoint. For Windows Bluetooth rules, the device and endpoint must be paired after the SentinelOne Agent that supports Bluetooth is installed or upgraded. If the endpoint and device were already paired before the Agent supported bluetooth, reboot the endpoint to activate the rule, or re-pair the endpoint and device.

On macOS, changes apply to devices that are already connected to an endpoint.

Dynamic tag rules

Get all tags rules

GET /web/api/v2.1/xdr/assets/tags/rules

Get all tags rules

Parameters

accountids	optional	List of Account IDs to filter by
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdbyemail	optional	Filter by created by emails of the tag rules.
createdbyemail__nin	optional	Negative filter by created by emails of the tag rules.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
description	optional	Filter by description of the tag rules.
description__nin	optional	Negative filter by descriptions of the tag rules.
groupids	optional	List of Group IDs to filter by
ids	optional	The list of tag rule ID identifiers.
limit	optional	Limit number of returned items (1-1000)
name	optional	Filter by names of the tag rules.
name__nin	optional	Negative filter by names of the tag rules.
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
status	optional	Status
tagids	optional	The list of tag identifiers that the rule is associated with.
updatedbyemail	optional	Filter by updated by emails of the tag rules.
updatedbyemail__nin	optional	Negative filter by updated by emails of the tag rules.

Check how many assets this tag rule matches

POST /web/api/v2.1/xdr/assets/tags/rules/test

Check how many assets this tag rule matches

Parameters

accountids	optional	List of Account IDs to filter by
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.

cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
groupids	optional	List of Group IDs to filter by
limit	optional	Limit number of returned items (1-1000)
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

Exclusions and Blocklist

Import Exclusions

POST /web/api/v2.1/exclusions/import

Upload a CSV file that contains exclusion entries to import to a scope in your Management

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Import Exclusions - response - data table
errors	Errors	false	array

Import Exclusions - response - data

Name	Description	Required	Value
reportId	The ID of the Validation Report generated for the import. It can help you fix entries that did not import successfully.	false	string
succeeded	The number of entries that imported successfully	false	integer
total	The number of rows in the file	false	integer

Body Schema

Name	Description	Required	Value
formData		false	see Import Exclusions - body - formData table

Import Exclusions - body - formData

Name	Description	Required	Value
file	The input CSV file	true	file
filter	The details of the scope where the entities will be imported, for example: For Global - '{"tenant":true}' For an Account - '{"accountIds":["225494730938493804"]}' For a Site - '{"siteIds":["225494730938493804"]}' For a Group - '{"groupIds":["225494730938493804"]}'	false	string

Get Exclusion Import Validation Report

GET /web/api/v2.1/exclusions/report/{report_id}

Get the Validation Report generated for the import to help you fix entries that did not import successfully

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

Import Blocklist Items

POST /web/api/v2.1/restrictions/import

Upload a CSV file that contains blocklist entries to import to a scope in your Management

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Import Blocklist Items - response - data table
errors	Errors	false	array

Import Blocklist Items - response - data

Name	Description	Required	Value
reportId	The ID of the Validation Report generated for the import. It can help you fix entries that did not import successfully.	false	string
succeeded	The number of entries that imported successfully	false	integer
total	The number of rows in the file	false	integer

Body Schema

Name	Description	Required	Value
formData		false	see Import Blocklist Items - body - formData table

Import Blocklist Items - body - formData

Name	Description	Required	Value
file	The input CSV file	true	file
filter	The details of the scope where the entities will be imported, for example: For Global - '{"tenant":true}' For an Account - '{"accountIds":["225494730938493804"]}' For a Site - '{"siteIds":["225494730938493804"]}' For a Group - '{"groupIds":["225494730938493804"]}'	false	string

Get Blocklist Import Validation Report

GET /web/api/v2.1/restrictions/report/{report_id}

Get the Validation Report generated for the import to help you fix entries that did not import successfully

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

Get Exclusions

GET /web/api/v2.1/exclusions

Get a list of all the Exclusions that match the filter.

Note: To filter the results for a scope:

- * Global - Make sure "tenant" is "true" and no other scope ID is given.
- * Account - Make sure "tenant" is "false" and at least one Account ID is given.
- * Site - Make sure "tenant" is "false" and at least one Site ID is given.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
applicationname__contains	optional	Free-text filter by application name
childprocess	optional	Child process
conditions	optional	Conditions in. Example: "white_hash".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdat__gt	optional	Created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
description__contains	optional	Free-text filter by description
engines	optional	Engine in. Example: "suppress".
exclusionname__contains	optional	Exclusion name like any
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of IDs to filter by. Example: "225494730938493804,225494730938493915".
imported	optional	Filter by import status: true (imported), false (not imported), or both for multiselect
inappinventory	optional	Found or Not found - indicates if this exclusion is related to an application found in the scope's Application Inventory.

includechildren	optional	Return filters from children scope levels (Default: false)
includeparents	optional	Return filters from parent scope levels (Default: false)
interactionlevel	optional	Interaction level in. Example: "disable_all_monitors".
limit	optional	Limit number of returned items (1-1000). Example: "10".
modes	optional	List of modes to filter by (Path exclusions only). Example: "suppress".
modetype	optional	Mode type. Example: "all".
notrecommended	optional	Not recommended in. Example: "Not recommended".
ostypes	optional	List of Os types to filter by. Example: "linux".
pathexclusiontypes	optional	List of excluded paths in an exclusion (Path exclusions only). Example: "file".
query	optional	A free-text search term, will match applicable attributes
recommendations	optional	List of recommendations to filter by. Example: "Not recommended".
scopepath__contains	optional	Scope path like any
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
source	optional	List sources to filter by. Example: "user".
tenant	optional	Indicates a tenant scope request
threatype	optional	Threat type in. Example: "EDR".
type	optional	Type. Example: "path".
types	optional	Type in. Example: "path".
unified	optional	Unified
updatedat__between	optional	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
updatedat__gt	optional	Updated after this timestamp. Example: "2018-02-27T04:49:26.257525Z".

updatedat__gte	optional	Updated after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Updated before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Updated before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
user__contains	optional	Free-text filter by user name
userids	optional	List of user ids to filter by. Example: "225494730938493804,225494730938493915".
value	optional	Value
value__contains	optional	Free-text filter by value

groupIds	Group ids	false	string []
siteIds	Site ids	false	string []
tenant	Tenant	false	boolean

Create Exclusion

POST /web/api/v2.1/exclusions

Create Exclusions to make your Agents suppress alerts and mitigation for items that you consider to be benign or which you require for interoperability.

IMPORTANT! Every Exclusion is a possible security hole. Do not create Exclusions unless you are sure this hash, path, certificate signer, file type, or browser is always benign.

Of course, if you can make the Exclusion by its hash or path, that is much more secure than excluding all detections of a specific signer, file type, or browser. We do not recommend the last types for Exclusions on production endpoints. These Exclusions might be helpful in a lab or pentester group. When you create an Exclusion, make sure you set the filter to the smallest possible scope. For example, if you can exclude security for this item on a group, do not enter values for siteIds or accountIds.

We recommend that you read "Not Recommended Exclusions: <https://support.sentinelone.com/hc/en-us/articles/360007532894>

and Best Practices for Exclusions: <https://support.sentinelone.com/hc/en-us/articles/360008709014>

Get Blocklist

GET /web/api/v2.1/restrictions

Get a list of all the items in the Blocklist that match the filter.

To filter the results for a scope:

- * Global - Make sure "tenant" is "true" and no other scope ID is given.
- * Account - Make sure "tenant" is "false" and at least one Account ID is given.
- * Site - Make sure "tenant" is "false" and at least one Site ID is given.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdat__gt	optional	Created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example:

		"YWdlbnRfaWQ6NTgwMjkzODE=".
description__contains	optional	Free-text filter by description
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of IDs to filter by. Example: "225494730938493804,225494730938493915".
imported	optional	Filter by import status: true (imported), false (not imported), or both for multiselect
includechildren	optional	Return filters from children scope levels (Default: false)
includeparents	optional	Return filters from parent scope levels (Default: false)
limit	optional	Limit number of returned items (1-1000). Example: "10".
modes	optional	List of modes to filter by (Path exclusions only). Example: "suppress".
ostypes	optional	List of Os types to filter by. Example: "linux".
query	optional	A free-text search term, will match applicable attributes
recommendations	optional	List of recommendations to filter by. Example: "Not recommended".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
source	optional	List sources to filter by. Example: "user".
tenant	optional	Indicates a tenant scope request
type	optional	Type. Example: "black_hash".
types	optional	Type in. Example: "black_hash".
unified	optional	Unified
updatedat__between	optional	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
updatedat__gt	optional	Updated after this timestamp. Example:

		"2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Updated after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Updated before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Updated before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
user__contains	optional	Free-text filter by user name
userids	optional	List of user ids to filter by. Example: "225494730938493804,225494730938493915".
value	optional	Value
value__contains	optional	Free-text filter by value

tenant	Tenant	false	boolean

Create Blocklist Item

POST /web/api/v2.1/restrictions

Create a blocklist item for a SHA1 or SHA256 hash or both, for the scopes you enter in the filter fields. You can add the hash to multiple Groups, Sites, Accounts, and to the Global list.

IMPORTANT: The type must be "black_hash" - any other value will create an Exclusion rather than a Blocklist item.

Users with the IT role do not have permissions to run this.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

tenant	Indicates a tenant scope request	false	boolean

Delete Blocklist Item

DELETE /web/api/v2.1/restrictions

Agents immediately identify files on the blocklist and block them from executing. Agents identify files on the blocklist before they look at exclusions. If there is a conflict - for example, if a hash is blocklisted from the Cloud Intelligence, and you have an exclusion to run an application that requires this hash - you can delete the hash from the Blocklist. Users with the IT role do not have permissions to run this command.

Validate Exclusion Item

POST /web/api/v2.1/exclusions/validate

Check if an exclusion is on the list of SentinelOne items that are "Not Allowed" or "Not Recommended". This API returns one of the following statuses:

- * Not Recommended: This item is not recommended by SentinelOne because it decreases security. For example, If you accidentally exclude a path that is too broad, malware can enter your environment.
- * Not Allowed: This exclusion can harm the product and lead to unexpected functionality. From version North Pole SP3 you are prevented from creating Not Allowed exclusions.
- * None: This item is not on the list of SentinelOne items that are "Not Allowed" or "Not Recommended".

Export Exclusions

GET /web/api/v2.1/export/exclusions

Get a csv of all the items in the Exclusions that match the filter.

Note: To see items from the Global Exclusion scope, make sure "tenant" is "true" and no other scope ID is given.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
applicationname__contains	optional	Free-text filter by application name
childprocess	optional	Child process
conditions	optional	Conditions in. Example: "white_hash".
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".

createdat__gt	optional	Created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
description__contains	optional	Free-text filter by description
engines	optional	Engine in. Example: "suppress".
exclusionname__contains	optional	Exclusion name like any
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of IDs to filter by. Example: "225494730938493804,225494730938493915".
imported	optional	Filter by import status: true (imported), false (not imported), or both for multiselect
inappinventory	optional	Found or Not found - indicates if this exclusion is related to an application found in the scope's Application Inventory.
includechildren	optional	Return filters from children scope levels (Default: false)
includeparents	optional	Return filters from parent scope levels (Default: false)
interactionlevel	optional	Interaction level in. Example: "disable_all_monitors".
modes	optional	List of modes to filter by (Path exclusions only). Example: "suppress".
modetype	optional	Mode type. Example: "all".
notrecommended	optional	Not recommended in. Example: "Not recommended".
ostypes	optional	List of Os types to filter by. Example: "linux".
pathexclusiontypes	optional	List of excluded paths in an exclusion (Path exclusions only). Example: "file".
query	optional	A free-text search term, will match applicable attributes
recommendations	optional	List of recommendations to filter by. Example: "Not recommended".
scopepath__contains	optional	Scope path like any
siteids	optional	List of Site IDs to filter by. Example:

		"225494730938493804,225494730938493915".
source	optional	List sources to filter by. Example: "user".
tenant	optional	Indicates a tenant scope request
threattype	optional	Threat type in. Example: "EDR".
type	optional	Type. Example: "path".
types	optional	Type in. Example: "path".
unified	optional	Unified
updatedat__between	optional	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
updatedat__gt	optional	Updated after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Updated after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Updated before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Updated before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
user__contains	optional	Free-text filter by user name
userids	optional	List of user ids to filter by. Example: "225494730938493804,225494730938493915".
value	optional	Value
value__contains	optional	Free-text filter by value

Exclusions v2.1

Get Exclusions

GET /web/api/v2.1/unified-exclusions

Get a list of all the Exclusions that match the filter.

Note: To filter the results for a scope:

* Global - Make sure "tenant" is "true" and no other scope ID is given.

* Account - Make sure "tenant" is "false" and at least one Account ID is given.

* Site - Make sure "tenant" is "false" and at least one Site ID is given.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
applicationname__contains	optional	Free-text filter by application name.
childprocess	optional	Indicates if the exclusion applies to child processes or not. You can filter by this.
cmdlinevalue__contains	optional	Free-text filter by nested cmdline value.
conditions	optional	List of conditions to filter by. Example: "white_hash".
containername__contains	optional	Free-text filter by container name.
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	comma-separated list of fields to be shown. Example: "threatType,interactionLevel".
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdat__gt	optional	Created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
creator__contains	optional	Free-text filter by creator name.
cursor	optional	Cursor position returned by the last request. Use to iterate over

		more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
description__contains	optional	Free-text filter by description.
engines	optional	List of engines to filter by. Example: "suppress".
exclusionidentifier	optional	Filter by the stable exclusion identifier.
exclusionname__contains	optional	Free-text filter by exclusion name.
fullimagename__contains	optional	Free-text filter by full image URI.
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
hashtags	optional	Include only Exclusions that have any tags assigned if True, or none if False
hashtagsbygroup	optional	Include Exclusions that have any tags assigned if True, or none if False
hits30d__between	optional	Inclusive range for number of hits within the past 30 days. Example: "6-9".
hits90d__between	optional	Inclusive range for number of hits within the past 90 days. Example: "13-37".
hitsalltime__between	optional	Inclusive range for all-time number of hits. Example: "678-9998212".
ids	optional	List of IDs to filter by. Example: "225494730938493804,225494730938493915".
idsnin	optional	List of IDs to exclude from filter. Example: "225494730938493804,225494730938493915".
imported	optional	Indicates if the exclusion was imported by a bulk operation or not. You can filter by this.
inappinventory	optional	Indicates if the exclusion is related to an application found in the scope's Application Inventory or not. You can filter by this.
includechildren	optional	Return filters from children scope levels (Default: false).
includeparents	optional	Return filters from parent scope levels (Default: false).
interactionlevel	optional	List of interaction levels to filter by. Example: "disable_all_monitors".
labelskey__contains	optional	Free-text filter by label key.
labelsvalue__contains	optional	Free-text filter by label value.

lasthit__between	optional	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1775676749738-1775676848156".
lasthit__lt	optional	Last hit before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lasthit__lte	optional	Last hit before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
limit	optional	Limit number of returned items (1-1000). Example: "10".
menutype	optional	Page-scope (left-menu) exclusion grouping, e.g. 'endpoint' (which covers suppression + agent_interoperability). Combined with modeType (the in-table filter) by intersection. Sending modeType alone keeps the previous behaviour. Example: "all".
modetype	optional	List of Exclusion Type to filter by: suppression, agent_interoperability, or binary_vault . Example: "all".
namespace__contains	optional	Free-text filter by namespace.
notrecommended	optional	List of recommendations to filter by. Example: "Not recommended".
ostypes	optional	List of OS types to filter by. Example: "linux".
pathexclusiontypes	optional	List of excluded paths in an exclusion to filter by. Applies only to EDR exclusions of type path. Example: "file".
pathvalue__contains	optional	Free-text filter by nested path value.
podname__contains	optional	Free-text filter by pod name.
scopepath__contains	optional	Free-text filter by scope path.
sha256image__contains	optional	Free-text filter by SHA-256 of an image.
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
source	optional	List sources to filter by. Example: "user".
tagids	optional	List of tag IDs to filter by. Example:

		"225494730938493804,225494730938493915".
tags	optional	Filter exclusions by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key. Example: '{"key1": ["value1_1", "value1_2"], "key2__nin": ["value2"]}'.
tagsbygroup	optional	Group exclusions by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. . Example: '{"key1": ["value1_1", "value1_2"], "key2": ["value2"]}'.
tenant	optional	Indicates a tenant scope request
threattype	optional	List of threat types to filter by. Example: "EDR".
updatedat__between	optional	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
updatedat__gt	optional	Updated after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Updated after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Updated before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Updated before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
user__contains	optional	Free-text filter by username.
userids	optional	List of user IDs to filter by. Example: "225494730938493804,225494730938493915".
value__contains	optional	Free-text filter by value.
warnings	optional	List of warnings to filter by. Example: "Not allowed".

Create Unified Exclusion

POST /web/api/v2.1/unified-exclusions

Create Exclusions to make your Agents suppress alerts and mitigation for items that you consider to be benign or which you require for interoperability. **IMPORTANT!** Every Exclusion is a possible security hole. Do not create Exclusions unless you are sure this hash, path, certificate signer, file type, or browser is always benign. Of course, if you can make the Exclusion by its hash or path, that is much more secure than excluding all detections of a specific signer, file type, or browser. We do not recommend the last types for Exclusions on production endpoints. These Exclusions might be helpful in a lab or pentester group. When you create an Exclusion, make sure you set the filter to the smallest possible scope. For example, if you can exclude security for this item on a group, do not enter values for sitelds or accountlds. We recommend that you read "Not Recommended Exclusions and Best Practices for Exclusions. See the Help from the Console for more details.

Response Messages

data	Response data	false	see Update Exclusions - response - data table
errors	Errors	false	array

Update Exclusions - response - data

Create Bulk Unified Exclusion

POST /web/api/v2.1/unified-exclusions/bulk

Create Bulk Exclusions to make your Agents suppress alerts and mitigation for items that you consider to be benign or which you require for interoperability. **IMPORTANT!** Every Exclusion is a possible security hole. Do not create Exclusions unless you are sure this hash, path, certificate signer, file type, or browser is always benign.

Of course, if you can make the Exclusion by its hash or path, that is much more secure than excluding all detections of a specific signer, file type, or browser. We do not recommend the last types for Exclusions on production endpoints. These Exclusions might be helpful in a lab or pentester group. When you create an Exclusion, make sure you set the filter to the smallest possible scope. For example, if you can exclude security for this item on a group, do not enter values for sitelds or accountIds.

We recommend that you read "Not Recommended Exclusions and Best Practices for Exclusions."

See the Help from the Console for more details.

Create Bulk Unified Exclusion - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Create Bulk Unified Exclusion - response - data

Body Schema

Name	Description	Required	Value
data	Data	true	
filter	Filter	true	see Create Bulk Unified Exclusion - body - filter table

Create Bulk Unified Exclusion - body - filter

Name	Description	Required	Value
scopeLevel	The scope level of the exclusion.	true	enum
scopeLevelId	The identifier of the scope level.	false	integer

Import Unified Exclusions

POST /web/api/v2.1/unified-exclusions/import

Import exclusions to a specified scope in the Console. Use an exclusion JSON file exported from a different scope. Exported exclusion CSV files are also supported.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User is not allowed to perform this operation.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Import Unified Exclusions - response - data table
errors	Errors	false	array

Import Unified Exclusions - response - data

Name	Description	Required	Value
reportId	The ID of the Validation Report generated for the import. It can help you fix entries that did not import successfully.	false	string
succeeded	The number of entries that imported successfully	false	integer
total	The number of rows in the file	false	integer

Body Schema

Name	Description	Required	Value
formData		false	see Import Unified Exclusions - body - formData table

Import Unified Exclusions - body - formData

Name	Description	Required	Value
file	The input JSON or CSV file	true	file
filter	Filter	false	object

Export Unified Exclusions

GET /web/api/v2.1/unified-exclusions/export

Export the currently filtered exclusions to a JSON file. You can use the export file to import the exclusions to a different scope.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
applicationname__contains	optional	Free-text filter by application name.
childprocess	optional	Indicates if the exclusion applies to child processes or not. You can filter by this.
cmdlinevalue__contains	optional	Free-text filter by nested cmdline value.
conditions	optional	List of conditions to filter by. Example: "white_hash".
containername__contains	optional	Free-text filter by container name.
countsfor	optional	comma-separated list of fields to be shown. Example: "threatType,interactionLevel".
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdat__gt	optional	Created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".

createdat__lt	optional	Created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
creator__contains	optional	Free-text filter by creator name.
description__contains	optional	Free-text filter by description.
engines	optional	List of engines to filter by. Example: "suppress".
exclusionidentifier	optional	Filter by the stable exclusion identifier.
exclusionname__contains	optional	Free-text filter by exclusion name.
fullimagename__contains	optional	Free-text filter by full image URI.
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
hashtags	optional	Include only Exclusions that have any tags assigned if True, or none if False
hashtagsbygroup	optional	Include Exclusions that have any tags assigned if True, or none if False
hits30d__between	optional	Inclusive range for number of hits within the past 30 days. Example: "6-9".
hits90d__between	optional	Inclusive range for number of hits within the past 90 days. Example: "13-37".
hitsalltime__between	optional	Inclusive range for all-time number of hits. Example: "678-9998212".
ids	optional	List of IDs to filter by. Example: "225494730938493804,225494730938493915".
idsnin	optional	List of IDs to exclude from filter. Example: "225494730938493804,225494730938493915".
imported	optional	Indicates if the exclusion was imported by a bulk operation or not. You can filter by this.
inappinventory	optional	Indicates if the exclusion is related to an application found in the scope's Application Inventory or not. You can filter by this.
includechildren	optional	Return filters from children scope levels (Default: false).
includeparents	optional	Return filters from parent scope levels (Default: false).
interactionlevel	optional	List of interaction levels to filter by. Example: "disable_all_monitors".

labelskey__contains	optional	Free-text filter by label key.
labelsvalue__contains	optional	Free-text filter by label value.
lasthit__between	optional	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1775676749738-1775676848156".
lasthit__lt	optional	Last hit before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lasthit__lte	optional	Last hit before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
menutype	optional	Page-scope (left-menu) exclusion grouping, e.g. 'endpoint' (which covers suppression + agent_interoperability). Combined with modeType (the in-table filter) by intersection. Sending modeType alone keeps the previous behaviour. Example: "all".
modetype	optional	List of Exclusion Type to filter by: suppression, agent_interoperability, or binary_vault . Example: "all".
namespace__contains	optional	Free-text filter by namespace.
notrecommended	optional	List of recommendations to filter by. Example: "Not recommended".
ostypes	optional	List of OS types to filter by. Example: "linux".
pathexclusiontypes	optional	List of excluded paths in an exclusion to filter by. Applies only to EDR exclusions of type path. Example: "file".
pathvalue__contains	optional	Free-text filter by nested path value.
podname__contains	optional	Free-text filter by pod name.
scopepath__contains	optional	Free-text filter by scope path.
sha256image__contains	optional	Free-text filter by SHA-256 of an image.
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
source	optional	List sources to filter by. Example: "user".
tagids	optional	List of tag IDs to filter by. Example: "225494730938493804,225494730938493915".
tags	optional	Filter exclusions by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key. Example: "{"key1": ["value1_1",

		"value1_2"], "key2__nin": ["value2"]}]".
tagsbygroup	optional	Group exclusions by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. . Example: {"key1": ["value1_1", "value1_2"], "key2": ["value2"]}]".
tenant	optional	Indicates a tenant scope request
threatype	optional	List of threat types to filter by. Example: "EDR".
updatedat__between	optional	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
updatedat__gt	optional	Updated after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Updated after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Updated before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Updated before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
user__contains	optional	Free-text filter by username.
userids	optional	List of user IDs to filter by. Example: "225494730938493804,225494730938493915".
value__contains	optional	Free-text filter by value.
warnings	optional	List of warnings to filter by. Example: "Not allowed".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Get Exclusion Actions

GET /web/api/v2.1/unified-exclusions/available-actions

Get a list of available actions for exclusions that match the filter criteria.

Parameters

create	required	Create
accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
applicationname__contains	optional	Free-text filter by application name.
childprocess	optional	Indicates if the exclusion applies to child processes or not. You can filter by this.
cmdlinevalue__contains	optional	Free-text filter by nested cmdline value.
conditions	optional	List of conditions to filter by. Example: "white_hash".
containername__contains	optional	Free-text filter by container name.
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	comma-separated list of fields to be shown. Example: "threatType,interactionLevel".
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdat__gt	optional	Created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
creator__contains	optional	Free-text filter by creator name.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example:

		"YWdlbnRfaWQ6NTgwMjkzODE=".
description__contains	optional	Free-text filter by description.
engines	optional	List of engines to filter by. Example: "suppress".
exclusionidentifier	optional	Filter by the stable exclusion identifier.
exclusionname__contains	optional	Free-text filter by exclusion name.
fullimagename__contains	optional	Free-text filter by full image URI.
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
hashtags	optional	Include only Exclusions that have any tags assigned if True, or none if False
hashtagsbygroup	optional	Include Exclusions that have any tags assigned if True, or none if False
hits30d__between	optional	Inclusive range for number of hits within the past 30 days. Example: "6-9".
hits90d__between	optional	Inclusive range for number of hits within the past 90 days. Example: "13-37".
hitsalltime__between	optional	Inclusive range for all-time number of hits. Example: "678-9998212".
ids	optional	List of IDs to filter by. Example: "225494730938493804,225494730938493915".
idsnin	optional	List of IDs to exclude from filter. Example: "225494730938493804,225494730938493915".
imported	optional	Indicates if the exclusion was imported by a bulk operation or not. You can filter by this.
inappinventory	optional	Indicates if the exclusion is related to an application found in the scope's Application Inventory or not. You can filter by this.
includechildren	optional	Return filters from children scope levels (Default: false).
includeparents	optional	Return filters from parent scope levels (Default: false).
interactionlevel	optional	List of interaction levels to filter by. Example: "disable_all_monitors".
labelskey__contains	optional	Free-text filter by label key.
labelsvalue__contains	optional	Free-text filter by label value.
lasthit__between	optional	Date range for update time (format: <from_timestamp>-

		<to_timestamp>, inclusive). Example: "1775676749738-1775676848156".
lasthit__lt	optional	Last hit before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lasthit__lte	optional	Last hit before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
limit	optional	Limit number of returned items (1-1000). Example: "10".
menutype	optional	Page-scope (left-menu) exclusion grouping, e.g. 'endpoint' (which covers suppression + agent_interoperability). Combined with modeType (the in-table filter) by intersection. Sending modeType alone keeps the previous behaviour. Example: "all".
modetype	optional	List of Exclusion Type to filter by: suppression, agent_interoperability, or binary_vault . Example: "all".
namespace__contains	optional	Free-text filter by namespace.
notrecommended	optional	List of recommendations to filter by. Example: "Not recommended".
ostypes	optional	List of OS types to filter by. Example: "linux".
pathexclusiontypes	optional	List of excluded paths in an exclusion to filter by. Applies only to EDR exclusions of type path. Example: "file".
pathvalue__contains	optional	Free-text filter by nested path value.
podname__contains	optional	Free-text filter by pod name.
scopepath__contains	optional	Free-text filter by scope path.
selectall	optional	When true, calculate actions for all exclusions matching filters (not just selected IDs).
sha256image__contains	optional	Free-text filter by SHA-256 of an image.
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

source	optional	List sources to filter by. Example: "user".
tagids	optional	List of tag IDs to filter by. Example: "225494730938493804,225494730938493915".
tags	optional	Filter exclusions by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key. Example: '{"key1": ["value1_1", "value1_2"], "key2__nin": ["value2"]}'.
tagsbygroup	optional	Group exclusions by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. . Example: '{"key1": ["value1_1", "value1_2"], "key2": ["value2"]}'.
tenant	optional	Indicates a tenant scope request
threattype	optional	List of threat types to filter by. Example: "EDR".
updatedat__between	optional	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
updatedat__gt	optional	Updated after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Updated after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Updated before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Updated before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
user__contains	optional	Free-text filter by username.
userids	optional	List of user IDs to filter by. Example: "225494730938493804,225494730938493915".
value__contains	optional	Free-text filter by value.
warnings	optional	List of warnings to filter by. Example: "Not allowed".

Filters

Get Filters

GET /web/api/v2.1/filters

Get the list of saved filters. See Save Filter. The response includes the ID of the filter, which you can use in other commands.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
ids	optional	A list of Filter IDs. Example: "225494730938493804,225494730938493915".
includechildren	optional	Return filters from children scope levels (Default: false)
includeglobal	optional	[DEPRECATED] Return global filters even when specific sites are selected
includeparents	optional	Return filters from parent scope levels (Default: false)
limit	optional	Limit number of returned items (1-1000). Example: "10".
query	optional	Text query for filter's name. Example: "MyFilter".

siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

adComputerMember__contains	Free-text filter by Active Directory computer groups string (supports multiple values)	false	string []
adComputerName__contains	Free-text filter by Active Directory computer name string (supports	false	string []

	multiple values)		
adComputerQuery__contains	Free-text filter by Active Directory computer name or its groups (supports multiple values)	false	string []
adQuery	An Active Directory query string	false	string
adQuery__contains	Free-text filter by Active Directory string (supports multiple values)	false	string []
adUserMember__contains	Free-text filter by Active Directory user groups string (supports multiple values)	false	string []
adUserName__contains	Free-text filter by Active Directory username string (supports multiple values)	false	string []
adUserQuery__contains	Free-text filter by Active Directory computer name or its groups (supports multiple values)	false	string []
agentNamespace__contains	Free-text filter by agent namespace (supports multiple values)	false	string []
agentOperatingMode__contains	Free-text filter by Agent Operating Mode (supports multiple values)	false	string []
agentOperatingModes	Agent operating mode in	false	string []
agentOperatingModesNin	Agent operating mode nin	false	string []
agentPodName__contains	Free-text filter by agent pod name (supports multiple values)	false	string []
agentVersions	Agent versions to include	false	string []
agentVersionsNin	Agent versions not to include	false	string []
appsVulnerabilityStatuses	Apps vulnerability status in	false	string []
appsVulnerabilityStatusesNin	Apps vulnerability status nin	false	string []
awsRole__contains	Free-text filter by aws role(supports multiple values)	false	string []
awsSecurityGroups__contains	Free-text filter by aws securityGroups(supports multiple values)	false	string []
awsSubnetIds__contains	Free-text filter by aws subnet ids (supports multiple values)	false	string []
azureResourceGroup__contains	Free-text filter by azure resource group(supports multiple values)	false	string []

cloudAccount__contains	Free-text filter by cloud account (supports multiple values)	false	string []
cloudImage__contains	Free-text filter by cloud image (supports multiple values)	false	string []
cloudInstanceid__contains	Free-text filter by cloud instance id(supports multiple values)	false	string []
cloudInstanceSize__contains	Free-text filter by cloud instance size(supports multiple values)	false	string []
cloudLocation__contains	Free-text filter by cloud location (supports multiple values)	false	string []
cloudNetwork__contains	Free-text filter by cloud network (supports multiple values)	false	string []
cloudProvider	Agents from which cloud provider	false	string []
cloudProviderNin	Exclude Agents from these cloud provider	false	string []
cloudTags__contains	Free-text filter by cloud tags (supports multiple values)	false	string []
clusterName__contains	Free-text filter by cluster name (supports multiple values)	false	string []
computerName__contains	Free-text filter by computer name (supports multiple values)	false	string []
computerNameOrUuid__contains	Free-text filter by computer name or uuid (supports multiple values)	false	string []
consoleMigrationStatuses	Migration status in	false	string []
consoleMigrationStatusesNin	Migration status nin	false	string []
containerizedWorkloadCounts	Containerized workload counts	false	see Get Filters - response - containerizedWorkloadCounts table
coreCount__between	Possible number of CPU cores (inclusive)	false	string
cpuCount__between	Possible number of CPU cores (inclusive)	false	string
cpuld__contains	Free-text filter by CPU name (supports multiple values)	false	string []
domains	Included network domains	false	string []
domainsNin	Not included network domains	false	string []
ecsClusterName__contains	Free-text filter by ECS cluster name	false	string []
ecsServiceArn__contains	Free-text filter by ECS service arn	false	string []

ecsServiceName__contains	Free-text filter by ECS service name	false	string []
ecsTaskArn__contains	Free-text filter by ECS task arn	false	string []
ecsTaskAvailabilityZone__contains	Free-text filter by ECS task availability zone	false	string []
ecsTaskDefinitionArn__contains	Free-text filter by ECS task definition arn	false	string []
ecsTaskDefinitionFamily__contains	Free-text filter by ECS task definition family	false	string []
ecsTaskDefinitionRevision__contains	Free-text filter by ECS task definition revision	false	string []
ecsType__contains	Free-text filter by ECS type	false	string []
ecsVersion__contains	Free-text filter by ECS version	false	string []
encryptedApplications	Disk encryption status	false	boolean []
entraId__contains	Free-text filter by Entra ID (supports multiple values)	false	string []
externalId__contains	Free-text filter by external ID (Customer ID)	false	string []
externalIp__contains	Free-text filter by visible IP (supports multiple values)	false	string []
filteredGroupIds	List of Group IDs to filter by	false	string []
filteredSiteIds	List of Site IDs to filter by	false	string []
firewallEnabled	The agents supports Firewall Control and it is enabled for the agent's group	false	boolean []
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean []
hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []

isActive	Include only active Agents	false	boolean []
isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []
isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA enabled if True, or not if False	false	boolean []
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []
isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []

locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []
osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []

query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
totalMemory__between	Total memory range (GB, inclusive)	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid__contains	Free-text filter by Agent UUID	false	string []

	(supports multiple values)		
--	----------------------------	--	--

Get Filters - response - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Save Filter

POST /web/api/v2.1/filters

Save a new filter to get a list of matching endpoints. When you save a filter, you can run actions on the Agents as a set of objects or create a dynamic group (automatically adds new Agents that match the filter and drops Agents if they change to not match).

For example, you can save a filter with `{"data":{"filterFields":{"infected":true}}}` to run kill and quarantine commands on all the Agents at once, or to create a group that holds currently infected endpoints. Best Practice: Set a scope for the new Saved Filter. Run "accounts", "sites", or "groups" to get the IDs for the scope.

BEST PRACTICE

Set a scope for the new Saved Filter. Run "accounts", "sites", or "groups" to get the IDs for the scope.

Response Messages

200 - Filter successfully saved. Returns created object.

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User is not allowed to perform this operation.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Save Filter - response - data table
errors	Errors	false	array

Save Filter - response - data

Name	Description	Required	Value
createdAt	Created at	true	string
id	Id	true	string
name	Name	true	string
scopeLevel	Filter scope	true	enum
updatedAt	Updated at	true	string
filterFields	A set of arguments composing the filter	false	see Save Filter - response - filterFields table
scopeld	Associated site/account	false	string
siteld	[DEPRECATED] Use scopeld instead	false	string

Save Filter - response - filterFields

Name	Description	Required	Value
activeProtection	Included agent active protections	false	string []
adComputerMember__contains	Free-text filter by Active Directory computer groups string (supports multiple values)	false	string []

locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network	false	boolean []

	Quarantine Control and its enabled for the agent's group		
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []
osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string

remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
totalMemory__between	Total memory range (GB, inclusive)	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []

Save Filter - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer

success	Indicates a successful operation	false	boolean

[DEPRECATED] Get Deep Visibility Filters

GET /web/api/v2.1/filters/dv

Get saved Deep Visibility queries with full data. See Save Deep Visibility Filters.The response includes the ID of the filter, which you can use in other commands.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	A list of Filter IDs. Example: "225494730938493804,225494730938493915".
includechildren	optional	Return filters from children scope levels (Default: false)
includeglobal	optional	[DEPRECATED] Return global filters even when specific sites are selected
includeparents	optional	Return filters from parent scope levels (Default: false)
limit	optional	Limit number of returned items (1-1000). Example: "10".
query	optional	Text query for filter's name. Example: "MyFilter".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".

skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

Response Messages

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

[DEPRECATED] Save Deep Visibility Filter

POST /web/api/v2.1/filters/dv

Save a Deep Visibility query with data as a filter, to get notifications of specific events sent to named recipients on a given frequency. The recipients must be Console users with permissions on the scope of the query. Notifications are sent through email: you must have an SMTP server configured in the SentinelOne solution (/settings/smtp see Set SMTP Settings).

Deep Visibility requires a Complete SKU.

Response Messages

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

file	File	true	file

Get Filters

GET /web/api/v2.1/xdr/filters

Get the list of saved filters. See Save Filter. The response includes the ID of the filter, which you can use in other commands.

Parameters

accountids	optional	List of Account IDs to filter by
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
ids	optional	A list of Filter IDs
includechildren	optional	Return filters from children scope levels (Default: false)
includeparents	optional	Return filters from parent scope levels (Default: false)
limit	optional	Limit number of returned items (1-1000)
query	optional	Text query for filter's name
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.

sortorder	optional	Sort direction
-----------	----------	----------------

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	undefined []
errors	Errors	false	array
pagination		false	see Get Filters - response - pagination table

Get Filters - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Save Filter

POST /web/api/v2.1/xdr/filters

Save a new filter to get a list of matching endpoints. When you save a filter, you can run actions on the Agents as a set of objects or create a dynamic group (automatically adds new Agents that match the filter and drops Agents if they change to not match).

For example, you can save a filter with {"data":{"filterFields":{"infected":true}}} to run kill and quarantine commands on all the Agents at once, or to create a group that holds currently infected endpoints. Best Practice: Set a scope for the new Saved Filter. Run "accounts", "sites", or "groups" to get the IDs for the scope.

BEST PRACTICE

Set a scope for the new Saved Filter. Run "accounts", "sites", or "groups" to get the IDs for the scope.

Response Messages

200 - Filter successfully saved. Returns created object.

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User is not allowed to perform this operation.

Response Schema

Name	Description	Required	Value
data		false	see Save Filter - response - data table

filter	Filter scope	false	object

Save Filter - body - data

Name	Description	Required	Value
name	New filter name	true	string
filter	Filter scope	false	object
filterFields	A set of parameters to filter by	false	object
scopeId	Scope id	false	integer
scopeLevel	Filter scope	false	string
visibility	Visibility of the filter. Controls whether the filter should be accessible only by the author, or by anyone with the same scope ID/level.	false	enum

Filters with Metadata

GET /web/api/v2.1/xdr/private/filters/enriched

Get a list of saved endpoint filters, with enriched data. One of the fields in the response is the ID of each filter, which you will need in other commands.

Parameters

accountids	optional	List of Account IDs to filter by
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
ids	optional	A list of Filter IDs
includechildren	optional	Return filters from children scope levels (Default: false)
includeparents	optional	Return filters from parent scope levels (Default: false)
limit	optional	Limit number of returned items (1-1000)
query	optional	Text query for filter's name
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".

skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

errors	Errors	false	array

Delete Filter - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Firewall Control

Get Firewall Rules

GET /web/api/v2.1/firewall-control

Get the Firewall Control rules for a scope specified by ID (run "accounts", "sites", "groups", or set "tenant" to "true") that match the filter. The response will be quite long because it includes all the rule properties, thus at least one of these filters is required: action, status, osType, name, or scope ID.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
actions	optional	Return firewall rules with the filtered action. Example: "Allow".
application__contains	optional	Free-text filter by application (supports multiple values)
applications	optional	Return firewall rules with the filtered firewall class.
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__between	optional	Return firewall rules created within this range (inclusive). Example: "1514978764288-1514978999999".
createdat__gt	optional	Return firewall rules created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Return firewall rules created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Return firewall rules created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Return firewall rules created before or at this timestamp. Example:

		"2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
directions	optional	Return firewall rules with the filtered directions. Example: "any".
disablepagination	optional	If true, all rules for requested scope will be returned
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of ids to filter by. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".
locationids	optional	Filter by associated locations. Example: "225494730938493804,225494730938493915".
name	optional	Return firewall rules with the filtered name.
name__contains	optional	Free-text filter by the Rule name (supports multiple values)
ostypes	optional	Return firewall rules with the filtered os_type. Example: "linux".
protocol__contains	optional	Free-text filter by protocol (supports multiple values)
protocols	optional	Return firewall rules with the filtered protocols.
query	optional	Free text search on name, tag, application, protocol
scopes	optional	Return only firewall rules in this scope. Example: "account".
service__contains	optional	Free-text filter by service (supports multiple values)
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
statuses	optional	Return firewall rules with the filtered status. Example: "Enabled".
tagids	optional	Filter by associated tags. Example: "225494730938493804,225494730938493915".

tagname__contains	optional	Free-text filter by the Tag name (supports multiple values)
tenant	optional	Indicates a tenant scope request

Create Firewall Rule

POST /web/api/v2.1/firewall-control

Create a Firewall Control rule for a scope specified by ID (run "accounts", "sites", "groups", or set "tenant" to "true") and specific OS, to allow or block network traffic to matching endpoints.

You can create one clean-up rule, with the Action of Allow or Block and with no other parameters defined explicitly. Make this the default rule at the end of your rule list. Traffic that does not match other rules first will match this rule. If you do not have a clean-up rule to match all traffic, the default Firewall Control behavior is to allow traffic that is not explicitly blocked.

Firewall Control requires Control SKU.

tenant	Indicates a tenant scope request	false	boolean

Copy Rules

POST /web/api/v2.1/firewall-control/copy-rules

Copy a set of rules to other scopes.

In the filter of the body, enter the properties to define the source. In the data field of the body, define the targets by ID. To get a scope ID, run 'accounts', 'sites', or 'groups'.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Move Rules

POST /web/api/v2.1/firewall-control/move-rules

Remove Firewall Rules, defined with the ID of the rules (run 'firewall-control'), from scopes specified by ID (run 'accounts', 'sites', or 'groups') and add the rules to the scope IDs in the data field.

Firewall Control requires Control SKU.

Response Messages

tenant	Indicates a tenant scope request	false	boolean

Reorder Rules

PUT /web/api/v2.1/firewall-control/reorder

Change the order of rules for a scope specified by ID (run "accounts", "sites", or "groups").

The Agent looks at the rules based on their order in the Firewall Control policy, from the top to the bottom. First it goes through the Group rules, then the Site rules, then the Account rules, then the Global rules. When the Agent finds a rule that matches the parameters of the traffic, that rule is applied. The Agent does not continue to the lower rules in the list. Thus, the scope and the order of the rules is important.

Firewall Control requires Control SKU.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value

tenant	Indicates a tenant scope request	false	boolean

Reorder Rules - body - data

Name	Description	Required	Value
id	Rule ID	true	string
order	Desired position in the list of rules	true	integer

Get Configuration

GET /web/api/v2.1/firewall-control/configuration

Get the Firewall Control configuration for a given scope.

To filter the results for a scope:

* Global - Make sure "tenant" is "true" and no other scope ID is given.

* Account - Make sure "tenant" is "false" and at least one Account ID is given.

* Site - Make sure "tenant" is "false" and at least one Site ID is given.

The response shows if Firewall Control is enabled for the scope, if Location Awareness is enabled, the higher scope from which this scope inherited the configuration, and whether a lower scope inherits this configuration.

Firewall Control requires Control SKU.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
------------	----------	---

groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
tenant	optional	Indicates a tenant scope request

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get Configuration - response - data table
errors	Errors	false	array

Get Configuration - response - data

Name	Description	Required	Value
enabled	Firewall control enabled for the scope	false	boolean
inheritAllFirewallRules	Inherit all the rules and tags from the parent scope. Expands on 'inherits' value.	false	boolean
inheritedFrom	If null it means it is own policy else it tells the ancestor for the policy. For groups options are null/Site/Global, for site options are null/Global.	false	string
inherits	True if rules are decoupled from parent rules	false	boolean
inheritSettings	Inherit firewall settings from parent scope	false	boolean
locationAware	Firewall control supports location awareness for the scope	false	boolean
reportBlocked	Agent should report blocked events	false	boolean
selectedTags	Selected tags	false	string []

Update Configuration

PUT /web/api/v2.1/firewall-control/configuration

Change the Firewall Control configuration for a given scope.

To get the ID of a scope, run "accounts", "sites", or "groups". To change the Global configuration, leave the filters empty and set "tenant" to "true". In the Body, you can set if Firewall Control is enabled for the scope, if Location Awareness is enabled, the higher scope from which this scope inherits the configuration ("Global" or a scope ID), whether the lower scopes inherit this configuration, and whether blocked actions are reported.

Firewall Control requires Control SKU.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Export Rules

GET /web/api/v2.1/firewall-control/export

Export Firewall Control rules that match the filter to a JSON file from a scope specified by ID (run "accounts", "sites", "groups", or leave the scope empty and set "tenant" to "true") and import them to another scope (with the "import" command).
Firewall Control requires Control SKU.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
actions	optional	Return firewall rules with the filtered action. Example: "Allow".
application__contains	optional	Free-text filter by application (supports multiple values)
applications	optional	Return firewall rules with the filtered firewall class.
createdat__between	optional	Return firewall rules created within this range (inclusive). Example: "1514978764288-1514978999999".
createdat__gt	optional	Return firewall rules created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Return firewall rules created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Return firewall rules created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Return firewall rules created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
directions	optional	Return firewall rules with the filtered directions. Example: "any".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of ids to filter by. Example: "225494730938493804,225494730938493915".
locationids	optional	Filter by associated locations. Example: "225494730938493804,225494730938493915".
name	optional	Return firewall rules with the filtered name.
name__contains	optional	Free-text filter by the Rule name (supports multiple values)
ostypes	optional	Return firewall rules with the filtered os_type. Example: "linux".
protocol__contains	optional	Free-text filter by protocol (supports multiple values)
protocols	optional	Return firewall rules with the filtered protocols.
query	optional	Free text search on name, tag, application, protocol
scopes	optional	Return only firewall rules in this scope. Example: "account".
service__contains	optional	Free-text filter by service (supports multiple values)
siteids	optional	List of Site IDs to filter by. Example:

		"225494730938493804,225494730938493915".
statuses	optional	Return firewall rules with the filtered status. Example: "Enabled".
tagids	optional	Filter by associated tags. Example: "225494730938493804,225494730938493915".
tagname__contains	optional	Free-text filter by the Tag name (supports multiple values)
tenant	optional	Indicates a tenant scope request

Get Protocols

GET /web/api/v2.1/firewall-control/protocols

Get a list of protocols that can be used in Firewall Control rules.

Parameters

countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
disablepagination	optional	If true, all rules for requested scope will be returned
limit	optional	Limit number of returned items (1-1000). Example: "10".
query	optional	Full text search on protocols
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000

		items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Protocols - response - pagination table
data	Response data	false	see Get Protocols - response - data table
errors	Errors	false	array

Get Protocols - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Protocols - response - data

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
groupIds	List of Group IDs to filter by	false	string []
name	Description of the protocol	false	string
siteIds	List of Site IDs to filter by	false	string []
tenant	Indicates a tenant scope request	false	boolean
value	Short code identifying the protocol	false	string

Add Rule Tags

POST /web/api/v2.1/firewall-control/add-tags

Create a Firewall Rule tag.

Create tags to represent Firewall policies - a set of rules in a specific order. After you create the tag, add rules to it.

Notes:

* Tags apply to a scope and cannot be linked to rules from different scopes.

* Tags must be 2 to 256 characters.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

tenant	Indicates a tenant scope request	false	boolean

Remove Rule Tags

POST /web/api/v2.1/firewall-control/remove-tags

Remove firewall tags from rules matching the filter.

Tags represent Firewall policies - a set of rules in a specific order. When you remove a rule with a tag, all scopes that subscribe to the tag get the change.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

Remove Rule Tags - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
actions	Return firewall rules with the filtered action.	false	string []
application__contains	Free-text filter by application (supports multiple values)	false	string []
applications	Return firewall rules with the filtered firewall class.	false	string []
createdAt__between	Return firewall rules created within this range (inclusive)	false	string
createdAt__gt	Return firewall rules created after this timestamp.	false	string
createdAt__gte	Return firewall rules created after or at this timestamp.	false	string
createdAt__lt	Return firewall rules created before this timestamp.	false	string
createdAt__lte	Return firewall rules created before or at this timestamp.	false	string
directions	Return firewall rules with the filtered directions.	false	string []
groupIds	List of Group IDs to filter by	false	string []
ids	List of ids to filter by	false	string []
locationIds	Filter by associated locations	false	string []
name	Return firewall rules with the filtered name.	false	string
name__contains	Free-text filter by the Rule name	false	string []

	(supports multiple values)		
osTypes	Return firewall rules with the filtered os_type.	false	string []
protocol__contains	Free-text filter by protocol (supports multiple values)	false	string []
protocols	Return firewall rules with the filtered protocols.	false	string []
query	Free text search on name, tag, application, protocol	false	string
scopes	Return only firewall rules in this scope	false	string []
service__contains	Free-text filter by service (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
statuses	Return firewall rules with the filtered status.	false	string []
tagIds	Filter by associated tags	false	string []
tagName__contains	Free-text filter by the Tag name (supports multiple values)	false	string []
tenant	Indicates a tenant scope request	false	boolean

Get Tag Firewall Rules

GET /web/api/v2.1/firewall-control/tag-rules/{tag_id}

Get all Firewall rules linked to tag, regardless of inheritance mode.

To get the ID of a tag, run the firewall-control API (see Get Firewall Rules) and see tagIDs in the response.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
actions	optional	Return firewall rules with the filtered action. Example: "Allow".
application__contains	optional	Free-text filter by application (supports multiple values)
applications	optional	Return firewall rules with the filtered firewall class.
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__between	optional	Return firewall rules created within this range (inclusive). Example:

		"1514978764288-15149789999999".
createdat__gt	optional	Return firewall rules created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Return firewall rules created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Return firewall rules created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Return firewall rules created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
directions	optional	Return firewall rules with the filtered directions. Example: "any".
disablepagination	optional	If true, all rules for requested scope will be returned
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of ids to filter by. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".
locationids	optional	Filter by associated locations. Example: "225494730938493804,225494730938493915".
name	optional	Return firewall rules with the filtered name.
name__contains	optional	Free-text filter by the Rule name (supports multiple values)
ostypes	optional	Return firewall rules with the filtered os_type. Example: "linux".
protocol__contains	optional	Free-text filter by protocol (supports multiple values)
protocols	optional	Return firewall rules with the filtered protocols.
query	optional	Free text search on name, tag, application, protocol
scopes	optional	Return only firewall rules in this scope. Example: "account".
service__contains	optional	Free-text filter by service (supports multiple values)
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".

skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
statuses	optional	Return firewall rules with the filtered status. Example: "Enabled".
tagids	optional	Filter by associated tags. Example: "225494730938493804,225494730938493915".
tagname__contains	optional	Free-text filter by the Tag name (supports multiple values)
tenant	optional	Indicates a tenant scope request

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Tag Firewall Rules - response - pagination table
data	Response data	false	see Get Tag Firewall Rules - response - data table
errors	Errors	false	array

Get Tag Firewall Rules - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Tag Firewall Rules - response - data

Name	Description	Required	Value
action	Defines if agent shall Block or Allow use of firewalls which matches the rule parameters.	false	enum
application	Application for the rule	false	
createdAt	Date of rule creation	false	string
creator	Full name of the creating user	false	string
creatorId	Id of the creating user	false	string
description	Description	false	string
direction	Defines the Direction of the Firewall rule.	false	enum
editable	True if the rule can be modified at this scope level	false	boolean
id	Rule ID	false	string
localHost	Local host	false	
localPort	Local ports	false	
location	Location associated with the rule	false	see Get Tag Firewall Rules - response - location table
name	The name of the firewall rule.	false	string
order	Position in the list of rules	false	integer
osType	[DEPRECATED] Please use os_types since multiple os types are	false	enum

	supported.This field will return the first os_type, not necessarily the only one.		
osTypes	Os types	false	string []
productId	Product identifier. Unique for a specific product module, per vendor ID, Interface.	false	string
protocol	The protocol.	false	string
remoteHost	[DEPRECATED] First remote host in the rule. Full list in remote_hosts	false	
remoteHosts	List of remote hosts	false	see Get Tag Firewall Rules - response - remoteHosts table
remotePort	Remote ports	false	
ruleCategory	Network quarantine rule or standard firewall rule	false	enum
scope	Scope of the rule	false	enum
scopeId	The group or site id depending on the scope. null if it is global.	false	string
status	Defines if rule is Enabled or Disabled	false	enum
tag	[DEPRECATED] Free text to describe the rule. Please use description instead.	false	string
tagIds	Tag ids	false	string []
tagNames	Tag names	false	string []
tags	Tags	false	see Get Tag Firewall Rules - response - tags table
updatedAt	Date of last update	false	string

Get Tag Firewall Rules - response - location

Name	Description	Required	Value
type	Location type	true	enum
values	Location IDs (applicable for the "specific" location type only)	false	see Get Tag Firewall Rules - response - values table

Get Tag Firewall Rules - response - values

Name	Description	Required	Value
id	Location ID	true	string
name	Location name	false	string
scope	Location scope	false	enum

Get Tag Firewall Rules - response - remoteHosts

Name	Description	Required	Value
type	Type of the host	false	enum
values	Value of the host	false	string []

Get Tag Firewall Rules - response - tags

Name	Description	Required	Value
id		false	string
name		false	string

Update Firewall Rule

PUT /web/api/v2.1/firewall-control/{firewall_rule_category}

Change a Firewall Control rule.

This command requires the rule ID, which you can get from "firewall-control" (see Get Firewall Rules) or "firewall-control/unscooped" (see Get Unscoped Rules).

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

Gateways

Get Gateways

GET /web/api/v2.1/ranger/gateways

Get the gateways in your deployment that match the filter from a Network Discovery scan. Network Discovery requires a Network Discovery license.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
agentpercentage__between	optional	Percentage of agents of the account in this network calculated as $\text{numberOfAgents}/\text{totalAgents} * 100$. Example: "70-80".
agentpercentage__gt	optional	Agent percentage (more than)
agentpercentage__gte	optional	Agent percentage (more than or equal)
agentpercentage__lt	optional	Agent percentage (less than)
agentpercentage__lte	optional	Agent percentage (less than or equal)
allowscan	optional	Do we allow scanning in this network
archived	optional	Archived network
connectedrangers__between	optional	The total of non decommissioned agents in the account. Example: "2-8".
connectedrangers__gt	optional	Total agents (more than)
connectedrangers__gte	optional	Total agents (more than or equal)
connectedrangers__lt	optional	Total agents (less than)
connectedrangers__lte	optional	Total agents (less than or equal)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".

createdat__gt	optional	Gateway created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Gateway created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Gateway created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Gateway created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
externalip	optional	Search external ip using a CIDR expression or exact IP
externalip__contains	optional	Free-text filter by visible IP (supports multiple values). Example: "192.168.0.1/24,10.1".
icmpscan	optional	ICMP scan enabled
ids	optional	List of gateway ids. Example: "225494730938493804,225494730938493915".
ip	optional	Search ip using a CIDR expression exact IP
ip__contains	optional	Free-text filter by IP Address (supports multiple values). Example: "192.168.0.1/24,10.1".
limit	optional	Limit number of returned items (1-1000). Example: "10".
macaddress	optional	The gateway mac address
macaddress__contains	optional	Free-text filter by mac address (supports multiple values). Example: "aa:ee:b1".
manufacturer	optional	The gateway manufacturer obtained from the mac address
manufacturer__contains	optional	Free-text filter by manufacturer (supports multiple values). Example: "Company".
mdnsscan	optional	MDNS scan enabled
networkname__contains	optional	Free-text filter by network name (supports multiple values). Example: "Network1".
new	optional	True if this is network was first seen some days ago, 3 by default
numberofagents__between	optional	The number of non decommissioned agents in this network. Example: "2-8".
numberofagents__gt	optional	Agent count (more than)

numberofagents__gte	optional	Agent count (more than or equal)
numberofagents__lt	optional	Agent count (less than)
numberofagents__lte	optional	Agent count (less than or equal)
numberofrangers__between	optional	The number of non decommissioned agents in this network. Example: "2-8".
numberofrangers__gt	optional	Network Discovery count (more than)
numberofrangers__gte	optional	Network Discovery count (more than or equal)
numberofrangers__lt	optional	Network Discovery count (less than)
numberofrangers__lte	optional	Network Discovery count (less than or equal)
query	optional	Free text query
rdnsscan	optional	RDNS scan enabled
scanonlylocalsubnets	optional	Allow remote tasks form this network
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
smbscan	optional	SMB scan enabled
snmpscan	optional	SNMP scan enabled
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
tcpports__contains	optional	Free-text filter by tcp port (supports multiple values). Example: "80,24".
totalagents__between	optional	The total of non decommissioned agents in the account. Example: "2-8".
totalagents__gt	optional	Total agents (more than)
totalagents__gte	optional	Total agents (more than or equal)
totalagents__lt	optional	Total agents (less than)
totalagents__lte	optional	Total agents (less than or equal)
udpports__contains	optional	Free-text filter by udp port (supports multiple values). Example: "137,2002".

updatedat__between	optional	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
updatedat__gt	optional	Gateway updated after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Gateway updated after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Gateway updated before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Gateway updated before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".

Update Gateways

POST /web/api/v2.1/ranger/gateways/update

Change the status of filtered gateways discovered by Network Discovery. You can set the archived status, whether the network behind the gateway may be scanned by Network Discovery, and whether Network Discovery will scan only local networks.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

errors	Errors	false	array

Get graph query list

GET /web/api/v2.1/xdr/graph-explorer/query/management/query

Get graph query list

Parameters

accountids	optional	List of Account IDs to filter by
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
groupids	optional	List of Group IDs to filter by
limit	optional	Limit number of returned items (1-1000)
name__contains	optional	Free-text search filter by query name
querytype	optional	Query type
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
version	optional	Version

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	undefined []

Update graph query

PUT /web/api/v2.1/xdr/graph-explorer/query/management/query/{query_id}

Update graph query

Parameters

accountids	optional	List of Account IDs to filter by
groupids	optional	List of Group IDs to filter by
siteids	optional	List of Site IDs to filter by

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data		false	see Update graph query - response - data table
errors	Errors	false	array

Update graph query - response - data

Name	Description	Required	Value
message	Simple response message denoting action success	false	string

Body Schema

Name	Description	Required	Value
name	Name	true	string
query	Query	true	string
queryDescription	Query description	true	string
shared	Shared	true	boolean

Delete graph query

DELETE /web/api/v2.1/xdr/graph-explorer/query/management/query/{query_id}

Delete graph query

Parameters

accountids	optional	List of Account IDs to filter by
groupids	optional	List of Group IDs to filter by
siteids	optional	List of Site IDs to filter by

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data		false	see Delete graph query - response - data table
errors	Errors	false	array

Delete graph query - response - data

Name	Description	Required	Value
message	Simple response message denoting action success	false	string

Groups

Get Groups

GET /web/api/v2.1/groups

Get data of groups that match the filter. Best practice: use as narrow a filter as you can. The data can be quite long for many groups. The response returns the ID of each group, which you can use in other commands.

BEST PRACTICE

use as narrow a filter as you can. The data can be quite long for many groups. The response returns the ID of each group, which you can use in other commands.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
description	optional	The description for the Group
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
id	optional	Id. Example: "225494730938493804".
isdefault	optional	Is this the default group?

limit	optional	Limit number of returned items (1-1000). Example: "10".
name	optional	Name
query	optional	Free text search on fields name, description
rank	optional	The rank sets the priority of a dynamic group over others. Example: "1".
registrationtoken	optional	Registration token. Example: "eyJ1cmwiOiAiaHR0cHM6Ly9jb25zb2xlLnNlbnRpbmVsb25lM5ldClIsICJzaXRlX2tleSI6IClwNzhkYjliMWUyOTA1Y2NhIn0=".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
type	optional	Group type. Example: "static".
types	optional	A list of Group types. Example: "static".
updatedat__gt	optional	Updated at greater than. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Updated at greater or equal than. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Updated at lesser than. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Updated at lesser or equal than. Example: "2018-02-27T04:49:26.257525Z".

Response Messages

200 - Data retrieved successfully

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Groups - response - pagination table
data	Response data	false	see Get Groups - response - data table
errors	Errors	false	array

Get Groups - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Groups - response - data

Name	Description	Required	Value
createdAt	Timestamp of group creation	false	string
creator	The user that created the group	false	string
creatorId	The ID of the user that created the group	false	string
description	The user-defined description for the Group	false	string
filterId	If the group is dynamic id of the filter which is used to associate agents	false	string
filterName	If the group is dynamic the name of the filter which is used to associate agents	false	string
id	Id	false	string
inherits	True if the policy is inherited from Site, False if the group has its own edited policy	false	boolean
isDefault	True only for the default group of the Site	false	boolean
name	Name	false	string
rank	The rank sets the priority of a dynamic group over others	false	integer
registrationToken	[DEPRECATED] token generation in	false	

	dedicated endpoint - /groups/<group_id>/token		
siteld	The id of the site this group is part of	false	string
totalAgents	Count of agents in the group	false	integer
type	Group type	false	enum
updatedAt	Timestamp of last update	false	string

Create Group

POST /web/api/v2.1/groups

Create a new group. You must create the Group in a Site (run "sites" to get the Site ID) for which you have permissions. If you create a dynamic Group, you must have the ID of a filter saved in the Site (run "filters?sitelds=<id from sites>").

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Create Group - response - data table
errors	Errors	false	array

Create Group - response - data

Name	Description	Required	Value
createdAt	Timestamp of group creation	false	string
creator	The user who created the group	false	string
creatorId	The ID of the user that created the group	false	string
description	The user-defined description for the Group	false	string
filterId	If the group is dynamic id of the filter which is used to associate agents	false	string
id	Id	false	string
isDefault	True only for the default group of the Site	false	boolean
name	Name	false	string
rank	The rank sets the priority of a dynamic group over others	false	integer
registrationToken	[DEPRECATED] token generation in dedicated endpoint - /groups/<group_id>/token	false	
siteId	The id of the site this group is part of	false	string
type	Group type	false	enum
updatedAt	Timestamp of last update	false	string

Body Schema

Name	Description	Required	Value
data	Data	true	see Create Group - body - data table

Create Group - body - data

Name	Description	Required	Value
inherits	True to inherit from site policy.	true	boolean
name	Name	true	string
siteld	The site this group should be part of	true	string
description	The user-defined description for the Group	false	string
filterId	If supplied this group will be dynamic using the filter to associate agents.	false	string
isDefault	Obsolete for POST, always false	false	boolean
policy	The group policy, it is required only if inherits is False, ignored else.	false	see Create Group - body - policy table
rank	Obsolete for post - The rank of the group	false	integer
source	Obsolete - Always MGMT	false	string
type	Type of Group: Static, Dynamic, or Pinned	false	enum

Create Group - body - policy

Name	Description	Required	Value
agentLoggingOn	True if logging is enabled in the agent	false	boolean
agentNotification	[DEPRECATED] Show end point notification on suspicious.Replaced by 'show_suspicious' in the agent UI section	false	boolean
agentUi	Agent ui	false	see Create Group - body - agentUi table
agentUiOn	[DEPRECATED] Show/hide Agent UI. Moved inside the agent UI section	false	boolean
allowRemoteShell	True if Remote Shell is enabled for the scope	false	boolean
allowUnprotectByApprovedProcess	Allow Unprotect By Approved	false	boolean

	Process on/off		
antiTamperingOn	Anti tampering on/off	false	boolean
autoDecommissionDays	Automatic decommission period in days	false	integer
autoDecommissionOn	Auto decommission on	false	boolean
autoFileUpload	Automatic file upload configuration	false	see Create Group - body - autoFileUpload table
autoImmuneOn	Automatic immune on/off - this value must be true since all policies are immune by default	false	boolean
autoMitigationAction	Default action for auto mitigation	false	string
cloudValidationOn	Cloud validation on	false	
createdAt	Timestamp of policy creation	false	string
driftDetectionDelayTime	Drift detection delay time in seconds	false	integer
driverBlocking	Suspicious driver blocking engine on/off	false	boolean
dvAttributesPerEventType	The DV attributes	false	see Create Group - body - dvAttributesPerEventType table
engines	The engines statuses	false	see Create Group - body - engines table
forensicsAutoTriggering	Forensics auto triggering configuration	false	see Create Group - body - forensicsAutoTriggering table
identityConfigurationSettings	Identity configuration	false	see Create Group - body - identityConfigurationSettings table
identityEndpointReporting	Endpoint reporting level	false	enum
identityOn	Identity module on/off	false	boolean
identityReportInterval	Identity telemetry report interval in minutes	false	integer
identityThrottlingInterval	Identity duplicate command consolidation interval in minutes	false	integer
identityUpdateInterval	Identity update interval in minutes	false	integer
informationalAlertsOn	Informational alerts on/off	false	boolean
inheritedFrom	Indicates the parent scope from which this policy is inherited, or 'null' if it is not inherited (modified specifically for the current scope).	false	enum
ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Create Group - body - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean

isDefault	True if this is the tenant policy	false	boolean
isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean
mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean
networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Create Group - body - remoteOpsForensics table
remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Create Group - body - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean
researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first registration	false	boolean
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Regenerate Group Token

PUT /web/api/v2.1/groups/{group_id}/regenerate-key

Get a new Group Token for a static Group. This command requires the Group ID ("groups") and you must have permissions for the Group. If you run this command on a dynamic Group, it ends in an error. If you use the API in scripts to add new endpoints with a Group Token rather than a Site Token, be aware that you must update the token value in your scripts.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

403 - No permission for regenerating a key.

404 - Group not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Regenerate Group Token - response - data table
errors	Errors	false	array

Regenerate Group Token - response - data

Name	Description	Required	Value
registrationToken	Registration token	false	string

Delete Group

DELETE /web/api/v2.1/groups/{group_id}

Delete a Group given by the required Group ID (run "groups"). If there are Agents in the Group, and the Group is dynamic, the next dynamic Groups will collect matching Agents, and unmatched Agents will go to the Default Group. If this is a static Group with Agents, all the Agents will go to the Default Group. (Agents always go to matching dynamic Groups. If a static Group holds Agents, there are no matching dynamic Groups.)

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

404 - Group not found.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Delete Group - response - data table
errors	Errors	false	array

Delete Group - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Update Group

PUT /web/api/v2.1/groups/{group_id}

Change properties of a Group specified by its ID (run "groups"). The body of the request holds all the properties of a Group. You must have access permissions on the Site.
Note: iocAttributes refers to Deep Visibility. If you do not have a Complete SKU, you can remove this set.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions.

404 - Group not found.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Update Group - response - data table
errors	Errors	false	array

Update Group - response - data

Name	Description	Required	Value
createdAt	Timestamp of group creation	false	string
creator	The user who created the group	false	string
creatorId	The ID of the user that created the group	false	string

autoDecommissionDays	Automatic decommission period in days	false	integer
autoDecommissionOn	Auto decommission on	false	boolean
autoFileUpload	Automatic file upload configuration	false	see Update Group - body - autoFileUpload table
autoImmuneOn	Automatic immune on/off - this value must be true since all policies are immune by default	false	boolean
autoMitigationAction	Default action for auto mitigation	false	string
cloudValidationOn	Cloud validation on	false	
createdAt	Timestamp of policy creation	false	string
driftDetectionDelayTime	Drift detection delay time in seconds	false	integer
driverBlocking	Suspicious driver blocking engine on/off	false	boolean
dvAttributesPerEventType	The DV attributes	false	see Update Group - body - dvAttributesPerEventType table
engines	The engines statuses	false	see Update Group - body - engines table
forensicsAutoTriggering	Forensics auto triggering configuration	false	see Update Group - body - forensicsAutoTriggering table
identityConfigurationSettings	Identity configuration	false	see Update Group - body - identityConfigurationSettings table
identityEndpointReporting	Endpoint reporting level	false	enum
identityOn	Identity module on/off	false	boolean
identityReportInterval	Identity telemetry report interval in minutes	false	integer
identityThrottlingInterval	Identity duplicate command consolidation interval in minutes	false	integer
identityUpdateInterval	Identity update interval in minutes	false	integer
informationalAlertsOn	Informational alerts on/off	false	boolean
inheritedFrom	Indicates the parent scope from which this policy is inherited, or 'null' if it is not inherited (modified specifically for the current scope).	false	enum
ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Update Group - body - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean
isDefault	True if this is the tenant policy	false	boolean

isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean
mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean
networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Update Group - body - remoteOpsForensics table
remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Update Group - body - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean
researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first registration	false	boolean
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

Update Group - body - agentUi

Name	Description	Required	Value
agentUiOn	Agent ui on	false	boolean

contactCompany	Contact company	false	string
contactDirectMessage	Contact direct message	false	string
contactEmail	Contact email	false	string
contactFreeText	Contact free text	false	string
contactOther	Contact other	false	string
contactPhoneNumber	Contact phone number	false	string
contactSupportWebsite	Contact support website	false	string
devicePopUpNotifications	Device pop up notifications	false	boolean
maxEventAgeDays	Max event age days	false	integer
showAgentWarnings	Show agent warnings	false	boolean
showDeviceTab	Show device tab	false	boolean
showQuarantineTab	Show quarantine tab	false	boolean
showSupport	Show support	false	boolean
showSuspicious	Show suspicious	false	boolean
threatPopUpNotifications	Threat pop up notifications	false	boolean

Update Group - body - autoFileUpload

Name	Description	Required	Value
enabled	Automatic file upload on/off	false	boolean
includeBenignFiles	Upload benign files	false	boolean
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum file size (MB) to upload	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalDiskUsage	Maximum local disk usage (MB) for uploaded files	false	integer
maxLocalDiskUsageLimit	Limit for the maximum local disk usage (MB) for uploaded files	false	integer

Update Group - body - dvAttributesPerEventType

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	see Update Group - body - autoInstallBrowserExtensions table
behavioralIndicators	Behavioral indicators event	false	see Update Group - body - behavioralIndicators table
commandScripts	Command scripts event	false	see Update Group - body - commandScripts table
crossProcess	Cross process event	false	see Update Group - body - crossProcess table
dataMasking	Data masking	false	see Update Group - body - dataMasking table
dllModuleLoad	DLL module load event	false	see Update Group - body - dllModuleLoad table
dns	Network event - DNS	false	see Update Group - body - dns table
driver	Driver	false	see Update Group - body - driver table
externalDeviceActivity	External Device Activity	false	see Update Group - body - externalDeviceActivity table
file	File event	false	see Update Group - body - file table
ip	Network event - IP	false	see Update Group - body - ip table
login	User login/logout event	false	see Update Group - body - login table
namedPipe	Named Pipe	false	see Update Group - body - namedPipe table
namedPipeExtended	Named Pipe Extended	false	see Update Group - body - namedPipeExtended table
openDirectoryActivity	Open Directory Activity	false	see Update Group - body - openDirectoryActivity table
process	Process event	false	see Update Group - body - process table
profileActivity	Profile Activity	false	see Update Group - body - profileActivity table
registry	Registry event	false	see Update Group - body - registry table
scheduledTask	Scheduled task event	false	see Update Group - body - scheduledTask table
smartFileMonitoring	Smart file monitoring	false	see Update Group - body - smartFileMonitoring table
url	URL Actions event	false	see Update Group - body - url table
userSubstitution	User Substitution	false	see Update Group - body - userSubstitution table
windowsEventLogs	Windows Event Log	false	see Update Group - body - windowsEventLogs table
windowsEventLogsExtended	Windows Event Log Extended	false	see Update Group - body - windowsEventLogsExtended table

Update Group - body - autoInstallBrowserExtensions

Name	Description	Required	Value
------	-------------	----------	-------

autoInstallBrowserExtensions	Auto install browser extensions	false	boolean
------------------------------	---------------------------------	-------	---------

Update Group - body - behavioralIndicators

Name	Description	Required	Value
dvEventTypeBehavioralIndicators	Behavioral indicators event	false	boolean

Update Group - body - commandScripts

Name	Description	Required	Value
dvEventTypeCommandScripts	Command scripts event	false	boolean

Update Group - body - crossProcess

Name	Description	Required	Value
dvEventTypeCrossProcessDuplicateProcess	Duplicate Process Event Type	false	boolean
dvEventTypeCrossProcessDuplicateThread	Duplicate Thread Event Type	false	boolean
dvEventTypeCrossProcessOpenProcesses	Open Process Event Type	false	boolean
dvEventTypeCrossProcessRemoteThread	Remote Thread Event Type	false	boolean

Update Group - body - dataMasking

Name	Description	Required	Value
dataMasking	Data masking	false	boolean

Update Group - body - dllModuleLoad

Name	Description	Required	Value
dvEventTypeDllModuleLoad	DLL module load event	false	boolean

Update Group - body - dns

Name	Description	Required	Value
dvEventTypeDns	Network event - DNS	false	boolean
dvEventTypeExtendedDns	Extended DNS event	false	boolean

Update Group - body - driver

Name	Description	Required	Value
dvEventTypeDriverLoad	Driver Load	false	boolean

Update Group - body - externalDeviceActivity

Name	Description	Required	Value
dvEventTypeExternalDeviceConnect	External Device Connect Event Type	false	boolean
dvEventTypeExternalDeviceDisconnect	External Device Disconnect Event Type	false	boolean

Update Group - body - file

Name	Description	Required	Value
dvEventTypeFileCreation	File Creation Event Type	false	boolean
dvEventTypeFileDeletion	File Deletion Event Type	false	boolean
dvEventTypeFileModification	File Modification Event Type	false	boolean
dvEventTypeFileRename	File Rename Event Type	false	boolean
fullDiskScan	File Scan Event Type	false	boolean

Update Group - body - ip

Name	Description	Required	Value
dvEventTypeIpConnect	IP Connect Event Type	false	boolean
dvEventTypeIpListen	IP Listen Event Type	false	boolean

Update Group - body - login

Name	Description	Required	Value
dvEventTypeLoginLoggedIn	User Login Event Type	false	boolean
dvEventTypeLoginLoggedOut	User Logout Event Type	false	boolean

Update Group - body - namedPipe

Name	Description	Required	Value
dvEventTypeNamedPipeConnection	Named Pipe Connection Event Type	false	boolean
dvEventTypeNamedPipeCreation	Named Pipe Creation Event Type	false	boolean

Update Group - body - namedPipeExtended

Name	Description	Required	Value
namedPipeExtended	Named Pipe Connection Extended Event Type	false	boolean

Update Group - body - openDirectoryActivity

Name	Description	Required	Value
dvEventTypeOpenDirectoryAddAttributeValue	Add Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryAddMember	Add Member to Group Event Type	false	boolean

erToGroup			
dvEventTypeOpenDirectoryCreateGroup	Create Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateUser	Create User Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteGroup	Delete Group Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteUser	Delete User Event Type	false	boolean
dvEventTypeOpenDirectoryDisableUser	Disable User Event Type	false	boolean
dvEventTypeOpenDirectoryEnableUser	Enable User Event Type	false	boolean
dvEventTypeOpenDirectoryModifyPassword	Modify Password Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveAttributeValue	Remove Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveMemberFromGroup	Remove Member from Group Event Type	false	boolean
dvEventTypeOpenDirectorySetAttributeValues	Set Attribute Values Event Type	false	boolean
dvEventTypeOpenDirectorySetMembersOfGroup	Set Members of Group Event Type	false	boolean

Update Group - body - process

Name	Description	Required	Value
dvEventTypeProcessCreation	Process Creation Event Type	false	boolean
dvEventTypeProcessExit	Process Exit Event Type	false	boolean
dvEventTypeProcessModification	Process Termination Event Type	false	boolean

Update Group - body - profileActivity

Name	Description	Required	Value
------	-------------	----------	-------

dvEventTypeProfileAddition	Profile Addition Event Type	false	boolean
dvEventTypeProfileRemoval	Profile Removal Event Type	false	boolean

Update Group - body - registry

Name	Description	Required	Value
dvEventTypeRegistryKeyCreated	Registry Key Created Event Type	false	boolean
dvEventTypeRegistryKeyDelete	Registry Key Delete Event Type	false	boolean
dvEventTypeRegistryKeyExport	Registry Key Export Event Type	false	boolean
dvEventTypeRegistryKeyImport	Registry Key Import Event Type	false	boolean
dvEventTypeRegistryKeyRename	Registry Key Rename Event Type	false	boolean
dvEventTypeRegistryKeySecurityChanged	Registry Key Security Changed Event Type	false	boolean
dvEventTypeRegistryValueCreated	Registry Value Crated Event Type	false	boolean
dvEventTypeRegistryValueDeleted	Registry Value Deleted Event Type	false	boolean
dvEventTypeRegistryValueModified	Registry Value Modified Event Type	false	boolean

Update Group - body - scheduledTask

Name	Description	Required	Value
dvEventTypeScheduledTaskDelete	Scheduled Task Delete Event Type	false	boolean
dvEventTypeScheduledTaskRegister	Scheduled Task Register Event Type	false	boolean
dvEventTypeScheduledTaskStart	Scheduled Task Start Event Type	false	boolean
dvEventTypeScheduledTaskTrigger	Scheduled Task Trigeer Event Type	false	boolean
dvEventTypeScheduledTaskUpdate	Scheduled Task Update Event Type	false	boolean

Update Group - body - smartFileMonitoring

Name	Description	Required	Value
smartFileMonitoring	Smart file monitoring	false	boolean

Update Group - body - url

Name	Description	Required	Value
dvEventTypeUrl	URL Actions event	false	boolean

Update Group - body - userSubstitution

Name	Description	Required	Value
dvEventTypeSu	su Event Type	false	boolean
dvEventTypeSudo	sudo Event Type	false	boolean

Update Group - body - windowsEventLogs

Name	Description	Required	Value
dvEventTypeWindowsEventLogCreation	Windows Event Log Creation Event Type	false	boolean

Update Group - body - windowsEventLogsExtended

Name	Description	Required	Value
windowsEventLogsExtended	Windows Event Log Extended Event Type	false	boolean

Update Group - body - engines

Name	Description	Required	Value
applicationControl	application control	false	enum
applicationDetection	application detection	false	enum
dataFiles	data files	false	enum
driftDetection	drift detection	false	enum

executables	executables	false	enum
exploits	exploits	false	enum
idr	idr	false	enum
lateralMovement	lateral movement	false	enum
networkProtection	network protection	false	enum
penetration	penetration	false	enum
preExecution	on-write	false	enum
preExecutionSuspicious	pre execution suspicious	false	enum
pup	potentially unwanted applications (PUP)	false	enum
remoteShell	remote shell	false	enum
reputation	reputation	false	enum

Update Group - body - forensicsAutoTriggering

Name	Description	Required	Value
linuxEnabled	True if linux forensics is enabled	false	boolean
linuxProfileId	The profile id for the linux forensics	false	string
linuxProfileName	The profile name for the linux forensics	false	string
macosEnabled	True if macos forensics is enabled	false	boolean
macosProfileId	The profile id for the macos forensics	false	string
macosProfileName	The profile name for the macos forensics	false	string
windowsEnabled	True if windows forensics is enabled	false	boolean
windowsProfileId	The profile id for the windows forensics	false	string
windowsProfileName	The profile name for the windows forensics	false	string

Update Group - body - identityConfigurationSettings

Name	Description	Required	Value
identityMaxCpuThreshold	Identity maximum CPU threshold	false	integer
identityMaxDefinedMemoryLimit	Identity maximum defined memory limit in MB	false	integer
identityMaxMemoryLimit	Identity maximum memory limit in MB	false	integer
identityMaxMemoryUsage	Identity maximum memory usage	false	integer
identityThresholdMonitoring	True if Identity threshold monitoring is enabled	false	boolean

Update Group - body - iocAttributes

Name	Description	Required	Value
autoInstallBrowserExtensions	Update auto install browser extensions	false	boolean
behavioralIndicators	Update behavioral indicators	false	boolean
commandScripts	Update command scripts	false	boolean
crossProcess	Update cross process	false	boolean
dataMasking	Update data masking	false	boolean
dllModuleLoad	Update DLL module load	false	boolean
dns	Network event - DNS	false	boolean
driver	Driver	false	boolean
externalDeviceActivity	External Device Activity	false	boolean
fds	Full disk scan	false	boolean
file	File event	false	boolean
ip	Network event - IP	false	boolean
login	User login/logout event	false	boolean
namedPipe	Named Pipe	false	boolean
namedPipeExtended	Named Pipe Extended	false	boolean
openDirectoryActivity	Open Directory Activity	false	boolean
process	Process creation event	false	boolean
profileActivity	Profile Activity	false	boolean
registry	Registry event	false	boolean

scheduledTask	Scheduled task event	false	boolean
smartFileMonitoring	Smart file monitoring	false	boolean
url	loc URI	false	boolean
userSubstitution	User Substitution	false	boolean
windowsEventLogs	Windows Event Log	false	boolean
windowsEventLogsExtended	Windows Event Log Extended	false	boolean

Update Group - body - remoteOpsForensics

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection process	false	integer
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Update Group - body - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer

maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Get Group by ID

GET /web/api/v2.1/groups/{group_id}

Get data of a given Group. To get a Group ID, run "groups". This command responds with the ID of the Site of the Group, Group name, type (dynamic or static), and similar data. Your username must permissions for the Site.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get Group by ID - response - data table
errors	Errors	false	array

Get Group by ID - response - data

Name	Description	Required	Value
createdAt	Timestamp of group creation	false	string
creator	The user who created the group	false	string
creatorId	The ID of the user that created the group	false	string
description	The user-defined description for the Group	false	string
filterId	If the group is dynamic id of the filter which is used to associate agents	false	string
id	Id	false	string
isDefault	True only for the default group of the Site	false	boolean
name	Name	false	string
rank	The rank sets the priority of a dynamic group over others	false	integer
registrationToken	[DEPRECATED] token generation in dedicated endpoint - /groups/<group_id>/token	false	
siteId	The id of the site this group is part of	false	string
type	Group type	false	enum
updatedAt	Timestamp of last update	false	string

Revert Policy

PUT /web/api/v2.1/groups/{group_id}/revert-policy

A Group can have a policy that is different from its Site policy. Use this command to revert the changes on the Group policy to inherit the Site policy. Your user must have permissions on the Site.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Revert Policy - response - data table
errors	Errors	false	array

Revert Policy - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Body Schema

Name	Description	Required	Value
data	Data	false	see Revert Policy - body - data table

Revert Policy - body - data

Name	Description	Required	Value
id	Id	false	string

Move Agents

PUT /web/api/v2.1/groups/{group_id}/move-agents

Move Agents that match the filter to a Group. The Group ID (run "groups") is required and there can be only one. This will move the matched Agents that are in the same Site as the given Group.

Response Messages

204 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

409 - Conflict

Body Schema

Name	Description	Required	Value
filter	Specification of which agents should be moved	true	see Move Agents - body - filter table

Move Agents - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
activeProtection	Included agent active protections	false	string []
activeThreats	Include Agents with this amount of active threats	false	integer
activeThreats__gt	Include Agents with at least this amount of active threats	false	integer
adComputerMember__contains	Free-text filter by Active Directory computer groups string (supports multiple values)	false	string []
adComputerName__contains	Free-text filter by Active Directory computer name string (supports multiple values)	false	string []
adComputerQuery__contains	Free-text filter by Active Directory computer name or its groups (supports multiple values)	false	string []
adQuery	An Active Directory query string	false	string
adQuery__contains	Free-text filter by Active Directory string (supports multiple values)	false	string []
adUserMember__contains	Free-text filter by Active Directory user groups string (supports multiple values)	false	string []
adUserName__contains	Free-text filter by Active Directory username string (supports multiple values)	false	string []
adUserQuery__contains	Free-text filter by Active Directory computer name or its groups (supports multiple values)	false	string []
agentIds	(DEPRECATED; use 'ids' instead) List of agent ids to move to a new group	false	string []
agentNamespace__contains	Free-text filter by agent namespace (supports multiple values)	false	string []
agentOperatingMode__contains	Free-text filter by Agent Operating Mode (supports multiple values)	false	string []

agentOperatingModes	Agent operating mode in	false	string []
agentOperatingModesNin	Agent operating mode nin	false	string []
agentPodName__contains	Free-text filter by agent pod name (supports multiple values)	false	string []
agentVersion__between	Version range for agent version (format: <from_version>-<to_version>, inclusive)	false	string
agentVersion__gt	Agents versions greater than given version	false	string
agentVersion__gte	Agents versions greater than or equal to given version	false	string
agentVersion__lt	Agents versions less than given version	false	string
agentVersion__lte	Agents versions less than or equal to given version	false	string
agentVersions	Agent versions to include	false	string []
agentVersionsNin	Agent versions not to include	false	string []
appsVulnerabilityStatuses	Apps vulnerability status in	false	string []
appsVulnerabilityStatusesNin	Apps vulnerability status nin	false	string []
awsRole__contains	Free-text filter by aws role(supports multiple values)	false	string []
awsSecurityGroups__contains	Free-text filter by aws securityGroups(supports multiple values)	false	string []
awsSubnetIds__contains	Free-text filter by aws subnet ids (supports multiple values)	false	string []
azureResourceGroup__contains	Free-text filter by azure resource group(supports multiple values)	false	string []
cloudAccount__contains	Free-text filter by cloud account (supports multiple values)	false	string []
cloudImage__contains	Free-text filter by cloud image (supports multiple values)	false	string []
cloudInstanceId__contains	Free-text filter by cloud instance id(supports multiple values)	false	string []
cloudInstanceSize__contains	Free-text filter by cloud instance size(supports multiple values)	false	string []
cloudLocation__contains	Free-text filter by cloud location	false	string []

	(supports multiple values)		
cloudNetwork__contains	Free-text filter by cloud network (supports multiple values)	false	string []
cloudProvider	Agents from which cloud provider	false	string []
cloudProviderNin	Exclude Agents from these cloud provider	false	string []
cloudTags__contains	Free-text filter by cloud tags (supports multiple values)	false	string []
clusterName__contains	Free-text filter by cluster name (supports multiple values)	false	string []
computerName	Computer name	false	string
computerName__contains	Free-text filter by computer name (supports multiple values)	false	string []
computerName__like	Match computer name partially (substring)	false	string
computerNameOrUuid__contains	Free-text filter by computer name or uuid (supports multiple values)	false	string []
consoleMigrationStatuses	Migration status in	false	string []
consoleMigrationStatusesNin	Migration status nin	false	string []
containerizedWorkloadCounts	Containerized workload counts	false	see Move Agents - body - containerizedWorkloadCounts table
coreCount__between	Possible number of CPU cores (inclusive)	false	string
coreCount__gt	CPU cores (more than)	false	integer
coreCount__gte	CPU cores (more than or equal)	false	integer
coreCount__lt	CPU cores (less than)	false	integer
coreCount__lte	CPU cores (less than or equal)	false	integer
cpuCount__between	Possible number of CPU cores (inclusive)	false	string
cpuCount__gt	Number of CPUs (more than)	false	integer
cpuCount__gte	Number of CPUs (more than or equal)	false	integer
cpuCount__lt	Number of CPUs (less than)	false	integer
cpuCount__lte	Number of CPUs (less than or equal)	false	integer
cpuld__contains	Free-text filter by CPU name (supports multiple values)	false	string []
createdAt__between	Date range for creation time (format:	false	string

	<from_timestamp>-<to_timestamp>, inclusive)		
createdAt__gt	Agents created after this timestamp	false	string
createdAt__gte	Agents created after or at this timestamp	false	string
createdAt__lt	Agents created before this timestamp	false	string
createdAt__lte	Agents created before or at this timestamp	false	string
csvFilterId	The ID of the CSV file to filter by	false	string
decommissionedAt__between	Date range for decommission time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
decommissionedAt__gt	Agents decommissioned after this timestamp	false	string
decommissionedAt__gte	Agents decommissioned after or at this timestamp	false	string
decommissionedAt__lt	Agents decommissioned before this timestamp	false	string
decommissionedAt__lte	Agents decommissioned before this timestamp	false	string
domains	Included network domains	false	string []
domainsNin	Not included network domains	false	string []
ecsClusterName__contains	Free-text filter by ECS cluster name	false	string []
ecsServiceArn__contains	Free-text filter by ECS service arn	false	string []
ecsServiceName__contains	Free-text filter by ECS service name	false	string []
ecsTaskArn__contains	Free-text filter by ECS task arn	false	string []
ecsTaskAvailabilityZone__contains	Free-text filter by ECS task availability zone	false	string []
ecsTaskDefinitionArn__contains	Free-text filter by ECS task definition arn	false	string []
ecsTaskDefinitionFamily__contains	Free-text filter by ECS task definition family	false	string []
ecsTaskDefinitionRevision__contains	Free-text filter by ECS task definition revision	false	string []
ecsType__contains	Free-text filter by ECS type	false	string []
ecsVersion__contains	Free-text filter by ECS version	false	string []

encryptedApplications	Disk encryption status	false	boolean []
entraId__contains	Free-text filter by Entra ID (supports multiple values)	false	string []
externalId__contains	Free-text filter by external ID (Customer ID)	false	string []
externalIp__contains	Free-text filter by visible IP (supports multiple values)	false	string []
filteredGroupIds	List of Group IDs to filter by	false	string []
filteredSiteIds	List of Site IDs to filter by	false	string []
filterId	Include all Agents matching this saved filter	false	string
firewallEnabled	The agents supports Firewall Control and it is enabled for the agent's group	false	boolean []
gatewayIp	Gateway ip	false	string
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of Group IDs to filter by	false	string []
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean []
hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
ids	Included Agent IDs	false	string []
idsNin	Excluded Agent IDs	false	string []
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []
isActive	Include only active Agents	false	boolean []
isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []

isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA enabled if True, or not if False	false	boolean []
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []
isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastActiveDate__gt	Agents last active after this time	false	string
lastActiveDate__gte	Agents last active after or at this time	false	string
lastActiveDate__lt	Agents last active before this time	false	string
lastActiveDate__lte	Agents last active before or at this time	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string

lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string
liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceLocalnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum

osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []
osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []

remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []
scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot	false	boolean []

	to succeed		
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer
totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Move Agents - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer

podsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Update Ranks

PUT /web/api/v2.1/groups/ranks

An Agent can belong to only one Group. If the Agent matches multiple Dynamic Groups, it goes to the Group with the highest rank. The "rank" parameter has a minimum of "1". The lower the integer, the higher priority it has to collect Agents. Make sure the IDs of the groups in this command are for Dynamic groups.

Response Messages

204 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Body Schema

Name	Description	Required	Value
data	Data	true	see Update Ranks - body - data table

Get Site registration token by ID - response - data

Name	Description	Required	Value
token	Token	false	string

Hashes

Hash Reputation verdict

GET /web/api/v2.1/hashes/{hash}/verdict

[DEPRECATED] Get the verdict of the of a hash, given the required SHA1.

A hash, either malicious or non-malicious, means it has been marked as such by the Reputation's sources.

An unknown answer is given for hashes that are not yet known by Reputation.

Response Messages

200 - Verdict of the hash known to the management

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Hash Reputation verdict - response - data table
errors	Errors	false	array

Hash Reputation verdict - response - data

Name	Description	Required	Value
verdict	The hash verdict, could be malicious, non-malicious or unknown	false	string

Hyperautomation

List all workflow executions

GET /web/api/v2.1/hyper-automate/api/public/workflow-execution

Parameters

accountids	optional	
created_at__gte	optional	
created_at__lt	optional	
cursor	optional	Base64-url-encoded cursor for cursor-based pagination. Omit on the first request or pass the literal string <code>`"null"`</code>; on subsequent requests, pass the <code>`pagination.nextCursor`</code> value returned by the previous response. When <code>`nextCursor`</code> is the literal string <code>`"null"`</code>, the end of the result set has been reached. Requires <code>`sortBy`</code> to be set; <code>`sortBy`</code> and <code>`sortOrder`</code> (default <code>`ASC`</code>) must match the values used when the cursor was issued, otherwise the request fails with HTTP 400. A malformed cursor returns HTTP 400 <code>`invalid cursor`</code>. The query filters must be preserved across multiple requests fetching subsequent pages.
groupids	optional	
integrations	optional	
is_snippet	optional	
limit	optional	

scope_ids	optional	
siteids	optional	
skip	optional	
sortby	optional	
sortorder	optional	
states	optional

Get Exposures - body - filter

Name	Description	Required	Value
detectionName	Filter by specific detection names	false	string []
detectionStatus	Filter by exposure detection status	false	string []
domainName	Filter by Active Directory domain names	false	string []
forestName	Filter by Active Directory forest names	false	string []
severity	Filter by exposure severity level	false	string []
source	Filter by detection source	false	string []

Get Affected Objects

POST /web/api/v2.1/ranger-ad/get-affected-objects

Use the below Cloud API to get all the affected objects based on the selected filters

Parameters

accountids	optional	List of account IDs separated by comma
limit	optional	Limit number of returned items (1-1000). Example: "10".
siteids	optional	List of site IDs separated by comma
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Affected Objects - response - pagination table
data	Response data	false	see Get Affected Objects - response - data table
errors	Errors	false	array

Get Affected Objects - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Affected Objects - response - data

Name	Description	Required	Value
id	Unique identifier for the affected object	true	integer
runId	Identifier of the detection run that found this object	true	integer
accountStatus	Current status of the user account (enabled/disabled)	false	string
attr1	Reserved attribute field for exposure specific data	false	string
attr2	Reserved attribute field for exposure specific data	false	string
attr3	Reserved attribute field for exposure specific data	false	string
attr4	Reserved attribute field for exposure specific data	false	string
attr5	Reserved attribute field for exposure specific data	false	string
attr6	Reserved attribute field for exposure specific data	false	string
attr7	Reserved attribute field for exposure specific data	false	string
badPasswordTime	Unix timestamp of the last bad password attempt	false	integer

badPwdCount	Number of bad password attempts	false	integer
caIssuerName	Certificate Authority issuer name	false	string
caServerName	Certificate Authority server name	false	string
certAuthorityName	Name of the Certificate Authority	false	string
certificateAuthority	Certificate Authority that issued the certificate	false	string
certSerialNumber	Serial number of the certificate	false	string
certSubjectName	Subject name of the certificate	false	string
commonName	Common name (CN) of the Active Directory object	false	string
containerName	Name of the container holding the object	false	string
delegation	Delegation settings for the account	false	string
description	Description of the Azure AD object	false	string
displayName	Display name of the Active Directory object	false	string
dn	Distinguished Name (DN) of the object in Active Directory	false	string
dnsHostName	DNS hostname of the computer object	false	string
endUserConsentSetting	End user consent settings for the application	false	string
firstSeen	Unix timestamp when the object was first detected	false	integer
gPCFilePath	Group Policy Container file system path	false	string
groupType	Type of Active Directory group (Security, Distribution, etc.)	false	string
guestUser	Whether the user is a guest user in Azure AD	false	boolean
guestUserAccess	Access level granted to guest users	false	string
joinDeviceMFAConfig	Multi-factor authentication configuration for joined devices	false	string
lastLogonTimestamp	Unix timestamp of the last logon	false	integer
lockoutStatus	Whether the account is currently locked out	false	boolean

mfaRegistered	Whether the user is registered for multi-factor authentication	false	boolean
msdsGroupMsaMembership	Managed Service Account (MSA) group membership	false	string
objectGUID	Globally Unique Identifier (GUID) of the object	false	string
objectSid	Security Identifier (SID) of the object	false	string
objectType	Type of Active Directory object (User, Computer, Group, etc.)	false	string
os	Operating system information for computer objects	false	string
passwordExpiryTime	Unix timestamp when the password expires	false	integer
permission	Permission level or access rights	false	string
permissionName	Name of the permission granted	false	string
permissionType	Type of permission (Application, Delegated, etc.)	false	string
pwdLastSet	Unix timestamp when password was last set	false	integer
resource	Resource to which the permission applies	false	string
runTime	Unix timestamp when the detection was run	false	integer
samAccountName	Security Account Manager (SAM) account name	false	string
spn	Service Principal Name (SPN) associated with the account	false	string
templateName	Certificate template name	false	string
upn	User Principal Name of the object	false	string
username	Username of the Azure AD user	false	string
whenChanged	Unix timestamp when the object was last modified	false	integer
whenCreated	Unix timestamp when the object was created	false	integer

Body Schema

Name	Description	Required	Value
filter	Filtering criteria for affected objects	true	see Get Affected Objects - body - filter table

Get Affected Objects - body - filter

Name	Description	Required	Value
detectionName	Filter by specific detection names (required)	false	string []
detectionSrc	Filter by detection module source	false	string []
dn	Filter by Distinguished Name (DN) of objects	false	string []
domainName	Filter by Active Directory domain names (required)	false	string []
forestName	Filter by Active Directory forest names	false	string []
objectType	Filter by Active Directory object type	false	string []
runJobType	Filter by assessment job type	false	string []

Trigger Assessment

POST /web/api/v2.1/ranger-ad/trigger-assessment

Use the below Cloud API to trigger ADAssessment

Parameters

accountids	optional	List of account IDs separated by comma
siteids	optional	List of site IDs separated by comma

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Trigger Assessment - response - data table
errors	Errors	false	array

Trigger Assessment - response - data

Name	Description	Required	Value
message	Success message describing the completed operation	false	string
success	Indicates a successful operation	false	boolean

Body Schema

Name	Description	Required	Value
filter	Assessment trigger configuration	true	see Trigger Assessment - body - filter table

Trigger Assessment - body - filter

Name	Description	Required	Value
isFullScan	Whether to perform a full scan (true) or reassess specific exposures (false)	true	boolean
domainName	List of domain names to scan (used when isFullScan=true)	false	string []
exposureList	List of specific exposures to reassess (used when isFullScan=false)	false	see Trigger Assessment - body - exposureList table
scanSource	Source type for full scan (OnPrem-AD or Azure-AD)	false	enum

Trigger Assessment - body - exposureList

Name	Description	Required	Value
detectionName	Name of the detection to reassess	true	string
domainName	Domain name where the exposure exists	true	string

Set Skipped Exposures

POST /web/api/v2.1/ranger-ad/set-skipped-exposures

Use the below Cloud API to set the list of exposures to be skipped

Parameters

accountids	optional	List of account IDs separated by comma
siteids	optional	List of site IDs separated by comma

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Set Skipped Exposures - response - data table
errors	Errors	false	array

Set Skipped Exposures - response - data

Name	Description	Required	Value
message	Success message describing the completed operation	false	string
success	Indicates a successful operation	false	boolean

Body Schema

Name	Description	Required	Value
filter	Filtering criteria for exposures to mark as skipped	true	see Set Skipped Exposures - body - filter table

Set Skipped Exposures - body - filter

Name	Description	Required	Value
detectionName	List of detection names to mark as skipped (required)	false	string []
domainName	List of domain names where exposures should be skipped (required)	false	string []
forestName	List of forest names to filter by	false	string []

Set Acknowledged Status

POST /web/api/v2.1/ranger-ad/set-ack-status

Use the below Cloud API to set acknowledgement status

Parameters

accountids	optional	List of account IDs separated by comma
siteids	optional	List of site IDs separated by comma

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Set Acknowledged Status - response - data table
errors	Errors	false	array

Set Acknowledged Status - response - data

Name	Description	Required	Value
message	Success message describing the completed operation	false	string
success	Indicates a successful operation	false	boolean

Body Schema

Name	Description	Required	Value
filter	Filtering criteria for exposures to acknowledge	true	see Set Acknowledged Status - body - filter table

Set Acknowledged Status - body - filter

Name	Description	Required	Value
detectionName	List of detection names to acknowledge (required)	false	string []
domainName	List of domain names where exposures should be acknowledged (required)	false	string []
forestName	List of forest names to filter by	false	string []

Identity AD Service - Configuration

Delete AD configuration

POST /web/api/v2.1/identity/adservice/api/deleteAdConfiguration

Delete one or more AD configurations

Response Messages

200 - Successfully deleted AD configurations

401 - Unauthorized

403 - Forbidden

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	

Body Schema

Name	Description	Required	Value
filter	Enter exactly one scope based on the user's scope level: use accountIds for account-scoped users, siteIds for site-scoped users, or groupIds for group-scoped users.	false	see Delete AD configuration - body - filter table
input		false	integer []

Delete AD configuration - body - filter

Name	Description	Required	Value
accountIds	Use when the user is at account scope.	false	string []
groupIds	Use when the user is at group scope.	false	string []
siteIds	Use when the user is at site scope.	false	string []

Add complete AD configuration

POST /web/api/v2.1/identity/adservice/api/addCompleteAdConfiguration

Add a new AD configuration together with its refresh schedule configuration

Response Messages

200 - Successfully added complete AD configuration

401 - Unauthorized

403 - Forbidden

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	

Body Schema

Name	Description	Required	Value
filter	Enter exactly one scope based on the user's scope level: use accountIds for account-scoped users, siteIds for site-scoped users, or groupIds for group-scoped users.	false	see Add complete AD configuration - body - filter table
input		false	see Add complete AD configuration - body - input table

Add complete AD configuration - body - filter

Name	Description	Required	Value
accountIds	Use when the user is at account scope.	false	string []
groupIds	Use when the user is at group scope.	false	string []
siteIds	Use when the user is at site scope.	false	string []

Add complete AD configuration - body - input

Name	Description	Required	Value
adConfigurationInput		false	see Add complete AD configuration - body - adConfigurationInput table
adRefreshScheduleConfigurationInput		false	see Add complete AD configuration - body - adRefreshScheduleConfigurationInput table

Add complete AD configuration - body - adConfigurationInput

Name	Description	Required	Value
accessOverTrustInfo		false	see Add complete AD configuration - body - accessOverTrustInfo table
adConfigId		false	integer
adSync		false	boolean
allowedScopes		false	undefined []
assessOtherDomainsInForest		false	boolean
cloudLinkId		false	integer
createdAt		false	see Add complete AD configuration - body - createdAt table
domainControllerFqdn		false	string
domainName		false	string
enableThreatDetection		false	boolean
encryptionMethod		false	enum
featuresOpted		false	string []

isAllScopesAllowed		false	boolean
ldapReferral		false	boolean
password		false	string
update		false	boolean
userName		false	string
useWinRmOverSsl		false	boolean

Add complete AD configuration - body - accessOverTrustInfo

Name	Description	Required	Value
accessOverTrustEnabled		false	boolean
trustingDomainControllerFqdn		false	string
trustingDomainName		false	string

Add complete AD configuration - body - createdAt

Name	Description	Required	Value
scopeId		false	string
scopeLevel		false	enum
scopeName		false	string
scopePath		false	string

Add complete AD configuration - body - adRefreshScheduleConfigurationInput

Name	Description	Required	Value
ad_domain_name		false	string
day_of_month		false	integer
frequency		false	enum
hour		false	integer
minute		false	integer

time_zone		false	string
weekday		false	enum

Get timezones

GET /web/api/v2.1/identity/adservice/api/timezones

Retrieve list of available timezone pairs

Parameters

accountids	optional	List of account IDs separated by comma
siteids	optional	List of site IDs separated by comma

Response Messages

200 - Successfully retrieved timezones

401 - Unauthorized

403 - Forbidden

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	

Get AD domains

GET /web/api/v2.1/identity/adservice/api/getAdDomains

Retrieve AD domain information

Parameters

accountids	optional	List of account IDs separated by comma
siteids	optional	List of site IDs separated by comma

Response Messages

200 - Successfully retrieved AD domains

401 - Unauthorized

403 - Forbidden

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	

Get available features

GET /web/api/v2.1/identity/adservice/api/availableFeatures

Retrieve list of available AD features

Parameters

accountids	optional	List of account IDs separated by comma
siteids	optional	List of site IDs separated by comma

Response Messages

200 - Successfully retrieved available features

401 - Unauthorized

403 - Forbidden

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	

Get AD configurations

GET /web/api/v2.1/identity/adservice/api/adConfigurations

Retrieve all AD configurations

Parameters

accountids	optional	List of account IDs separated by comma
siteids	optional	List of site IDs separated by comma

Response Messages

200 - Successfully retrieved AD configurations

401 - Unauthorized

403 - Forbidden

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	

Get AD configuration features

GET /web/api/v2.1/identity/adservice/api/adConfigurationFeatures

Retrieve list of AD configuration features

Parameters

accountids	optional	List of account IDs separated by comma
siteids	optional	List of site IDs separated by comma

Response Messages

200 - Successfully retrieved AD configuration features

401 - Unauthorized

403 - Forbidden

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	

Identity AD Service - Connector

Replace AD Connector

POST /web/api/v2.1/identity/adservice/api/replaceAdConnector

Replace the AD connector with a new agent

Parameters

agentuuid	required	Agent UUID
-----------	----------	------------

Response Messages

200 - Successfully replaced AD Connector

401 - Unauthorized

403 - Forbidden

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	

Body Schema

Name	Description	Required	Value
filter	Enter exactly one scope based on the user's scope level: use accountlds for account-scoped users, sitelds for site-scoped users, or grouplds for group-scoped users.	false	see Replace AD Connector - body - filter table

Replace AD Connector - body - filter

Name	Description	Required	Value
accountIds	Use when the user is at account scope.	false	string []
groupIds	Use when the user is at group scope.	false	string []
siteIds	Use when the user is at site scope.	false	string []

Check if IDR is enabled on endpoint

POST /web/api/v2.1/identity/adservice/api/isIDREnabledOnEndpoint

Check if Incident Detection and Response is enabled on the specified endpoint

Response Messages

200 - Successfully checked IDR status

401 - Unauthorized

403 - Forbidden

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	

Body Schema

Name	Description	Required	Value
filter	Enter exactly one scope based on the user's scope level: use accountIds for account-scoped users, siteIds for site-scoped users, or groupIds for group-scoped users.	false	see Check if IDR is enabled on endpoint - body - filter table
input		false	see Check if IDR is enabled on endpoint - body - input table

Check if IDR is enabled on endpoint - body - filter

Name	Description	Required	Value
accountIds	Use when the user is at account scope.	false	string []
groupIds	Use when the user is at group scope.	false	string []
siteIds	Use when the user is at site scope.	false	string []

Check if IDR is enabled on endpoint - body - input

Name	Description	Required	Value
agentUuid		false	string
requestId		false	string

Get Windows Unified Agents

GET /web/api/v2.1/identity/adservice/api/getWindowsUnifiedAgents

Retrieve Windows unified agents based on filter criteria

Parameters

filterinput	required	Filter input for agents
accountids	optional	List of account IDs separated by comma
requestid	optional	Request ID
siteids	optional	List of site IDs separated by comma

Response Messages

200 - Successfully retrieved Windows Unified Agents

401 - Unauthorized

403 - Forbidden

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	

Get Cloudlink Configurations

GET /web/api/v2.1/identity/adservice/api/getCloudlinkConfigurations

Retrieve all Cloudlink configurations

Parameters

accountids	optional	List of account IDs separated by comma
siteids	optional	List of site IDs separated by comma

Response Messages

200 - Successfully retrieved Cloudlink Configurations

401 - Unauthorized

403 - Forbidden

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	

Identity AD Service - Onboarding

Get onboarding status

GET /web/api/v2.1/identity/adservice/api/getOnboardingStatus

Retrieve the current onboarding status for the AD service

Parameters

accountids	optional	List of account IDs separated by comma
siteids	optional	List of site IDs separated by comma

Response Messages

200 - Successfully retrieved onboarding status

401 - Unauthorized

403 - Forbidden

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	

Identity Policy Service

Get Policy List

GET /web/api/v2.1/identity/identity-policy-service/api/getPolicy

Fetches paginated policy list for a given scope and descendant scopes.

Parameters

limit	required	Number of items per page. Must be 1 or greater.
accountids	optional	Account-level scope. Provide exactly one of: accountIds, sitelds, or groupIds.
apply_on_windows_server	optional	Filter by Windows server deployment.
cursor	optional	Pagination cursor from previous response.
groupids	optional	Group-level scope. Provide exactly one of: accountIds, sitelds, or groupIds.
policytype	optional	Filter by policy type.
query	optional	Free-text search query.
scope	optional	Filter by scope type(s).
siteids	optional	Site-level scope. Provide exactly one of: accountIds, sitelds, or groupIds.
sortby	optional	Field to sort by.
sortorder	optional	Sort direction.
status	optional	Filter by policy status.

Response Messages

200 - Paginated policy list with cursor

401 - Unauthorized

500 - Internal server error

Get Inheritance Status

GET /web/api/v2.1/identity/identity-policy-service/api/getInheritanceStatus

Returns the current policy inheritance status for the authenticated scope

Parameters

accountIds	optional	Account-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.
groupIds	optional	Group-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.
siteIds	optional	Site-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.

Response Messages

200 - Inheritance status

401 - Unauthorized

500 - Internal server error

Response Schema

Name	Description	Required	Value
inheritanceStatus	Current inheritance state of the scope	false	enum
status	Response status of the retrieval	false	enum

Activate Policy

POST /web/api/v2.1/identity/identity-policy-service/api/activatingPolicy

Activates one or more policies for the current scope.

Response Messages

200 - Activation status

400 - Bad request - invalid policy IDs

401 - Unauthorized

500 - Internal server error

Response Schema

Name	Description	Required	Value
status	Result of the operation	false	enum

Body Schema

Name	Description	Required	Value
filter	Enter exactly one scope based on the user's scope level: use accountIds for account-scoped users, siteIds for site-scoped users, or groupIds for group-scoped users.	false	see Activate Policy - body - filter table
input	DTO for activating policies.	false	see Activate Policy - body - input table

Activate Policy - body - filter

Name	Description	Required	Value
accountIds	Use when the user is at account scope.	false	string []
groupIds	Use when the user is at group scope.	false	string []
siteIds	Use when the user is at site scope.	false	string []

Activate Policy - body - input

Name	Description	Required	Value
loggedInUser	Username or ID of the user performing the activation (used for audit trail)	false	string
override	If true, forces activation even when validation warnings exist (e.g. overrides conflict checks)	false	boolean
policyIds	List of policy UUIDs to activate	false	string []

Get Identity Policy Details

GET /web/api/v2.1/identity/identity-policy-service/api/getIdentityPolicyDetails

Returns full details for a specific policy by ID.

Parameters

policyid	required	UUID of the policy
accountids	optional	Account-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.
groupids	optional	Group-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.
siteids	optional	Site-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.

Response Messages

200 - Policy details

400 - Bad request - policyId missing or invalid

401 - Unauthorized

500 - Internal server error

Response Schema

Name	Description	Required	Value
createdBy		false	string
createdTimestamp		false	integer
deployedOnServer		false	boolean
description		false	string
engineConfigurations		false	undefined []
lastModifiedBy		false	string
lastModifiedTimestamp		false	integer
name		false	string
policyId		false	string
policyStatus		false	enum
policyType		false	enum
rootDomainList	Root AD domain list for the policy	false	see Get Identity Policy Details - response - rootDomainList table

Get Identity Policy Details - response - rootDomainList

Name	Description	Required	Value
domains	List of root AD domain names	false	string []

Delete Policies

POST /web/api/v2.1/identity/identity-policy-service/api/deletePolicy

Deletes one or more non-active policies belonging to the current scope.

Response Messages

200 - Deletion result

400 - Bad request - invalid policy IDs

401 - Unauthorized

500 - Internal server error

Body Schema

Name	Description	Required	Value
input		true	see Delete Policies - body - input table
filter	Enter exactly one scope based on the user's scope level: use accountIds for account-scoped users, sitelds for site-scoped users, or groupIds for group-scoped users.	false	see Delete Policies - body - filter table

Delete Policies - body - input

Name	Description	Required	Value
policyIds	List of policy UUIDs to delete	false	string []

Delete Policies - body - filter

Name	Description	Required	Value
accountIds	Use when the user is at account scope.	false	string []
groupIds	Use when the user is at group scope.	false	string []
siteIds	Use when the user is at site scope.	false	string []

Detach Policy Inheritance

POST /web/api/v2.1/identity/identity-policy-service/api/detachInheritance

Breaks the policy inheritance link for the current scope.

Response Messages

200 - Detach inheritance status

401 - Unauthorized

500 - Internal server error

Response Schema

Name	Description	Required	Value
status	Result of the operation	false	enum

Body Schema

Name	Description	Required	Value
input		true	see Detach Policy Inheritance - body - input table
filter	Enter exactly one scope based on the user's scope level: use accountIds for account-scoped users, siteIds for site-scoped users, or groupIds for group-scoped users.	false	see Detach Policy Inheritance - body - filter table

Detach Policy Inheritance - body - input

Name	Description	Required	Value
loggedInUser	Username or ID of the user performing the detach (audit trail)	false	string

Detach Policy Inheritance - body - filter

Name	Description	Required	Value
accountIds	Use when the user is at account scope.	false	string []
groupIds	Use when the user is at group scope.	false	string []
siteIds	Use when the user is at site scope.	false	string []

Revert Policy Inheritance

POST /web/api/v2.1/identity/identity-policy-service/api/revertInheritance

Reverts a previously detached policy inheritance for the current scope.

Response Messages

200 - Revert inheritance status

401 - Unauthorized

500 - Internal server error

Response Schema

Name	Description	Required	Value
status	Result of the operation	false	enum

Body Schema

Name	Description	Required	Value
filter	Enter exactly one scope based on the user's scope level: use accountIds for account-scoped users, siteIds for site-scoped users, or groupIds for group-scoped users.	false	see Revert Policy Inheritance - body - filter table

Revert Policy Inheritance - body - filter

Name	Description	Required	Value
accountIds	Use when the user is at account scope.	false	string []
groupIds	Use when the user is at group scope.	false	string []
siteIds	Use when the user is at site scope.	false	string []

Deactivate Policies

POST /web/api/v2.1/identity/identity-policy-service/api/deactivatingPolicy

Deactivates one or more active policies for the current scope.

Response Messages

200 - Deactivation status

400 - Bad request - invalid policy IDs

401 - Unauthorized

500 - Internal server error

Response Schema

Name	Description	Required	Value
status	Result of the operation	false	enum

Body Schema

Name	Description	Required	Value
input		true	see Deactivate Policies - body - input table
filter	Enter exactly one scope based on the user's scope level: use accountIds for account-scoped users, siteIds for site-scoped users, or groupIds for group-scoped users.	false	see Deactivate Policies - body - filter table

Deactivate Policies - body - input

Name	Description	Required	Value
policyIds	List of policy UUIDs to deactivate	false	string []

Deactivate Policies - body - filter

Name	Description	Required	Value
accountIds	Use when the user is at account scope.	false	string []
groupIds	Use when the user is at group scope.	false	string []
siteIds	Use when the user is at site scope.	false	string []

Get Policy Info for Agent

GET /web/api/v2.1/identity/identity-policy-service/api/policy-info

Returns the active DC and Conditional Access policy configuration for the scope of a given agent UUID.

Parameters

uuid	required	Agent UUID
accountIds	optional	Account-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.
groupIds	optional	Group-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.
siteIds	optional	Site-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.

Response Messages

200 - Policy config info

400 - Bad request - uuid missing

401 - Unauthorized

500 - Internal server error

Response Schema

Name	Description	Required	Value
conditionalAccess	Conditional access configuration string	false	string
connectorName	Name of the connector associated with the policy	false	string
conditionalAccessPolicyId	UUID of the active Conditional Access policy	false	string
conditionalAccessPolicyName	Name of the active Conditional Access policy	false	string
dcPolicyId	UUID of the active DC policy	false	string
dcPolicyName	Name of the active DC policy for the agent's scope	false	string
policyStatus	Status of the DC policy (e.g. ACTIVE, INACTIVE)	false	string

Create Policy

POST /web/api/v2.1/identity/identity-policy-service/api/createPolicy

Creates a new identity policy for the current scope.

Response Messages

200 - Created policy response

400 - Bad request - validation failed (name: 3-30 chars, description: 0-1000 chars)

401 - Unauthorized

500 - Internal server error

Response Schema

Name	Description	Required	Value
message	Human-readable result or error message	false	string
policyId	UUID of the affected policy	false	string
policyName	Name of the affected policy	false	string
policyType	Type of the policy	false	string
status	True if the operation succeeded, false otherwise	false	boolean

Body Schema

Name	Description	Required	Value
filter	Enter exactly one scope based on the user's scope level: use accountIds for account-scoped users, siteIds for site-scoped users, or groupIds for group-scoped users.	false	see Create Policy - body - filter table
input	Policy create/update input.	false	see Create Policy - body - input table

Create Policy - body - filter

Name	Description	Required	Value
accountIds	Use when the user is at account scope.	false	string []
groupIds	Use when the user is at group scope.	false	string []
siteIds	Use when the user is at site scope.	false	string []

Create Policy - body - input

Name	Description	Required	Value
createdBy	Creator username	false	string
createdTimestamp	Creation epoch timestamp in milliseconds	false	integer
deployedOnServer	Whether the policy is deployed on a server endpoint.	false	boolean
description	Policy description. Max 1000 characters.	false	string
ednInstanceId	EDN instance ID	false	string
engineConfigurationInput	List of engine configurations for the policy.	false	undefined []
lastModifiedBy	Last modifier username	false	string
lastModifiedTimestamp	Last modification epoch timestamp in milliseconds	false	integer
loggedInUser	Username or ID of the logged-in user.	false	string
mgmtId	Management console ID	false	string
name	Policy name. Min 3, max 30 characters.	false	string
policyId	Policy UUID. Required for update.	false	string
policyStatus	Policy status	false	enum
policyType	Type of policy.	false	enum
rootDomainList	Root AD domain list for the policy	false	see Create Policy - body - rootDomainList table

scopeId	Scope ID	false	string
scopeLevel	Scope level	false	enum
tenantId	Tenant ID	false	string

Create Policy - body - rootDomainList

Name	Description	Required	Value
domains	List of root AD domain names	false	string []

Update Policy

POST /web/api/v2.1/identity/identity-policy-service/api/updatePolicy

Updates an existing identity policy.

Response Messages

200 - Updated policy response

401 - Unauthorized

500 - Internal server error

Response Schema

Name	Description	Required	Value
message	Human-readable result or error message	false	string
policyId	UUID of the affected policy	false	string
policyName	Name of the affected policy	false	string
policyType	Type of the policy	false	string
status	True if the operation succeeded, false otherwise	false	boolean

Body Schema

Name	Description	Required	Value
filter	Enter exactly one scope based on the user's scope level: use accountIds for account-scoped users, siteIds for site-scoped users, or groupIds for group-scoped users.	false	see Update Policy - body - filter table
input	Policy create/update input.	false	see Update Policy - body - input table

Update Policy - body - filter

Name	Description	Required	Value
accountIds	Use when the user is at account scope.	false	string []
groupIds	Use when the user is at group scope.	false	string []
siteIds	Use when the user is at site scope.	false	string []

Update Policy - body - input

Name	Description	Required	Value
createdBy	Creator username	false	string
createdTimestamp	Creation epoch timestamp in milliseconds	false	integer
deployedOnServer	Whether the policy is deployed on a server endpoint.	false	boolean
description	Policy description. Max 1000 characters.	false	string
ednInstanceId	EDN instance ID	false	string
engineConfigurationInput	List of engine configurations for the policy.	false	undefined []
lastModifiedBy	Last modifier username	false	string
lastModifiedTimestamp	Last modification epoch timestamp in milliseconds	false	integer
loggedInUser	Username or ID of the logged-in user.	false	string
mgmtId	Management console ID	false	string
name	Policy name. Min 3, max 30 characters.	false	string
policyId	Policy UUID. Required for update.	false	string
policyStatus	Policy status	false	enum
policyType	Type of policy.	false	enum
rootDomainList	Root AD domain list for the policy	false	see Update Policy - body - rootDomainList table

scopeId	Scope ID	false	string
scopeLevel	Scope level	false	enum
tenantId	Tenant ID	false	string

Update Policy - body - rootDomainList

Name	Description	Required	Value
domains	List of root AD domain names	false	string []

Duplicate Policy

POST /web/api/v2.1/identity/identity-policy-service/api/duplicatePolicy

Creates a copy of an existing identity policy with a new name.

Response Messages

200 - Duplicated policy response

401 - Unauthorized

500 - Internal server error

Response Schema

Name	Description	Required	Value
message	Human-readable result or error message	false	string
policyId	UUID of the affected policy	false	string
policyName	Name of the affected policy	false	string
policyType	Type of the policy	false	string
status	True if the operation succeeded, false otherwise	false	boolean

Body Schema

Name	Description	Required	Value
filter	Enter exactly one scope based on the user's scope level: use accountIds for account-scoped users, siteIds for site-scoped users, or groupIds for group-scoped users.	false	see Duplicate Policy - body - filter table
input	Parameters for duplicating a policy	false	see Duplicate Policy - body - input table

Duplicate Policy - body - filter

Name	Description	Required	Value
accountIds	Use when the user is at account scope.	false	string []
groupIds	Use when the user is at group scope.	false	string []
siteIds	Use when the user is at site scope.	false	string []

Duplicate Policy - body - input

Name	Description	Required	Value
name	Name for the new duplicated policy	true	string
policyId	UUID of the policy to duplicate	true	string

Identity Policy Service - AD EP Data

Get Privileged Admins

GET /web/api/v2.1/identity/identity-policy-service/api/adPrivilegeAdmins

Returns the list of privileged admin AD objects for the given domains.

Parameters

domains	required	List of AD domain names
accountIds	optional	Account-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.
groupIds	optional	Group-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.
siteIds	optional	Site-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.

Response Messages

200 - List of privileged admin AD objects

401 - Unauthorized

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	undefined []

Get Service Accounts

GET /web/api/v2.1/identity/identity-policy-service/api/adServiceAccounts

Returns the list of service account AD objects for the given domains.

Parameters

domains	required	List of AD domain names
accountids	optional	Account-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.
groupids	optional	Group-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.
siteids	optional	Site-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.

Response Messages

200 - List of service account AD objects

401 - Unauthorized

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	undefined []

Get Domain Controllers

GET /web/api/v2.1/identity/identity-policy-service/api/adDomainControllers

Returns the list of domain controller objects for the given domains.

Parameters

domains	required	List of AD domain names
accountids	optional	Account-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.
groupids	optional	Group-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.
siteids	optional	Site-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.

Response Messages

200 - List of domain controller objects

401 - Unauthorized

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	undefined []

Get Delegated Admins

GET /web/api/v2.1/identity/identity-policy-service/api/adDelegatedAdmins

Returns the list of delegated admin objects for the given domains.

Parameters

domains	required	List of AD domain names
accountids	optional	Account-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.
groupids	optional	Group-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.
siteids	optional	Site-level scope. Provide exactly one of: accountIds, siteIds, or groupIds.

Response Messages

200 - List of delegated admin objects

401 - Unauthorized

500 - Internal server error

Response Schema

Name	Description	Required	Value
data		false	undefined []

Inventory

Categories and counts

GET /web/api/v2.1/xdr/assets/categories

Get inventory categories and their asset counts

Parameters

accountids	optional	List of Account IDs to filter by
groupids	optional	List of Group IDs to filter by
siteids	optional	List of Site IDs to filter by

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data		false	see Categories and counts - response - data table
errors	Errors	false	array

Categories and counts - response - data

Name	Description	Required	Value
account	Account	false	integer
container	Container	false	integer
device	Device	false	integer
identity	Identity	false	integer
inventory	Inventory	false	integer
server	Server	false	integer
storage	Storage	false	integer
workstation	Workstation	false	integer

Counts per subcategory for categories

GET /web/api/v2.1/xdr/assets/sub-categories

Get asset counts per subcategory for each category

Parameters

accountids	optional	List of Account IDs to filter by
groupids	optional	List of Group IDs to filter by
siteids	optional	List of Site IDs to filter by

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
------	-------------	----------	-------

data		false	see Counts per subcategory for categories - response - data table
errors	Errors	false	array

Export Cloud Tags to CSV or JSON

GET /web/api/v2.1/xdr/assets/cloud-tags/export

Returns the tags for given id in a CSV or JSON format

Parameters

exportformat	required	Export format
accountids	optional	List of Account IDs to filter by
groupids	optional	List of Group IDs to filter by
id	optional	List of resource ids to filter by
siteids	optional	List of Site IDs to filter by

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Assets

GET /web/api/v2.1/xdr/assets

Get assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
agentagentversion	optional	The agent version
agentantitamperingstatus	optional	The agent anti tampering status
agentconsoleconnectivity	optional	The agent console connectivity
agentidrconnectivity	optional	The agent idr connectivity
agentoperationalstate	optional	The agent operational state
agentpendingactions	optional	The agent pending actions
agentvssrollbackstatus	optional	The agent VSS rollback status

alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
category	optional	The category that each resource belongs to
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization

cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items (1-1000)

missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
osfamily	optional	The operating system family of the device
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists

tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Export assets to CSV or JSON

GET /web/api/v2.1/xdr/assets/export

Returns the results for given inventory filter in a CSV or JSON format

Parameters

exportformat	required	Export format
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
agentagentversion	optional	The agent version
agentantitamperingstatus	optional	The agent anti tampering status
agentconsoleconnectivity	optional	The agent console connectivity
agentidrconnectivity	optional	The agent idr connectivity
agentoperationalstate	optional	The agent operational state
agentpendingactions	optional	The agent pending actions
agentvssrollbackstatus	optional	The agent VSS rollback status
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset

assetstatus__nin	optional	The status of the asset (not in)
category	optional	The category that each resource belongs to
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countonly	optional	If true, only total number of items will be returned, without any of

		the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
eppunsupportedunkn own	optional	The agent supported or unknown state
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
osfamily	optional	The operating system family of the device
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contain s	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset

n		
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Perform action

POST /web/api/v2.1/xdr/assets/action

Perform action on selected assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
agentagentversion	optional	The agent version
agentantitamperingstatus	optional	The agent anti tampering status
agentconsoleconnectivity	optional	The agent console connectivity
agentidrconnectivity	optional	The agent idr connectivity
agentoperationalstate	optional	The agent operational state
agentpendingactions	optional	The agent pending actions
agentvssrollbackstatus	optional	The agent VSS rollback status
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)

assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
category	optional	The category that each resource belongs to
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)

countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)

tagsKeyValue	Tags	false	string []
tagsKeyValue__contains	Free-text filter by tag key value (supports multiple values)	false	string []
tagsKeyValue__nin	Tags (not in)	false	string []

Perform action

POST /web/api/v2.1/xdr/assets/ai-ml/action

Perform action on selected assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)

alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID

ains		
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type

resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Inventory Account

Assets

GET /web/api/v2.1/xdr/assets/account

Get assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)

assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)

cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type

resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Auto Complete

GET /web/api/v2.1/xdr/assets/account/filters/autocomplete

Use this command to get values for other fields. When you send this command with input text and a field name, it returns auto-complete suggestions for the field.

Parameters

key	required	Search field key
text	required	Search term text
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id

cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by

id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists

tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Inventory Application Integration

Assets

GET /web/api/v2.1/xdr/assets/application-integration

Get assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)

assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)

cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type

resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Inventory Application Integration Filters

Filter counts

GET /web/api/v2.1/xdr/assets/application-integration/filters/count

Get filter counts

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)

cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review

devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)

tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Inventory Cloud Application

Assets

GET /web/api/v2.1/xdr/assets/cloud-application

Get assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)

assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)

cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type

resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid	optional	The cloud provider account ID

d__contains		
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.

devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.

sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Inventory Cloud Surface

Assets

GET /web/api/v2.1/xdr/assets/surface/cloud

Get Cloud assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email

assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contain	optional	Free-text filter by cloud tag key (supports multiple values)

s		
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
encryptiontype	optional	The encryption type
encryptiontype__nin	optional	The encryption type (not in)
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name

infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isrogues	optional	Whether the instance is a rogue or not
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8sdeploymentstrategy__contains	optional	Deployment Strategy
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name
k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8spolicytype__contains	optional	Policy Type

k8sresourceid	optional	The Kubernetes Resource ID
k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8sservicename__contains	optional	Service Name
k8sservicetype__contains	optional	Service Type
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8supdatestrategy__contains	optional	Update Strategy
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
limit	optional	Limit number of returned items (1-1000)
macaddresses__contains	optional	The MAC addresses
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networksecuritygroups__contains	optional	The network security group
objectcount	optional	The number of objects in the bucket
objectcount__nin	optional	The number of objects in the bucket (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)

osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
scanstatus	optional	The CDS malware scan status
scanstatus__contains	optional	The CDS malware scan status
scanstatus__nin	optional	The CDS malware scan status (not in)
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
state	optional	The state of the instance

state__contains	optional	The state
state__nin	optional	The state of the instance (not in)
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnetid__contains	optional	The subnet ID
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
threatdetectionpolicystatus	optional	Threat Detection Policy
threatdetectionstatus	optional	Threat Detection Status
threatdetectionstatus__contains	optional	The threat detection status
threatdetectionstatus__nin	optional	Threat Detection Status (not in)
virtualnetworkid__contains	optional	The virtual network ID

Export assets to CSV or JSON

GET /web/api/v2.1/xdr/assets/surface/cloud/export

Returns the results for given inventory filter in a CSV or JSON format

Parameters

exportformat	required	Export format
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__ni	optional	Asset Contact Email (not in)

n		
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)

cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
encryptiontype	optional	The encryption type
encryptiontype__nin	optional	The encryption type (not in)
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset

infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isrogues	optional	Whether the instance is a rogue or not
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8sdeploymentstrategy__contains	optional	Deployment Strategy
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name
k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8spolicytype__contains	optional	Policy Type
k8sresourceid	optional	The Kubernetes Resource ID

k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8sservicename__contains	optional	Service Name
k8sservicetype__contains	optional	Service Type
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8supdatestrategy__contains	optional	Update Strategy
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
limit	optional	Limit number of returned items (1-1000)
macaddresses__contains	optional	The MAC addresses
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networksecuritygroups__contains	optional	The network security group
objectcount	optional	The number of objects in the bucket
objectcount__nin	optional	The number of objects in the bucket (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device

osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
scanstatus	optional	The CDS malware scan status
scanstatus__contains	optional	The CDS malware scan status
scanstatus__nin	optional	The CDS malware scan status (not in)
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
state	optional	The state of the instance
state__contains	optional	The state

state__nin	optional	The state of the instance (not in)
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnetid__contains	optional	The subnet ID
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
threatdetectionpolicystatus	optional	Threat Detection Policy
threatdetectionstatus	optional	Threat Detection Status
threatdetectionstatus__contains	optional	The threat detection status
threatdetectionstatus__nin	optional	Threat Detection Status (not in)
virtualnetworkid__contains	optional	The virtual network ID

Perform action

POST /web/api/v2.1/xdr/assets/surface/cloud/action

Perform action on selected assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id

cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review

devicereview__nin	optional	The asset review (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
encryptiontype	optional	The encryption type
encryptiontype__nin	optional	The encryption type (not in)
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role

Inventory Cloud Surface Filters

Filter counts

GET /web/api/v2.1/xdr/assets/surface/cloud/filters/count

Get filter counts

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)

assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
corecount	optional	The number of cores

corecount__nin	optional	The number of cores (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
encryptiontype	optional	The encryption type
encryptiontype__nin	optional	The encryption type (not in)
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isrogues	optional	Whether the instance is a rogue or not
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunified	optional	Free-text filter by Kubernetes Annotations key value (supports

keyvalue__contains		multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8sdeploymentstrategy__contains	optional	Deployment Strategy
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name
k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8spolicytype__contains	optional	Policy Type
k8sresourceid	optional	The Kubernetes Resource ID
k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8sservicename__contains	optional	Service Name
k8sservicetype__contains	optional	Service Type
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)

k8supdatestrategy__contains	optional	Update Strategy
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
macaddresses__contains	optional	The MAC addresses
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networksecuritygroups__contains	optional	The network security group
objectcount	optional	The number of objects in the bucket
objectcount__nin	optional	The number of objects in the bucket (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)

resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
scanstatus	optional	The CDS malware scan status
scanstatus__contains	optional	The CDS malware scan status
scanstatus__nin	optional	The CDS malware scan status (not in)
siteids	optional	List of Site IDs to filter by
state	optional	The state of the instance
state__contains	optional	The state
state__nin	optional	The state of the instance (not in)
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnetid__contains	optional	The subnet ID
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
threatdetectionpolicys	optional	Threat Detection Policy

tatus		
threatdetectionstatus	optional	Threat Detection Status
threatdetectionstatus_ _contains	optional	The threat detection status
threatdetectionstatus_ _nin	optional	Threat Detection Status (not in)
virtualnetworkid__con tains	optional	The virtual network ID

Auto Complete

GET /web/api/v2.1/xdr/assets/surface/cloud/filters/autocomplete

Use this command to get values for other fields. When you send this command with input text and a field name, it returns auto-complete suggestions for the field.

Parameters

key	required	Search field key
text	required	Search term text
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset

assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)

countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
encryptiontype	optional	The encryption type
encryptiontype__nin	optional	The encryption type (not in)
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isrogues	optional	Whether the instance is a rogue or not
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)

k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8sdeploymentstrategy__contains	optional	Deployment Strategy
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name
k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8spolicytype__contains	optional	Policy Type
k8sresourceid	optional	The Kubernetes Resource ID
k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8sservicename__contains	optional	Service Name
k8sservicetype__contains	optional	Service Type
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8supdatestrategy__contains	optional	Update Strategy

k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
limit	optional	Limit number of returned items
macaddresses__contains	optional	The MAC addresses
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networksecuritygroups__contains	optional	The network security group
objectcount	optional	The number of objects in the bucket
objectcount__nin	optional	The number of objects in the bucket (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type

resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
scanstatus	optional	The CDS malware scan status
scanstatus__contains	optional	The CDS malware scan status
scanstatus__nin	optional	The CDS malware scan status (not in)
siteids	optional	List of Site IDs to filter by
state	optional	The state of the instance
state__contains	optional	The state
state__nin	optional	The state of the instance (not in)
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnetid__contains	optional	The subnet ID
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
threatdetectionpolicystatus	optional	Threat Detection Policy

threatdetectionstatus	optional	Threat Detection Status
threatdetectionstatus_ _contains	optional	The threat detection status
threatdetectionstatus_ _nin	optional	Threat Detection Status (not in)
virtualnetworkid__con tains	optional	The virtual network ID

Inventory Container

Assets

GET /web/api/v2.1/xdr/assets/container

Get assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine

agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)
agentcustomeridentifier__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfreepercentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolumetype	optional	The agent disk metrics volume type
agentdiskmetricsvolumetype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylastupdateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)

agentidrconnectivity	optional	The agent ldr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)
agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID

agentsubscribeondt__between	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionstatus	optional	The agent VSS protection status
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffareafreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__ni	optional	Asset Contact Email (not in)

n		
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)

cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups

identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID

k8sdeploymentstrategy	optional	Deployment Strategy
k8sdeploymentstrategy__contains	optional	Deployment Strategy
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name
k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8spolicytype	optional	Policy Type
k8spolicytype__contains	optional	Policy Type
k8sresourceid	optional	The Kubernetes Resource ID
k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8sservicename	optional	Service Name
k8sservicename__contains	optional	Service Name
k8sservicetype	optional	Service Type
k8sservicetype__contains	optional	Service Type
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8supdatestrategy	optional	Update Strategy
k8supdatestrategy__contains	optional	Update Strategy

contains		
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
lastactivedt__between	optional	The last active date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
limit	optional	Limit number of returned items (1-1000)
macaddresses__contains	optional	The MAC addresses
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networksecuritygroups__contains	optional	The network security group
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)

region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnetid__contains	optional	The subnet ID
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists

tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
virtualnetworkid__contains	optional	The virtual network ID

agentCustomerIdIdentifier__contains	The customer identifier	false	string []
agentDecommissioned	Whether the agent is decommissioned	false	boolean []
agentDiskEncryption	The agent disk encryption	false	boolean []
agentDiskMetricsFreePercentage__between	The agent free disk percentage on any of the disks	false	string
agentDiskMetricsFreePercentage__gte	The agent free disk percentage on any of the disks	false	number

agentDiskMetricsFreePercentage__lte	The agent free disk percentage on any of the disks	false	number
agentDiskMetricsVolumeType	The agent disk metrics volume type	false	string []
agentDiskMetricsVolumeType__nin	The agent disk metrics volume type (not in)	false	string []
agentDvConnectivity	The connection status between the agent and the SDL service	false	string []
agentDvConnectivity__nin	The connection status between the agent and the SDL service (not in)	false	string []
agentDvConnectivityLastUpdatedDt__between	The SDL connectivity last active	false	string
agentFullDiskScanDt__between	The agent full disk scan date	false	string
agentHasLocalConfig	Whether the agent has local configuration	false	boolean []
agentHealthStatus	The agent health status	false	string []
agentHealthStatus__nin	The agent health status (not in)	false	string []
agentIldrConnectivity	The agent Ildr connectivity	false	boolean []
agentInstallerType	The agent installer type	false	string []
agentInstallerType__nin	The agent installer type (not in)	false	string []
agentLastLoggedInUser__contains	The last logged in user	false	string []
agentLocation	The agent location	false	string []
agentLocation__nin	The agent location (not in)	false	string []
agentLocationAwareness__contains	The location awareness	false	string []
agentMissingPermissions	The agent missing permissions	false	string []
agentMissingPermissions__nin	The agent missing permissions (not in)	false	string []
agentNetworkStatus	The agent network status	false	string []
agentNetworkStatus__nin	The agent network status (not in)	false	string []
agentOperationalState	The agent operational state	false	string []
agentOperationalState__nin	The agent operational state (not in)	false	string []
agentPendingActions	The agent pending actions	false	string []
agentPendingActions__nin	The agent pending actions (not in)	false	string []
agentPendingUninstall	Whether the agent is pending uninstall	false	boolean []
agentPendingUpgrade	Whether the agent is pending upgrade	false	boolean []

agentRangerStatus	The agent network scanner status	false	string []
agentRangerStatus__nin	The agent network scanner status (not in)	false	string []
agentRangerVersion	The agent network scanner version	false	string []
agentRangerVersion__nin	The agent network scanner version (not in)	false	string []
agentS1AgentLiveUpdatesVersion__contains	Live update ID	false	string []
agentSubscribeOnDt__between	The agent subscribe time	false	string
agentUninstalled	Whether the agent is uninstalled	false	boolean []
agentUuid	Match by the agent UUID	false	string []
agentUuid__contains	The UUID	false	string []
agentVssLastSnapshotDt__between	The agent VSS last snapshot date	false	string
agentVssProtectionStatus	The agent VSS protection status	false	string []
agentVssProtectionStatus__nin	The agent VSS protection status (not in)	false	string []
agentVssRollbackStatus	The agent VSS rollback status	false	string []
agentVssRollbackStatus__nin	The agent VSS rollback status (not in)	false	string []
agentVssServiceStatus	The agent VSS service status	false	string []
agentVssServiceStatus__nin	The agent VSS service status (not in)	false	string []
agentVssVolumesDiffAreaFreePercentage__between	The agent free VSS volume percentage on any of the volumes	false	string
alertSeverity	The severity of the alert	false	string []
allTagsKey	User and cloud tag keys	false	string []
allTagsKey__exists	User and cloud tag keys exists	false	string []
allTagsKey__nexists	User and cloud tag keys not exists	false	string []
allTagsKey__nin	User and cloud tag keys (not in)	false	string []
allTagsKeyValue	User and cloud tags	false	string []
allTagsKeyValue__nin	User and cloud tags (not in)	false	string []
applicationName	The name of the application installed on a workstation or a server	false	string []
architecture	The architecture of the device	false	string []
architecture__nin	The architecture of the device (not in)	false	string []
assetContactEmail	Asset Contact Email	false	string []

assetContactEmail__nin	Asset Contact Email (not in)	false	string []
assetCriticality	The criticality that each asset belongs to	false	string []
assetCriticality__nin	The criticality that each asset belongs to (not in)	false	string []
assetEnvironment	The environment that the asset exists in - AWS Azure GCP Active Directory	false	string []
assetEnvironment__nin	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)	false	string []
assetStatus	The status of the asset	false	string []
assetStatus__nin	The status of the asset (not in)	false	string []
cloudProviderAccountId	The cloud provider account id	false	string []
cloudProviderAccountId__contains	The cloud provider account ID	false	string []
cloudProviderAccountId__nin	The cloud provider account id (not in)	false	string []
cloudProviderAccountName	The cloud provider account name	false	string []
cloudProviderAccountName__contains	The cloud provider account name	false	string []
cloudProviderAccountName__nin	The cloud provider account name (not in)	false	string []
cloudProviderOrganization__contains	The cloud provider organization	false	string []
cloudProviderOrganizationUnit__contains	The cloud provider organization unit	false	string []
cloudProviderProjectId__contains	The cloud provider project ID	false	string []
cloudProviderSubscriptionId__contains	The cloud provider subscription ID	false	string []
cloudResourceId__contains	The cloud resource ID	false	string []
cloudTagsKey	The cloud tags key	false	string []
cloudTagsKey__contains	Free-text filter by cloud tag key (supports multiple values)	false	string []
cloudTagsKey__nin	The cloud tags key (not in)	false	string []
cloudTagsKeyValue	The cloud tags key value	false	string []
cloudTagsKeyValue__contains	Free-text filter by cloud tag key value (supports multiple values)	false	string []
cloudTagsKeyValue__nin	The cloud tags key value (not in)	false	string []

coreCount	The number of cores	false	integer []
coreCount__nin	The number of cores (not in)	false	integer []
countOnly	If true, only total number of items will be returned, without any of the actual objects.	false	boolean
countsFor	The columns for which filter count would be returned for	false	string []
cpu__contains	The CPU	false	string []
csvFilterId	The ID of the CSV file to filter by	false	integer
cursor	Cursor position returned by the last request. Use to iterate over more than 1000 items.	false	string
deviceReview	The asset review	false	string []
deviceReview__nin	The asset review (not in)	false	string []
domain	The domain of the device	false	string []
domain__contains	The domain	false	string []
domain__nin	The domain of the device (not in)	false	string []
firstSeenDt__between	The first seen date	false	string
gatewayIps__contains	The gateway IPs	false	string []
gatewayMacs__contains	The gateway MACs	false	string []
groupIds	List of Group IDs to filter by	false	string []
hostnames__contains	The hostnames	false	string []
id__contains	The ID	false	string []
id__in	The ID	false	string []
identityAd__contains	Any AD string	false	string []
identityAdMachine__contains	AD machine or its groups	false	string []
identityAdMachineDistinguishedName__contains	AD machine DN	false	string []
identityAdMachineMembership__contains	AD machine groups	false	string []
identityAdUser__contains	AD user or their groups	false	string []
identityAdUserDistinguishedName__contains	AD user DN	false	string []
identityAdUserMembership__contains	AD user groups	false	string []

imageId__contains	The image ID	false	string []
imageName__contains	Free-text filter by the image name	false	string []
infectionStatus	The status alerts of the asset	false	string []
infectionStatus__nin	The status alerts of the asset (not in)	false	string []
instanceId__contains	The instance ID	false	string []
instanceRole__contains	The instance role	false	string []
instanceType__contains	The instance type	false	string []
internalIps__contains	The internal IPs	false	string []
ipAddress__contains	The IP addresses	false	string []
isAdConnector	Is AD Connector	false	boolean []
isDcServer	Is DC Server	false	boolean []
k8sAnnotationsUnifiedKey__contains	Free-text filter by Kubernetes Annotations key (supports multiple values)	false	string []
k8sAnnotationsUnifiedKeyValue__contains	Free-text filter by Kubernetes Annotations key value (supports multiple values)	false	string []
k8sCluster	The Kubernetes Cluster	false	string []
k8sCluster__contains	The Kubernetes cluster	false	string []
k8sCluster__nin	The Kubernetes Cluster (not in)	false	string []
k8sClusterId	The Kubernetes Cluster ID	false	string []
k8sClusterId__contains	Kubernetes Cluster ID	false	string []
k8sDeploymentStrategy	Deployment Strategy	false	string []
k8sDeploymentStrategy__contains	Deployment Strategy	false	string []
k8sLabelsUnifiedKey__contains	Free-text filter by Kubernetes Labels key (supports multiple values)	false	string []
k8sLabelsUnifiedKeyValue__contains	Free-text filter by Kubernetes Labels key value (supports multiple values)	false	string []
k8sNamespace	The Kubernetes Namespace Name	false	string []
k8sNamespace__contains	Namespace Name	false	string []
k8sNode	The Kubernetes Node	false	string []
k8sNode__contains	The Kubernetes node	false	string []
k8sNode__nin	The Kubernetes Node (not in)	false	string []
k8sPolicyType	Policy Type	false	see Assets using POST - body - k8sPolicyType table

k8sPolicyType__contains	Policy Type	false	string []
k8sResourceId	The Kubernetes Resource ID	false	string []
k8sResourceId__contains	Kubernetes Resource ID	false	string []
k8sRunningOnNodes	Running on Nodes	false	string []
k8sRunningOnNodes__contains	Running on nodes	false	see Assets using POST - body - k8sRunningOnNodes__contains table
k8sServiceName	Service Name	false	string []
k8sServiceName__contains	Service Name	false	string []
k8sServiceType	Service Type	false	string []
k8sServiceType__contains	Service Type	false	string []
k8sType	The Kubernetes Type	false	string []
k8sType__nin	The Kubernetes Type (not in)	false	string []
k8sUpdateStrategy	Update Strategy	false	string []
k8sUpdateStrategy__contains	Update Strategy	false	string []
k8sVersion	The Kubernetes Version	false	string []
k8sVersion__nin	The Kubernetes Version (not in)	false	string []
lastActiveDt__between	The last active date	false	string
legacy_identity_policy_name__contains	The legacy identity policy name	false	string []
legacyIdentityPolicyName	Legacy Identity Policy Name	false	string []
limit	Limit number of returned items (1-1000)	false	integer
macAddresses__contains	The MAC addresses	false	string []
memoryReadable	The memory of the device in human readable format	false	string []
memoryReadable__nin	The memory of the device in human readable format (not in)	false	string []
missingCoverage	The missing coverage for the asset	false	string []
missingCoverage__nin	The missing coverage for the asset (not in)	false	string []
name__contains	The name	false	string []
names	Name	false	string []
names__nin	Name (not in)	false	string []
networkSecurityGroups__contains	The network security group	false	string []
os	The operating system of the device	false	string []

os__nin	The operating system of the device (not in)	false	string []
osFamily	The operating system family of the device	false	string []
osFamily__nin	The operating system family of the device (not in)	false	string []
osNameVersion	The operating system name and version of the device	false	string []
osNameVersion__contains	The OS names and versions	false	string []
osNameVersion__nin	The operating system name and version of the device (not in)	false	string []
osVersion	The operating system version of the device	false	string []
osVersion__contains	The OS versions	false	string []
osVersion__nin	The operating system version of the device (not in)	false	string []
region	The region	false	string []
region__contains	The geographical area where cloud resources are hosted	false	string []
region__nin	The region (not in)	false	string []
resourceType	The canonical name for the resource type	false	string []
resourceType__contains	The Asset Type	false	string []
resourceType__nin	The canonical name for the resource type (not in)	false	string []
riskFactors	The risk factors associated with the asset	false	string []
riskFactors__nin	The risk factors associated with the asset (not in)	false	string []
s1UpdatedAt__between	The Last Seen date and time for the asset	false	string
serialNumber	The serial number	false	string []
serialNumber__contains	The serial number	false	string []
serialNumber__nin	The serial number (not in)	false	string []
sitelds	List of Site IDs to filter by	false	string []
skip	Skip first number of items (0-1000).	false	integer

	To iterate over more than 1000 items, use "cursor".		
skipCount	If true, total number of items will not be calculated, which speeds up execution time.	false	boolean
sortBy	The column to sort the results by.	false	enum
sortOrder	Sort direction	false	enum
subCategory	The sub-category that each resource belongs to	false	string []
subCategory__nin	The sub-category that each resource belongs to (not in)	false	string []
subnetId__contains	The subnet ID	false	string []
subnets__contains	The subnets	false	string []
surfaces	The Surface that each asset belongs to	false	string []
surfaces__nin	The Surface that each asset belongs to (not in)	false	string []
tagsKey	Tag Keys	false	string []
tagsKey__contains	Free-text filter by tag key (supports multiple values)	false	string []
tagsKey__exists	Tag Keys exists	false	string []
tagsKey__nexists	Tag Keys not exists	false	string []
tagsKey__nin	Tag Keys (not in)	false	string []
tagsKeyValue	Tags	false	string []
tagsKeyValue__contains	Free-text filter by tag key value (supports multiple values)	false	string []
tagsKeyValue__nin	Tags (not in)	false	string []
virtualNetworkId__contains	The virtual network ID	false	string []

Assets using POST - body - k8sPolicyType

Name	Description	Required	Value
		false	string []

Assets using POST - body - k8sRunningOnNodes__contains

Name	Description	Required	Value
		false	string []

Perform action

POST /web/api/v2.1/xdr/assets/container/action

Perform action on selected assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigration	optional	The agent console migration status (not in)

status__nin		
agentcustomeridentifier__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfreepercentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolumetype	optional	The agent disk metrics volume type
agentdiskmetricsvolumetype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylastupdateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent Idr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user

agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)
agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentsubscribeondbetween	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshot	optional	The agent VSS last snapshot date

dt__between		
agentvssprotectionstatus	optional	The agent VSS protection status
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffareafreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP

n		Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)

corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups
identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups

imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8sdeploymentstrategy	optional	Deployment Strategy
k8sdeploymentstrategy__contains	optional	Deployment Strategy
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name

k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8spolicytype	optional	Policy Type
k8spolicytype__contains	optional	Policy Type
k8sresourceid	optional	The Kubernetes Resource ID
k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8sservicename	optional	Service Name
k8sservicename__contains	optional	Service Name
k8sservicetype	optional	Service Type
k8sservicetype__contains	optional	Service Type
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8supdatestrategy	optional	Update Strategy
k8supdatestrategy__contains	optional	Update Strategy
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
lastactivedt__between	optional	The last active date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
macaddresses__contains	optional	The MAC addresses

memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networksecuritygroups__contains	optional	The network security group
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset

serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnetid__contains	optional	The subnet ID
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
virtualnetworkid__contains	optional	The virtual network ID

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Body Schema

Name	Description	Required	Value
------	-------------	----------	-------

actionName	Action name	true	enum
id__in	List of selected inventory ids	false	string []
id__nin	List of inventory ids to exclude from select_all	false	string []

Export assets to CSV or JSON

GET /web/api/v2.1/xdr/assets/container/export

Returns the results for given inventory filter in a CSV or JSON format

Parameters

exportformat	required	Export format
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)
agentcustomeridentifier__contains	optional	The customer identifier

agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfree percentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfree percentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfree percentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolume type	optional	The agent disk metrics volume type
agentdiskmetricsvolume type__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylast updateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent Idr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)
agentlocationawareness__contains	optional	The location awareness

agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentsubscribeondbetween	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionstatus	optional	The agent VSS protection status
agentvssprotectionstatus	optional	The agent VSS protection status (not in)

tus__nin		
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffareafreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id

d		
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.

countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups
identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups

imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8sdeploymentstrategy	optional	Deployment Strategy
k8sdeploymentstrategy__contains	optional	Deployment Strategy
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name

k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8spolicytype	optional	Policy Type
k8spolicytype__contains	optional	Policy Type
k8sresourceid	optional	The Kubernetes Resource ID
k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8sservicename	optional	Service Name
k8sservicename__contains	optional	Service Name
k8sservicetype	optional	Service Type
k8sservicetype__contains	optional	Service Type
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8supdatestrategy	optional	Update Strategy
k8supdatestrategy__contains	optional	Update Strategy
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
lastactivedt__between	optional	The last active date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
limit	optional	Limit number of returned items (1-1000)
macaddresses__contains	optional	The MAC addresses

ns		
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networksecuritygroups__contains	optional	The network security group
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset

n		
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnetid__contains	optional	The subnet ID
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
virtualnetworkid__contains	optional	The virtual network ID

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

Get available actions

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigration	optional	The agent console migration status (not in)

status__nin		
agentcustomeridentifier__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfreepercentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolumetype	optional	The agent disk metrics volume type
agentdiskmetricsvolumetype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylastupdateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent Idr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user

agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)
agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentsubscribeondbetween	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshot	optional	The agent VSS last snapshot date

dt__between		
agentvssprotectionstatus	optional	The agent VSS protection status
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffareafreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP

n		Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)

corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups
identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups

imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcservers	optional	Is DC Server
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8sdeploymentstrategy	optional	Deployment Strategy
k8sdeploymentstrategy__contains	optional	Deployment Strategy
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name

k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8spolicytype	optional	Policy Type
k8spolicytype__contains	optional	Policy Type
k8sresourceid	optional	The Kubernetes Resource ID
k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8sservicename	optional	Service Name
k8sservicename__contains	optional	Service Name
k8sservicetype	optional	Service Type
k8sservicetype__contains	optional	Service Type
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8supdatestrategy	optional	Update Strategy
k8supdatestrategy__contains	optional	Update Strategy
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
lastactivedt__between	optional	The last active date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
macaddresses__contains	optional	The MAC addresses

memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)

agentcustomeridentifier__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfreepercentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolumetype	optional	The agent disk metrics volume type
agentdiskmetricsvolumetype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
