agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylastupdateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent Idr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)

agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentssubscribeondt__between	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionsta	optional	The agent VSS protection status

tus		
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdifferfreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset

assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)

countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups
identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name

infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8sdeploymentstrategy	optional	Deployment Strategy
k8sdeploymentstrategy__contains	optional	Deployment Strategy
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name
k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node

k8snode__nin	optional	The Kubernetes Node (not in)
k8spolicytype	optional	Policy Type
k8spolicytype__contains	optional	Policy Type
k8sresourceid	optional	The Kubernetes Resource ID
k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8sservicename	optional	Service Name
k8sservicename__contains	optional	Service Name
k8sservicetype	optional	Service Type
k8sservicetype__contains	optional	Service Type
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8supdatestrategy	optional	Update Strategy
k8supdatestrategy__contains	optional	Update Strategy
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
lastactivedt__between	optional	The last active date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
macaddresses__contains	optional	The MAC addresses
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)

missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networksecuritygroups__contains	optional	The network security group
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number

s		
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnetid__contains	optional	The subnet ID
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
virtualnetworkid__contains	optional	The virtual network ID

Auto Complete

GET /web/api/v2.1/xdr/assets/container/filters/autocomplete

Use this command to get values for other fields. When you send this command with input text and a field name, it returns auto-complete suggestions for the field.

Parameters

key	required	Search field key
text	required	Search term text
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)
agentcustomeridentifi	optional	The customer identifier

er__contains		
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfree percentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfree percentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfree percentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolume type	optional	The agent disk metrics volume type
agentdiskmetricsvolume type__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylast updateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent ldr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)

agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentssubscribeondbetween	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionstatus	optional	The agent VSS protection status

tus		
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdifferfreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset

assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)

countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups
identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name

infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8sdeploymentstrategy	optional	Deployment Strategy
k8sdeploymentstrategy__contains	optional	Deployment Strategy
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name
k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node

k8snode__nin	optional	The Kubernetes Node (not in)
k8spolicytype	optional	Policy Type
k8spolicytype__contains	optional	Policy Type
k8sresourceid	optional	The Kubernetes Resource ID
k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8sservicename	optional	Service Name
k8sservicename__contains	optional	Service Name
k8sservicetype	optional	Service Type
k8sservicetype__contains	optional	Service Type
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8supdatestrategy	optional	Update Strategy
k8supdatestrategy__contains	optional	Update Strategy
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
lastactivedt__between	optional	The last active date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
limit	optional	Limit number of returned items
macaddresses__contains	optional	The MAC addresses
memoryreadable	optional	The memory of the device in human readable format

memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networksecuritygroups__contains	optional	The network security group
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
serialnumber	optional	The serial number

serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnetid__contains	optional	The subnet ID
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
virtualnetworkid__contains	optional	The virtual network ID

Get assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)

assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)

cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type

resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

pagination		false	see Assets - response - pagination table

Assets - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Assets using POST

POST /web/api/v2.1/xdr/assets/data-analysis

POST API to get Assets

Parameters

accountids	optional	List of Account IDs to filter by
groupids	optional	List of Group IDs to filter by
siteids	optional	List of Site IDs to filter by

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Perform action

POST /web/api/v2.1/xdr/assets/data-analysis/action

Perform action on selected assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)

alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID

ains		
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)

Auto Complete

GET /web/api/v2.1/xdr/assets/data-analysis/filters/autocomplete

Use this command to get values for other fields. When you send this command with input text and a field name, it returns auto-complete suggestions for the field.

Parameters

key	required	Search field key
text	required	Search term text
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id

cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by

id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items

Inventory Data Store

Assets

GET /web/api/v2.1/xdr/assets/data-store

Get assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)

assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)

cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__notin	optional	The cloud tags key value (not in)
connectivitystatus	optional	Connectivity
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
data_classification_scan_status__contains	optional	Data classification scan status
data_classification_status__contains	optional	Data classification status
data_types__contains	optional	Data types contains
dataclassificationpolicystatus	optional	Data Classification Policy
dataclassificationscanstatus	optional	Data classification scan status to exclude
dataclassificationstatuses	optional	Data Classification Status
dataclassificationstatuses__notin	optional	Data Classification Status (not in)
datatypes	optional	Data Types
datatypes__notin	optional	Data Types (not in)
devicereview	optional	The asset review
devicereview__notin	optional	The asset review (not in)
encryptiontype	optional	The encryption type
encryptiontype__notin	optional	The encryption type (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID

id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
ispublic	optional	Whether there is public access or not
ispublic__nin	optional	Whether there is public access or not (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
objectcount	optional	The number of objects in the bucket
objectcount__nin	optional	The number of objects in the bucket (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
scannerstatus	optional	Scanner
scanstatus	optional	The CDS malware scan status
scanstatus__contains	optional	The CDS malware scan status
scanstatus__nin	optional	The CDS malware scan status (not in)
siteids	optional	List of Site IDs to filter by

skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
threatdetectionpolicystatus	optional	Threat Detection Policy
threatdetectionstatus	optional	Threat Detection Status
threatdetectionstatus__contains	optional	The threat detection status
threatdetectionstatus__nin	optional	Threat Detection Status (not in)
versioningenabled	optional	Whether there is versioning enabled or not

alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)

cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
connectivitystatus	optional	Connectivity
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
data_classification_scan_status__contains	optional	Data classification scan status
data_classification_status__contains	optional	Data classification status
data_types__contains	optional	Data types contains
dataclassificationpolicystatus	optional	Data Classification Policy
dataclassificationstatus	optional	Data classification scan status to exclude
dataclassificationstatus	optional	Data Classification Status
dataclassificationstatus	optional	Data Classification Status (not in)

Inventory Data Store Filters

Filter counts

GET /web/api/v2.1/xdr/assets/data-store/filters/count

Get filter counts

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)

cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)

Auto Complete

GET /web/api/v2.1/xdr/assets/data-store/filters/autocomplete

Use this command to get values for other fields. When you send this command with input text and a field name, it returns auto-complete suggestions for the field.

Parameters

key	required	Search field key
text	required	Search term text
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id

cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
connectivitystatus	optional	Connectivity
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
data_classification_scan_status__contains	optional	Data classification scan status

data_classification_status__contains	optional	Data classification status
data_types__contains	optional	Data types contains
dataclassificationpolicystatus	optional	Data Classification Policy
dataclassificationscanstatus	optional	Data classification scan status to exclude
dataclassificationstatuses	optional	Data Classification Status
dataclassificationstatuses__nin	optional	Data Classification Status (not in)
datatypes	optional	Data Types
datatypes__nin	optional	Data Types (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
encryptiontype	optional	The encryption type
encryptiontype__nin	optional	The encryption type (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
ispublic	optional	Whether there is public access or not
ispublic__nin	optional	Whether there is public access or not (not in)
limit	optional	Limit number of returned items
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)

objectcount	optional	The number of objects in the bucket
objectcount__nin	optional	The number of objects in the bucket (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
scannerstatus	optional	Scanner
scanstatus	optional	The CDS malware scan status
scanstatus__contains	optional	The CDS malware scan status
scanstatus__nin	optional	The CDS malware scan status (not in)
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

threatdetectionpolicystatus	optional	Threat Detection Policy
threatdetectionstatus	optional	Threat Detection Status
threatdetectionstatus_contains	optional	The threat detection status
threatdetectionstatus_nin	optional	Threat Detection Status (not in)
versioningenabled	optional	Whether there is versioning enabled or not

Inventory Developer Tool

Assets

GET /web/api/v2.1/xdr/assets/developer-tool

Get assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)

assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)

cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type

resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

tagsKeyValue__nin	Tags (not in)	false	string []

Perform action

POST /web/api/v2.1/xdr/assets/developer-tool/action

Perform action on selected assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)

alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID

ains		
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type

resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Export assets to CSV or JSON

GET /web/api/v2.1/xdr/assets/developer-tool/export

Returns the results for given inventory filter in a CSV or JSON format

Parameters

exportformat	required	Export format
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid	optional	The cloud provider account ID

d__contains		
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.

devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.

sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Available actions

POST /web/api/v2.1/xdr/assets/developer-tool/available-actions/with-status

Get available actions

Parameters

Inventory Device

Assets

GET /web/api/v2.1/xdr/assets/device

Get assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email

assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
eppunsupportedunknown__nin	optional	The agent supported or unknown state (not in)

firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
lastupdatedt__between	optional	The last update date
limit	optional	Limit number of returned items (1-1000)
macaddresses__contains	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)

os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up

		execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
udpports	optional	The UDP ports

Export assets to CSV or JSON

GET /web/api/v2.1/xdr/assets/device/export

Returns the results for given inventory filter in a CSV or JSON format

Parameters

exportformat	required	Export format
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists

alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)

n		
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunkn own	optional	The agent supported or unknown state
eppunsupportedunkno wn__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contai ns	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
lastupdatedt__betwee n	optional	The last update date
limit	optional	Limit number of returned items (1-1000)
macaddresses__contai ns	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device
manufacturer__contai ns	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format

memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type

resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
udpports	optional	The UDP ports

Response Messages

id__in	List of selected inventory ids	false	string []
id__nin	List of inventory ids to exclude from select_all	false	string []

Inventory Device Filters

Filter counts

GET /web/api/v2.1/xdr/assets/device/filters/count

Get filter counts

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)

assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
eppunsupportedunknown__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)

internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
lastupdatedt__between	optional	The last update date
macaddresses__contains	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkey__contain	optional	Free-text filter by Ranger tag key (supports multiple values)

s		
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

tcpports	optional	The TCP ports
udpports	optional	The UDP ports

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	undefined []
errors	Errors	false	array

Free text filters

GET /web/api/v2.1/xdr/assets/device/filters/free-text

Get free text filters

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	undefined []
errors	Errors	false	array

Auto Complete

GET /web/api/v2.1/xdr/assets/device/filters/autocomplete

Use this command to get values for other fields. When you send this command with input text and a field name, it returns auto-complete suggestions for the field.

Parameters

key	required	Search field key
text	required	Search term text
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset

assetstatus__nin	optional	The status of the asset (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
eppunsupportedunknown__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs

ipaddress__contains	optional	The IP addresses
lastupdatedt__between	optional	The last update date
limit	optional	Limit number of returned items
macaddresses__contains	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkey__contain	optional	Free-text filter by Ranger tag key (supports multiple values)

s		
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

tcpports	optional	The TCP ports
udpports	optional	The UDP ports

Inventory Endpoint Surface

Assets

GET /web/api/v2.1/xdr/assets/surface/endpoint

Get inventory endpoint assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine

agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)
agentcustomeridentifier__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfreepercentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolumetype	optional	The agent disk metrics volume type
agentdiskmetricsvolumetype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylastupdateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)

agentidrconnectivity	optional	The agent ldr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)
agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID

agentsubscribeondt__between	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionstatus	optional	The agent VSS protection status
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffareafreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__ni	optional	Asset Contact Email (not in)

n		
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID

identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups
identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcservice	optional	Is DC Server
lastactivedt__between	optional	The last active date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
limit	optional	Limit number of returned items (1-1000)
macaddresses__contains	optional	The MAC addresses
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)

name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.

sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

assetEnvironment	The environment that the asset exists in - AWS Azure GCP Active Directory	false	string []
assetEnvironment__nin	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)	false	string []
assetStatus	The status of the asset	false	string []
assetStatus__nin	The status of the asset (not in)	false	string []
coreCount	The number of cores	false	integer []
coreCount__nin	The number of cores (not in)	false	integer []
countOnly	If true, only total number of items will be returned, without any of the actual objects.	false	boolean
countsFor	The columns for which filter count would be returned for	false	string []
cpu__contains	The CPU	false	string []
csvFilterId	The ID of the CSV file to filter by	false	integer
cursor	Cursor position returned by the last request. Use to iterate over more than 1000 items.	false	string
deviceReview	The asset review	false	string []
deviceReview__nin	The asset review (not in)	false	string []
domain	The domain of the device	false	string []
domain__contains	The domain	false	string []
domain__nin	The domain of the device (not in)	false	string []
firstSeenDt__between	The first seen date	false	string
gatewayIps__contains	The gateway IPs	false	string []
gatewayMacs__contains	The gateway MACs	false	string []
groupIds	List of Group IDs to filter by	false	string []
hostnames__contains	The hostnames	false	string []

id__contains	The ID	false	string []
id__in	The ID	false	string []
identityAd__contains	Any AD string	false	string []
identityAdMachine__contains	AD machine or its groups	false	string []
identityAdMachineDistinguishedName__contains	AD machine DN	false	string []
identityAdMachineMembership__contains	AD machine groups	false	string []
identityAdUser__contains	AD user or their groups	false	string []
identityAdUserDistinguishedName__contains	AD user DN	false	string []
identityAdUserMembership__contains	AD user groups	false	string []
imageName__contains	Free-text filter by the image name	false	string []
infectionStatus	The status alerts of the asset	false	string []
infectionStatus__nin	The status alerts of the asset (not in)	false	string []
internalIps__contains	The internal IPs	false	string []
ipAddress__contains	The IP addresses	false	string []
isAdConnector	Is AD Connector	false	boolean []
isDcServer	Is DC Server	false	boolean []
lastActiveDt__between	The last active date	false	string
legacy_identity_policy_name__contains	The legacy identity policy name	false	string []
legacyIdentityPolicyName	Legacy Identity Policy Name	false	string []
limit	Limit number of returned items (1-1000)	false	integer
macAddresses__contains	The MAC addresses	false	string []
memoryReadable	The memory of the device in human readable format	false	string []
memoryReadable__nin	The memory of the device in human readable format (not in)	false	string []
missingCoverage	The missing coverage for the asset	false	string []
missingCoverage__nin	The missing coverage for the asset (not in)	false	string []
name__contains	The name	false	string []

names	Name	false	string []
names__nin	Name (not in)	false	string []
os	The operating system of the device	false	string []
os__nin	The operating system of the device (not in)	false	string []
osFamily	The operating system family of the device	false	string []
osFamily__nin	The operating system family of the device (not in)	false	string []
osNameVersion	The operating system name and version of the device	false	string []
osNameVersion__contains	The OS names and versions	false	string []
osNameVersion__nin	The operating system name and version of the device (not in)	false	string []
osVersion	The operating system version of the device	false	string []
osVersion__contains	The OS versions	false	string []
osVersion__nin	The operating system version of the device (not in)	false	string []
resourceType	The canonical name for the resource type	false	string []
resourceType__contains	The Asset Type	false	string []
resourceType__nin	The canonical name for the resource type (not in)	false	string []
riskFactors	The risk factors associated with the asset	false	string []
riskFactors__nin	The risk factors associated with the asset (not in)	false	string []
s1UpdatedAt__between	The Last Seen date and time for the asset	false	string
serialNumber	The serial number	false	string []
serialNumber__contains	The serial number	false	string []
serialNumber__nin	The serial number (not in)	false	string []
sitelds	List of Site IDs to filter by	false	string []
skip	Skip first number of items (0-1000). To iterate over more than 1000 items,	false	integer

	use "cursor".		
skipCount	If true, total number of items will not be calculated, which speeds up execution time.	false	boolean
sortBy	The column to sort the results by.	false	enum
sortOrder	Sort direction	false	enum
subCategory	The sub-category that each resource belongs to	false	string []
subCategory__nin	The sub-category that each resource belongs to (not in)	false	string []
subnets__contains	The subnets	false	string []
surfaces	The Surface that each asset belongs to	false	string []
surfaces__nin	The Surface that each asset belongs to (not in)	false	string []
tagsKey	Tag Keys	false	string []
tagsKey__contains	Free-text filter by tag key (supports multiple values)	false	string []
tagsKey__exists	Tag Keys exists	false	string []
tagsKey__nexists	Tag Keys not exists	false	string []
tagsKey__nin	Tag Keys (not in)	false	string []
tagsKeyValue	Tags	false	string []
tagsKeyValue__contains	Free-text filter by tag key value (supports multiple values)	false	string []
tagsKeyValue__nin	Tags (not in)	false	string []

Export assets to CSV or JSON

GET /web/api/v2.1/xdr/assets/surface/endpoint/export

Returns the results for given inventory filter in a CSV or JSON format

Parameters

exportformat	required	Export format
accountids	optional	List of Account IDs to filter by

activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)
agentcustomeridentifier__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfreepercentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolumetype	optional	The agent disk metrics volume type

agentdiskmetricsvolume__type__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylastupdateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent Idr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)
agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)

agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentssubscribeondt__between	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionstatus	optional	The agent VSS protection status
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffareafreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes

alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review

devicereview__nin	optional	The asset review (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups
identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector

isdcserver	optional	Is DC Server
lastactivedt__between	optional	The last active date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
limit	optional	Limit number of returned items (1-1000)
macaddresses__contains	optional	The MAC addresses
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)

riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)
agentcustomeridentifier__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned

agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfreepercentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolumetype	optional	The agent disk metrics volume type
agentdiskmetricsvolumetype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylastupdateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent ldr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)
agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions

ns		
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentsubscribeondbetween	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionstatus	optional	The agent VSS protection status
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)

agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffareafreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)

countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups
identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset

infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
lastactivedt__between	optional	The last active date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
macaddresses__contains	optional	The MAC addresses
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
resourcetype	optional	The canonical name for the resource type

resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Inventory Endpoint Surface Filters

Filter counts

GET /web/api/v2.1/xdr/assets/surface/endpoint/filters/count

Get Endpoint filter counts

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)

agentcustomeridentifier__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfreepercentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolumetype	optional	The agent disk metrics volume type
agentdiskmetricsvolumetype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylastupdateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent Idr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)

agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentssubscribeondt__between	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionsta	optional	The agent VSS protection status

tus		
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdifferfreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset

assetstatus__nin	optional	The status of the asset (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups
identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermember	optional	AD user groups

ship__contains		
imagename__contains	optional	Free-text filter by the image name

Auto Complete

GET /web/api/v2.1/xdr/assets/surface/endpoint/filters/autocomplete

Use this command to get values for other fields. When you send this command with input text and a field name, it returns auto-complete suggestions for the field.

Parameters

key	required	Search field key
text	required	Search term text
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)
agentcustomeridentifi	optional	The customer identifier

er__contains		
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfree percentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfree percentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfree percentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolu metype	optional	The agent disk metrics volume type
agentdiskmetricsvolu metype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__ nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivityl astupdateddt__betwe en	optional	The SDL connectivity last active
agentfulldiskscandt__ between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__ni n	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent ldr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__ni n	optional	The agent installer type (not in)
agentlastloggedinuser __contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)

agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentssubscribeondt__between	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled

Filter counts

GET /web/api/v2.1/xdr/assets/filters/count

Get filter counts

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
agentagentversion	optional	The agent version
agentantitamperingstatus	optional	The agent anti tampering status
agentconsoleconnectivity	optional	The agent console connectivity
agentidrconnectivity	optional	The agent idr connectivity
agentoperationalstate	optional	The agent operational state
agentpendingactions	optional	The agent pending actions
agentvssrollbackstatus	optional	The agent VSS rollback status
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys

alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
category	optional	The category that each resource belongs to
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit

cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
osfamily	optional	The operating system family of the device

region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Auto Complete

GET /web/api/v2.1/xdr/assets/filters/autocomplete

Use this command to get values for other fields. When you send this command with input text and a field name, it returns auto-complete suggestions for the field.

Parameters

key	required	Search field key
text	required	Search term text
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
agentagentversion	optional	The agent version
agentantitamperingstatus	optional	The agent anti tampering status
agentconsoleconnectivity	optional	The agent console connectivity
agentidrconnectivity	optional	The agent idr connectivity
agentoperationalstate	optional	The agent operational state
agentpendingactions	optional	The agent pending actions
agentvssrollbackstatus	optional	The agent VSS rollback status
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)

assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
category	optional	The category that each resource belongs to
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)

cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
osfamily	optional	The operating system family of the device
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)

riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

surface	The surface that each resource belongs to	false	enum

Inventory Function

Assets

GET /web/api/v2.1/xdr/assets/function

Get assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags

alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID

cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted

region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Perform action

POST /web/api/v2.1/xdr/assets/function/action

Perform action on selected assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)

alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID

ains		
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)

assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganiza	optional	The cloud provider organization unit

tionunit__contains		
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)

region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Inventory Function Filters

Filter counts

GET /web/api/v2.1/xdr/assets/function/filters/count

Get filter counts

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)

cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review

devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)

Inventory Governance

Assets

GET /web/api/v2.1/xdr/assets/governance

Get assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)

assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)

cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__notin	optional	The cloud tags key value (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__notin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__notin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__notin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__notin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__notin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type

resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Export assets to CSV or JSON

GET /web/api/v2.1/xdr/assets/governance/export

Returns the results for given inventory filter in a CSV or JSON format

Parameters

exportformat	required	Export format
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists

alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID

cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)

region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Perform action

POST /web/api/v2.1/xdr/assets/governance/action

Perform action on selected assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)

assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countsfor	optional	The columns for which filter count would be returned for

csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)

tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Inventory Identity

Assets

GET /web/api/v2.1/xdr/assets/identity

Get assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)

assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
badpasswordtime__between	optional	Bad Password Time
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contain	optional	Free-text filter by cloud tag key (supports multiple values)

s		
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
cn	optional	The LDAP Common Name
cn__contains	optional	The LDAP Common Name
cn__nin	optional	The LDAP Common Name (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
deleted	optional	Whether the AD Entity is deleted or not
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
displayname__contains	optional	The Display Name
distinguishedname__contains	optional	The Distinguished Name
domain	optional	The AD Domain Name
domain__contains	optional	The AD Domain Name
domain__nin	optional	The AD Domain Name (not in)
enabled	optional	Whether the Identity Group is enabled or not
forest	optional	The Forest Name
forest__contains	optional	The Forest Name
forest__nin	optional	The Forest Name (not in)
givenname__contains	optional	Given Name

groupids	optional	List of Group IDs to filter by
grouptype	optional	The Group Type
grouptype__nin	optional	The Group Type (not in)
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
last_modified_time__between	optional	Lock-out Time
lastlogontime__between	optional	The Last time of User Login
limit	optional	Limit number of returned items (1-1000)
lockouttime__between	optional	Lock-out Time
mail	optional	The Email Address
mail__contains	optional	The Email Address
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
objectcategory	optional	The Object Category
objectcategory__nin	optional	The Object Category (not in)
objectclass	optional	The Object Class
objectclass__nin	optional	The Object Class (not in)
objectguid__contains	optional	The Object GUID
objectsid__contains	optional	The Object SID
onpremisesdistinguishedname__contains	optional	
onpremisesdomainname__contains	optional	On Premises Distinguished Name

onpremisesaccountname__contains	optional	On Premises SAM Account Name
onpremisessecurityidentifier__contains	optional	
onpremisesuserprincipalname__contains	optional	On Premises User Principal Name
othermails__contains	optional	Other Mails
passwordneverexpires	optional	Whether the password never expires
privileged	optional	Whether the AD Entity is privileged or not
proxyaddresses__contains	optional	Proxy Addresses
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
lastupdatedat__between	optional	The Last Seen date and time for the asset
samaccountname	optional	The SAM Account Name
samaccountname__nin	optional	The SAM Account Name (not in)
serviceaccount	optional	The Service Account
serviceprincipalname__contains	optional	The Service Principal Name
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.

sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
useraccountcontrol	optional	The User Account Control
useraccountcontrol__nin	optional	The User Account Control (not in)
userpasswordexpirytimecomputed__between	optional	The User Password Expiry Time
userprincipalname	optional	The User Principal Name
userprincipalname__contains	optional	The User Principal Name
userprincipalname__nin	optional	The User Principal Name (not in)

userPrincipalName__contains	The User Principal Name	false	string []
userPrincipalName__nin	The User Principal Name (not in)	false	string []

Export assets to CSV or JSON

GET /web/api/v2.1/xdr/assets/identity/export

Returns the results for given inventory filter in a CSV or JSON format

Parameters

exportformat	required	Export format
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP

n		Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
badpasswordtime__between	optional	Bad Password Time
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)

cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
cn	optional	The LDAP Common Name
cn__contains	optional	The LDAP Common Name
cn__nin	optional	The LDAP Common Name (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
deleted	optional	Whether the AD Entity is deleted or not
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
displayname__contains	optional	The Display Name
distinguishedname__contains	optional	The Distinguished Name
domain	optional	The AD Domain Name
domain__contains	optional	The AD Domain Name
domain__nin	optional	The AD Domain Name (not in)
enabled	optional	Whether the Identity Group is enabled or not
forest	optional	The Forest Name
forest__contains	optional	The Forest Name
forest__nin	optional	The Forest Name (not in)
givenname__contains	optional	Given Name
groupids	optional	List of Group IDs to filter by
grouptype	optional	The Group Type
grouptype__nin	optional	The Group Type (not in)
id__contains	optional	The ID
id__in	optional	The ID

imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
last_modified_time__between	optional	Lock-out Time
lastlogontime__between	optional	The Last time of User Login
limit	optional	Limit number of returned items (1-1000)
lockouttime__between	optional	Lock-out Time
mail	optional	The Email Address
mail__contains	optional	The Email Address
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
objectcategory	optional	The Object Category
objectcategory__nin	optional	The Object Category (not in)
objectclass	optional	The Object Class
objectclass__nin	optional	The Object Class (not in)
objectguid__contains	optional	The Object GUID
objectsid__contains	optional	The Object SID
onpremisesdistinguishedname__contains	optional	
onpremisesdomainname__contains	optional	On Premises Distinguished Name
onpremisesaccountname__contains	optional	On Premises SAM Account Name
onpremisessecurityidentifier__contains	optional	
onpremisesuserprincipalname__contains	optional	On Premises User Principal Name

othermails__contains	optional	Other Mails
passwordneverexpire	optional	Whether the password never expires
privileged	optional	Whether the AD Entity is privileged or not
proxyaddresses__contains	optional	Proxy Addresses
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
samaccountname	optional	The SAM Account Name
samaccountname__nin	optional	The SAM Account Name (not in)
serviceaccount	optional	The Service Account
serviceprincipalname__contains	optional	The Service Principal Name
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to

surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
useraccountcontrol	optional	The User Account Control
useraccountcontrol__nin	optional	The User Account Control (not in)
userpasswordexpirytimecomputed__between	optional	The User Password Expiry Time
userprincipalname	optional	The User Principal Name
userprincipalname__contains	optional	The User Principal Name
userprincipalname__nin	optional	The User Principal Name (not in)

Inventory Identity Filters

Filter counts

GET /web/api/v2.1/xdr/assets/identity/filters/count

Get filter counts

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)

badpasswordtime__between	optional	Bad Password Time
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
cn	optional	The LDAP Common Name

cn__contains	optional	The LDAP Common Name
cn__nin	optional	The LDAP Common Name (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
deleted	optional	Whether the AD Entity is deleted or not
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
displayname__contains	optional	The Display Name
distinguishedname__contains	optional	The Distinguished Name
domain	optional	The AD Domain Name
domain__contains	optional	The AD Domain Name
domain__nin	optional	The AD Domain Name (not in)
enabled	optional	Whether the Identity Group is enabled or not
forest	optional	The Forest Name
forest__contains	optional	The Forest Name
forest__nin	optional	The Forest Name (not in)
givenname__contains	optional	Given Name
groupids	optional	List of Group IDs to filter by
grouptype	optional	The Group Type
grouptype__nin	optional	The Group Type (not in)
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
last_modified_time__between	optional	Lock-out Time
lastlogontime__between	optional	The Last time of User Login

lockouttime__between	optional	Lock-out Time
mail	optional	The Email Address
mail__contains	optional	The Email Address
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
objectcategory	optional	The Object Category
objectcategory__nin	optional	The Object Category (not in)
objectclass	optional	The Object Class
objectclass__nin	optional	The Object Class (not in)
objectguid__contains	optional	The Object GUID
objectsid__contains	optional	The Object SID
onpremisesdistinguis hedname__contains	optional	
onpremisesdomainnam e__contains	optional	On Premises Distinguished Name
onpremisesamaccoun tname__contains	optional	On Premises SAM Account Name
onpremisessecurityiden tifier__contains	optional	
onpremisesuserprinci palname__contains	optional	On Premises User Principal Name
othermails__contains	optional	Other Mails
passwordneverexpire	optional	Whether the password never expires
privileged	optional	Whether the AD Entity is privileged or not
proxyaddresses__conta ins	optional	Proxy Addresses
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted

region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
samaccountname	optional	The SAM Account Name
samaccountname__nin	optional	The SAM Account Name (not in)
serviceaccount	optional	The Service Account
serviceprincipalname__contains	optional	The Service Principal Name
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
useraccountcontrol	optional	The User Account Control
useraccountcontrol__nin	optional	The User Account Control (not in)

userpasswordexpirytimecomputed__between	optional	The User Password Expiry Time
userprincipalname	optional	The User Principal Name
userprincipalname__contains	optional	The User Principal Name
userprincipalname__notin	optional	The User Principal Name (not in)

Auto Complete

GET /web/api/v2.1/xdr/assets/identity/filters/autocomplete

Use this command to get values for other fields. When you send this command with input text and a field name, it returns auto-complete suggestions for the field.

Parameters

key	required	Search field key
text	required	Search term text
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
badpasswordtime__between	optional	Bad Password Time

cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
cn	optional	The LDAP Common Name
cn__contains	optional	The LDAP Common Name
cn__nin	optional	The LDAP Common Name (not in)

countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
deleted	optional	Whether the AD Entity is deleted or not
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
displayname__contains	optional	The Display Name

Inventory Identity Surface

Assets

GET /web/api/v2.1/xdr/assets/surface/identity

Get identity surface assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)

assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
badpasswordtime__between	optional	Bad Password Time
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contain	optional	Free-text filter by cloud tag key (supports multiple values)

s		
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
cn	optional	The LDAP Common Name
cn__contains	optional	The LDAP Common Name
cn__nin	optional	The LDAP Common Name (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
deleted	optional	Whether the AD Entity is deleted or not
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
displayname__contains	optional	The Display Name
distinguishedname__contains	optional	The Distinguished Name
domain	optional	The AD Domain Name
domain__contains	optional	The AD Domain Name
domain__nin	optional	The AD Domain Name (not in)
enabled	optional	Whether the Identity Group is enabled or not
forest	optional	The Forest Name
forest__contains	optional	The Forest Name
forest__nin	optional	The Forest Name (not in)
givenname__contains	optional	Given Name

groupids	optional	List of Group IDs to filter by
grouptype	optional	The Group Type
grouptype__nin	optional	The Group Type (not in)
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
last_modified_time__between	optional	Lock-out Time
lastlogontime__between	optional	The Last time of User Login
limit	optional	Limit number of returned items (1-1000)
lockouttime__between	optional	Lock-out Time
mail	optional	The Email Address
mail__contains	optional	The Email Address
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
objectcategory	optional	The Object Category
objectcategory__nin	optional	The Object Category (not in)
objectclass	optional	The Object Class
objectclass__nin	optional	The Object Class (not in)
objectguid__contains	optional	The Object GUID
objectsid__contains	optional	The Object SID
onpremisesdistinguishedname__contains	optional	
onpremisesdomainname__contains	optional	On Premises Distinguished Name

onpremisesamaccountname__contains	optional	On Premises SAM Account Name
onpremisessecurityidentifier__contains	optional	
onpremisesuserprincipalname__contains	optional	On Premises User Principal Name
othermails__contains	optional	Other Mails
passwordneverexpire	optional	Whether the password never expires
privileged	optional	Whether the AD Entity is privileged or not
proxyaddresses__contains	optional	Proxy Addresses
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
slupdatedat__between	optional	The Last Seen date and time for the asset
samaccountname	optional	The SAM Account Name
samaccountname__nin	optional	The SAM Account Name (not in)
serviceaccount	optional	The Service Account
serviceprincipalname__contains	optional	The Service Principal Name
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.

sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
useraccountcontrol	optional	The User Account Control
useraccountcontrol__nin	optional	The User Account Control (not in)
userpasswordexpirytimecomputed__between	optional	The User Password Expiry Time
userprincipalname	optional	The User Principal Name
userprincipalname__contains	optional	The User Principal Name
userprincipalname__nin	optional	The User Principal Name (not in)

Response Messages

Response Schema

Name	Description	Required	Value
data	Response data	false	undefined []
errors	Errors	false	array
pagination		false	see Assets - response - pagination table

Assets - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Export assets to CSV or JSON

GET /web/api/v2.1/xdr/assets/surface/identity/export

Returns the results for given inventory filter in a CSV or JSON format

Parameters

exportformat	required	Export format
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to

assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
badpasswordtime__between	optional	Bad Password Time
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)

cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
cn	optional	The LDAP Common Name
cn__contains	optional	The LDAP Common Name
cn__nin	optional	The LDAP Common Name (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
deleted	optional	Whether the AD Entity is deleted or not
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
displayname__contains	optional	The Display Name
distinguishedname__contains	optional	The Distinguished Name
domain	optional	The AD Domain Name
domain__contains	optional	The AD Domain Name
domain__nin	optional	The AD Domain Name (not in)

Perform action

POST /web/api/v2.1/xdr/assets/surface/identity/action

Perform action on selected assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
badpasswordtime__between	optional	Bad Password Time
cloudprovideraccountid	optional	The cloud provider account id

cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
cn	optional	The LDAP Common Name
cn__contains	optional	The LDAP Common Name
cn__nin	optional	The LDAP Common Name (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by

deleted	optional	Whether the AD Entity is deleted or not
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
displayname__contains	optional	The Display Name
distinguishedname__contains	optional	The Distinguished Name
domain	optional	The AD Domain Name
domain__contains	optional	The AD Domain Name
domain__nin	optional	The AD Domain Name (not in)
enabled	optional	Whether the Identity Group is enabled or not
forest	optional	The Forest Name
forest__contains	optional	The Forest Name
forest__nin	optional	The Forest Name (not in)
givenname__contains	optional	Given Name
groupids	optional	List of Group IDs to filter by
grouptype	optional	The Group Type
grouptype__nin	optional	The Group Type (not in)
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
last_modified_time__between	optional	Lock-out Time
lastlogontime__between	optional	The Last time of User Login
lockouttime__between	optional	Lock-out Time
mail	optional	The Email Address
mail__contains	optional	The Email Address
missingcoverage	optional	The missing coverage for the asset

missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)

alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)

assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)

cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__notin	optional	The cloud tags key value (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__notin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__notin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__notin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__notin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__notin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type

resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Export assets to CSV or JSON

GET /web/api/v2.1/xdr/assets/network/export

Returns the results for given inventory filter in a CSV or JSON format

Parameters

exportformat	required	Export format
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists

alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID

cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)

region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Inventory Network Discovery Surface

Assets

GET /web/api/v2.1/xdr/assets/surface/networkDiscovery

Get inventory of Network Discovery surface assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)

assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
category	optional	The category that each resource belongs to
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
eppunsupportedunknown__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames

id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
lastupdatedt__between	optional	The last update date
limit	optional	Limit number of returned items (1-1000)
macaddresses__contains	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions

ins		
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets

surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
udpports	optional	The UDP ports

Name	Description	Required	Value
data	Response data	false	undefined []
errors	Errors	false	array
pagination		false	see Assets - response - pagination table

Assets - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Export assets to CSV or JSON

GET /web/api/v2.1/xdr/assets/surface/networkDiscovery/export

Returns the results for given inventory filter in a CSV or JSON format

Parameters

exportformat	required	Export format
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__ni	optional	Asset Contact Email (not in)

n		
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
eppunsupportedunknown__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date

gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
lastupdatedt__between	optional	The last update date
limit	optional	Limit number of returned items (1-1000)
macaddresses__contains	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
os	optional	The operating system of the device

os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.

sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
udpports	optional	The UDP ports

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

Auto Complete

GET /web/api/v2.1/xdr/assets/surface/networkDiscovery/filters/autocomplete

Use this command to get values for other fields. When you send this command with input text and a field name, it returns auto-complete suggestions for the field.

Parameters

key	required	Search field key
text	required	Search term text
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset

assetstatus__nin	optional	The status of the asset (not in)
category	optional	The category that each resource belongs to
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
eppunsupportedunknown__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)

internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
lastupdatedt__between	optional	The last update date
limit	optional	Limit number of returned items
macaddresses__contains	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)

rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)

tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
udpports	optional	The UDP ports

Inventory Network Filters

Filter counts

GET /web/api/v2.1/xdr/assets/network/filters/count

Get filter counts

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)

assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)

cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset

siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

Auto Complete

GET /web/api/v2.1/xdr/assets/network/filters/autocomplete

Use this command to get values for other fields. When you send this command with input text and a field name, it returns auto-complete suggestions for the field.

Parameters

key	required	Search field key
text	required	Search term text
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id

cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
groupids	optional	List of Group IDs to filter by

id__contains	optional	The ID
id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
limit	optional	Limit number of returned items
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists

tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)

note	Note	false	string
resourceId	Resource id	false	string

Inventory Server

Assets

GET /web/api/v2.1/xdr/assets/server

Get assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)

agentcustomeridentifier__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfreepercentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolumetype	optional	The agent disk metrics volume type
agentdiskmetricsvolumetype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylastupdateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent Idr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)

agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentssubscribeondt__between	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionsta	optional	The agent VSS protection status

tus		
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdifferentialfreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset

assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)

countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
eppunsupportedunknown__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups

identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
isrogues	optional	Whether the instance is a rogue or not
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID

k8sclusterid__contains	optional	Kubernetes Cluster ID
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name
k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8sresourceid	optional	The Kubernetes Resource ID
k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
lastactivedt__between	optional	The last active date
lastupdatedt__between	optional	The last update date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
limit	optional	Limit number of returned items (1-1000)
macaddresses__contains	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device

manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
networksecuritygroups__contains	optional	The network security group
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)

rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
state	optional	The state of the instance
state__contains	optional	The state
state__nin	optional	The state of the instance (not in)
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnetid__contains	optional	The subnet ID

subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
udpports	optional	The UDP ports
virtualnetworkid__contains	optional	The virtual network ID

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	undefined []
errors	Errors	false	array
pagination		false	see Assets - response - pagination table

Assets - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Assets using POST

POST /web/api/v2.1/xdr/assets/server

POST API to get Assets

Parameters

accountids	optional	List of Account IDs to filter by
groupids	optional	List of Group IDs to filter by
siteids	optional	List of Site IDs to filter by

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

allTagsKey	User and cloud tag keys	false	string []
allTagsKey__exists	User and cloud tag keys exists	false	string []
allTagsKey__nexists	User and cloud tag keys not exists	false	string []
allTagsKey__nin	User and cloud tag keys (not in)	false	string []
allTagsKeyValue	User and cloud tags	false	string []
allTagsKeyValue__nin	User and cloud tags (not in)	false	string []
applicationName	The name of the application installed on a workstation or a server	false	string []
architecture	The architecture of the device	false	string []
architecture__nin	The architecture of the device (not in)	false	string []
assetContactEmail	Asset Contact Email	false	string []

assetContactEmail__nin	Asset Contact Email (not in)	false	string []
assetCriticality	The criticality that each asset belongs to	false	string []
assetCriticality__nin	The criticality that each asset belongs to (not in)	false	string []
assetEnvironment	The environment that the asset exists in - AWS Azure GCP Active Directory	false	string []
assetEnvironment__nin	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)	false	string []
assetStatus	The status of the asset	false	string []
assetStatus__nin	The status of the asset (not in)	false	string []
cloudProviderAccountId	The cloud provider account id	false	string []
cloudProviderAccountId__contains	The cloud provider account ID	false	string []
cloudProviderAccountId__nin	The cloud provider account id (not in)	false	string []
cloudProviderAccountName	The cloud provider account name	false	string []
cloudProviderAccountName__contains	The cloud provider account name	false	string []
cloudProviderAccountName__nin	The cloud provider account name (not in)	false	string []
cloudProviderOrganization__contains	The cloud provider organization	false	string []
cloudProviderOrganizationUnit__contains	The cloud provider organization unit	false	string []
cloudProviderProjectId__contains	The cloud provider project ID	false	string []
cloudProviderSubscriptionId__contains	The cloud provider subscription ID	false	string []
cloudResourceId__contains	The cloud resource ID	false	string []
cloudTagsKey	The cloud tags key	false	string []
cloudTagsKey__contains	Free-text filter by cloud tag key (supports multiple values)	false	string []
cloudTagsKey__nin	The cloud tags key (not in)	false	string []
cloudTagsKeyValue	The cloud tags key value	false	string []
cloudTagsKeyValue__contains	Free-text filter by cloud tag key value (supports multiple values)	false	string []
cloudTagsKeyValue__nin	The cloud tags key value (not in)	false	string []

coreCount	The number of cores	false	integer []
coreCount__nin	The number of cores (not in)	false	integer []
countOnly	If true, only total number of items will be returned, without any of the actual objects.	false	boolean
countsFor	The columns for which filter count would be returned for	false	string []
cpu__contains	The CPU	false	string []
csvFilterId	The ID of the CSV file to filter by	false	integer
cursor	Cursor position returned by the last request. Use to iterate over more than 1000 items.	false	string
detectedFromSite	The site from which the device was detected	false	string []
detectedFromSite__nin	The site from which the device was detected (not in)	false	string []
deviceReview	The asset review	false	string []
deviceReview__nin	The asset review (not in)	false	string []
discoveryMethods	The discovery methods	false	string []
discoveryMethods__nin	The discovery methods (not in)	false	string []
domain	The domain of the device	false	string []
domain__contains	The domain	false	string []
domain__nin	The domain of the device (not in)	false	string []
eppUnsupportedUnknown	The agent supported or unknown state	false	string []
eppUnsupportedUnknown__nin	The agent supported or unknown state (not in)	false	string []
firstSeenDt__between	The first seen date	false	string
gatewayIps__contains	The gateway IPs	false	string []
gatewayMacs__contains	The gateway MACs	false	string []
groupIds	List of Group IDs to filter by	false	string []
hostnames__contains	The hostnames	false	string []
id__contains	The ID	false	string []
id__in	The ID	false	string []
identityAd__contains	Any AD string	false	string []

identityAdMachine__contains	AD machine or its groups	false	string []
identityAdMachineDistinguishedName__contains	AD machine DN	false	string []
identityAdMachineMembership__contains	AD machine groups	false	string []
identityAdUser__contains	AD user or their groups	false	string []
identityAdUserDistinguishedName__contains	AD user DN	false	string []
identityAdUserMembership__contains	AD user groups	false	string []
imageId__contains	The image ID	false	string []
imageName__contains	Free-text filter by the image name	false	string []
infectionStatus	The status alerts of the asset	false	string []
infectionStatus__nin	The status alerts of the asset (not in)	false	string []
instanceId__contains	The instance ID	false	string []
instanceRole__contains	The instance role	false	string []
instanceType__contains	The instance type	false	string []
internalIps__contains	The internal IPs	false	string []
ipAddress__contains	The IP addresses	false	string []
isAdConnector	Is AD Connector	false	boolean []
isDcServer	Is DC Server	false	boolean []
isRogues	Whether the instance is a rogue or not	false	boolean []

k8sLabelsUnifiedKeyValue__contains	Free-text filter by Kubernetes Labels key value (supports multiple values)	false	string []
k8sNamespace	The Kubernetes Namespace Name	false	string []
k8sNamespace__contains	Namespace Name	false	string []
k8sNode	The Kubernetes Node	false	string []
k8sNode__contains	The Kubernetes node	false	string []
k8sNode__nin	The Kubernetes Node (not in)	false	string []
k8sResourceId	The Kubernetes Resource ID	false	string []
k8sResourceId__contains	Kubernetes Resource ID	false	string []
k8sRunningOnNodes	Running on Nodes	false	string []
k8sRunningOnNodes__contains	Running on nodes	false	see Assets using POST - body - k8sRunningOnNodes__contains table
k8sType	The Kubernetes Type	false	string []
k8sType__nin	The Kubernetes Type (not in)	false	string []
k8sVersion	The Kubernetes Version	false	string []
k8sVersion__nin	The Kubernetes Version (not in)	false	string []
lastActiveDt__between	The last active date	false	string
lastUpdateDt__between	The last update date	false	string
legacy_identity_policy_name__contains	The legacy identity policy name	false	string []
legacyIdentityPolicyName	Legacy Identity Policy Name	false	string []
limit	Limit number of returned items (1-1000)	false	integer
macAddresses__contains	The MAC addresses	false	string []
manufacturer	The manufacturer of the device	false	string []
manufacturer__contains	The manufacturer	false	string []
manufacturer__nin	The manufacturer of the device (not in)	false	string []
memoryReadable	The memory of the device in human readable format	false	string []
memoryReadable__nin	The memory of the device in human readable format (not in)	false	string []
missingCoverage	The missing coverage for the asset	false	string []
missingCoverage__nin	The missing coverage for the asset	false	string []

	(not in)		
name__contains	The name	false	string []
names	Name	false	string []
names__nin	Name (not in)	false	string []
networkName	The network name	false	string []
networkName__nin	The network name (not in)	false	string []
networkSecurityGroups__contains	The network security group	false	string []
os	The operating system of the device	false	string []
os__nin	The operating system of the device (not in)	false	string []
osFamily	The operating system family of the device	false	string []
osFamily__nin	The operating system family of the device (not in)	false	string []
osNameVersion	The operating system name and version of the device	false	string []
osNameVersion__contains	The OS names and versions	false	string []
osNameVersion__nin	The operating system name and version of the device (not in)	false	string []
osVersion	The operating system version of the device	false	string []
osVersion__contains	The OS versions	false	string []
osVersion__nin	The operating system version of the device (not in)	false	string []
rangerTagKey__contains	Free-text filter by Ranger tag key (supports multiple values)	false	string []
rangerTagKeyValue__contains	Free-text filter by Ranger tag key value (supports multiple values)	false	string []
rangerTagsKey	The ranger tags key	false	string []
rangerTagsKey__nin	The ranger tags key (not in)	false	string []
rangerTagsKeyValue	The ranger tags key value	false	string []
rangerTagsKeyValue__nin	The ranger tags key value (not in)	false	string []
region	The region	false	string []
region__contains	The geographical area where cloud resources are hosted	false	string []

region__nin	The region (not in)	false	string []
resourceType	The canonical name for the resource type	false	string []
resourceType__contains	The Asset Type	false	string []
resourceType__nin	The canonical name for the resource type (not in)	false	string []
riskFactors	The risk factors associated with the asset	false	string []
riskFactors__nin	The risk factors associated with the asset (not in)	false	string []
s1UpdatedAt__between	The Last Seen date and time for the asset	false	string
serialNumber	The serial number	false	string []
serialNumber__contains	The serial number	false	string []
serialNumber__nin	The serial number (not in)	false	string []
sitelds	List of Site IDs to filter by	false	string []
skip	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".	false	integer
skipCount	If true, total number of items will not be calculated, which speeds up execution time.	false	boolean
sortBy	The column to sort the results by.	false	enum
sortOrder	Sort direction	false	enum
state	The state of the instance	false	string []
state__contains	The state	false	string []
state__nin	The state of the instance (not in)	false	string []
subCategory	The sub-category that each resource belongs to	false	string []
subCategory__nin	The sub-category that each resource belongs to (not in)	false	string []
subnetId__contains	The subnet ID	false	string []
subnets__contains	The subnets	false	string []
surfaces	The Surface that each asset belongs to	false	string []
surfaces__nin	The Surface that each asset belongs	false	string []

	to (not in)		
tagsKey	Tag Keys	false	string []
tagsKey__contains	Free-text filter by tag key (supports multiple values)	false	string []
tagsKey__exists	Tag Keys exists	false	string []
tagsKey__nexists	Tag Keys not exists	false	string []
tagsKey__nin	Tag Keys (not in)	false	string []
tagsKeyValue	Tags	false	string []
tagsKeyValue__contains	Free-text filter by tag key value (supports multiple values)	false	string []
tagsKeyValue__nin	Tags (not in)	false	string []
tcpPorts	The TCP ports	false	string []
udpPorts	The UDP ports	false	string []
virtualNetworkId__contains	The virtual network ID	false	string []

Assets using POST - body - k8sRunningOnNodes__contains

Name	Description	Required	Value
		false	string []

Export assets to CSV or JSON

GET /web/api/v2.1/xdr/assets/server/export

Returns the results for given inventory filter in a CSV or JSON format

Parameters

exportformat	required	Export format
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version

agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)
agentcustomeridentifier__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfreepercentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolumetype	optional	The agent disk metrics volume type
agentdiskmetricsvolumetype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__	optional	The connection status between the agent and the SDL service (not

nin		in)
agentdvconnectivitylastupdateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent ldr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)
agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)

agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentsubscribeondt__between	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionstatus	optional	The agent VSS protection status
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffareafreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists

alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganiza	optional	The cloud provider organization unit

tionunit__contains		
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)

domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunkn own	optional	The agent supported or unknown state
eppunsupportedunkno wn__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contai ns	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__co ntains	optional	AD machine or its groups
identityadmachinedist inguishedname__conta ins	optional	AD machine DN
identityadmachinemem bership__contains	optional	AD machine groups
identityaduser__contai ns	optional	AD user or their groups
identityaduserdisting uishedname__contains	optional	AD user DN
identityadusermember ship__contains	optional	AD user groups
imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)

instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
isrogues	optional	Whether the instance is a rogue or not
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name
k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8sresourceid	optional	The Kubernetes Resource ID
k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes

k8srunningonnodes__contains	optional	Running on nodes
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
lastactivedt__between	optional	The last active date
lastupdatedt__between	optional	The last update date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
limit	optional	Limit number of returned items (1-1000)
macaddresses__contains	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
networksecuritygroups__contains	optional	The network security group
os	optional	The operating system of the device

os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
serialnumber	optional	The serial number

serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
state	optional	The state of the instance
state__contains	optional	The state
state__nin	optional	The state of the instance (not in)
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnetid__contains	optional	The subnet ID
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
udpports	optional	The UDP ports
virtualnetworkid__contains	optional	The virtual network ID

Perform action

POST /web/api/v2.1/xdr/assets/server/action

Perform action on selected assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity

ity		
agentconsolemigration status	optional	The agent console migration status
agentconsolemigration status__nin	optional	The agent console migration status (not in)
agentcustomeridentifi er__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfree percentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreep ercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreep ercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolu metype	optional	The agent disk metrics volume type
agentdiskmetricsvolu metype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__ nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivityl astupdateddt__betwe en	optional	The SDL connectivity last active
agentfulldiskscandt__ between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__ni n	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent ldr connectivity
agentinstallertype	optional	The agent installer type

agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)
agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentsubscribeondt__between	optional	The agent subscribe time

agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshot dt__between	optional	The agent VSS last snapshot date
agentvssprotectionsta tus	optional	The agent VSS protection status
agentvssprotectionsta tus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus __nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus_ _nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffa reafreepercentage__b etween	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__ni n	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to

assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value

cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
eppunsupportedunknown__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID

identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups
identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcservers	optional	Is DC Server
isrogues	optional	Whether the instance is a rogue or not
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster

k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name
k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8sresourceid	optional	The Kubernetes Resource ID
k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
lastactivedt__between	optional	The last active date
lastupdatedt__between	optional	The last update date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
macaddresses__contains	optional	The MAC addresses

manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
networksecuritygroups__contains	optional	The network security group
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key

rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)
agentcustomeridentifier__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned

agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfreepercentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolumetype	optional	The agent disk metrics volume type
agentdiskmetricsvolumetype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylastupdateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent ldr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)
agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions

ns		
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentsubscribeondbetween	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionstatus	optional	The agent VSS protection status
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)

agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffareafreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id

cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by

detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
eppunsupportedunknown__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups
identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups

identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
isrogues	optional	Whether the instance is a rogue or not
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID

Inventory Server Filters

Filter counts

GET /web/api/v2.1/xdr/assets/server/filters/count

Get filter counts

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)

agentcustomeridentifier__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfreepercentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolumetype	optional	The agent disk metrics volume type
agentdiskmetricsvolumetype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylastupdateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent Idr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)

agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentssubscribeondt__between	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionsta	optional	The agent VSS protection status

tus		
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdifferfreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset

assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)

countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
eppunsupportedunknown__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups
identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemem	optional	AD machine groups

bership__contains		
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
isrogues	optional	Whether the instance is a rogue or not
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyval	optional	Free-text filter by Kubernetes Labels key value (supports multiple

ue__contains		values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name
k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8sresourceid	optional	The Kubernetes Resource ID
k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
lastactivedt__between	optional	The last active date
lastupdatedt__between	optional	The last update date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
macaddresses__contains	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)

missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
networksecuritygroups__contains	optional	The network security group
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted

region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
state	optional	The state of the instance
state__contains	optional	The state
state__nin	optional	The state of the instance (not in)
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnetid__contains	optional	The subnet ID
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)

tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
udpports	optional	The UDP ports
virtualnetworkid__contains	optional	The virtual network ID

Auto Complete

GET /web/api/v2.1/xdr/assets/server/filters/autocomplete

Use this command to get values for other fields. When you send this command with input text and a field name, it returns auto-complete suggestions for the field.

Parameters

key	required	Search field key
text	required	Search term text
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)
agentcustomeridentifi	optional	The customer identifier

er__contains		
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfree percentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfree percentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfree percentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolu metype	optional	The agent disk metrics volume type
agentdiskmetricsvolu metype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__ nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivityl astupdateddt__betwe en	optional	The SDL connectivity last active
agentfulldiskscandt__ between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__ni n	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent ldr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__ni n	optional	The agent installer type (not in)
agentlastloggedinuser __contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)

agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentssubscribeondt__between	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionsta	optional	The agent VSS protection status

tus		
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdifferfreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset

assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)

countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
eppunsupportedunknown__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups
identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemem	optional	AD machine groups

bership__contains		
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imageid__contains	optional	The image ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
instanceid__contains	optional	The instance ID
instanceroles__contains	optional	The instance role
instancetype__contains	optional	The instance type
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
isrogues	optional	Whether the instance is a rogue or not
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyval	optional	Free-text filter by Kubernetes Labels key value (supports multiple

ue__contains		values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name
k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8sresourceid	optional	The Kubernetes Resource ID
k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
lastactivedt__between	optional	The last active date
lastupdatedt__between	optional	The last update date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
limit	optional	Limit number of returned items
macaddresses__contains	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format

memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
networksecuritygroups__contains	optional	The network security group
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkeys__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
region	optional	The region

region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
state	optional	The state of the instance
state__contains	optional	The state
state__nin	optional	The state of the instance (not in)
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnetid__contains	optional	The subnet ID
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)

s		
tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
udpports	optional	The UDP ports
virtualnetworkid__contains	optional	The virtual network ID

alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)

assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)

cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
connectivitystatus	optional	Connectivity
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
data_classification_scan_status__contains	optional	Data classification scan status
data_classification_status__contains	optional	Data classification status
data_types__contains	optional	Data types contains
dataclassificationpolicystatus	optional	Data Classification Policy
dataclassificationscanstatus	optional	Data classification scan status to exclude
dataclassificationstatuses	optional	Data Classification Status
dataclassificationstatuses__nin	optional	Data Classification Status (not in)
datatypes	optional	Data Types
datatypes__nin	optional	Data Types (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
encryptiontype	optional	The encryption type
encryptiontype__nin	optional	The encryption type (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID

id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
ispublic	optional	Whether there is public access or not
ispublic__nin	optional	Whether there is public access or not (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
objectcount	optional	The number of objects in the bucket
objectcount__nin	optional	The number of objects in the bucket (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
scannerstatus	optional	Scanner
scanstatus	optional	The CDS malware scan status
scanstatus__contains	optional	The CDS malware scan status
scanstatus__nin	optional	The CDS malware scan status (not in)
siteids	optional	List of Site IDs to filter by

skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
threatdetectionpolicystatus	optional	Threat Detection Policy
threatdetectionstatus	optional	Threat Detection Status
threatdetectionstatus__contains	optional	The threat detection status
threatdetectionstatus__nin	optional	Threat Detection Status (not in)
versioningenabled	optional	Whether there is versioning enabled or not

Export assets to CSV or JSON

GET /web/api/v2.1/xdr/assets/storage/export

Returns the results for given inventory filter in a CSV or JSON format

Parameters

exportformat	required	Export format
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)

assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)

cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
connectivitystatus	optional	Connectivity
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
data_classification_scan_status__contains	optional	Data classification scan status
data_classification_status__contains	optional	Data classification status
data_types__contains	optional	Data types contains
dataclassificationpolicystatus	optional	Data Classification Policy
dataclassificationscanstatus	optional	Data classification scan status to exclude
dataclassificationstatuses	optional	Data Classification Status
dataclassificationstatuses__nin	optional	Data Classification Status (not in)
datatypes	optional	Data Types
datatypes__nin	optional	Data Types (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
encryptiontype	optional	The encryption type
encryptiontype__nin	optional	The encryption type (not in)
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID

id__in	optional	The ID
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
ispublic	optional	Whether there is public access or not
ispublic__nin	optional	Whether there is public access or not (not in)
limit	optional	Limit number of returned items (1-1000)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
objectcount	optional	The number of objects in the bucket
objectcount__nin	optional	The number of objects in the bucket (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
scannerstatus	optional	Scanner
scanstatus	optional	The CDS malware scan status
scanstatus__contains	optional	The CDS malware scan status
scanstatus__nin	optional	The CDS malware scan status (not in)
siteids	optional	List of Site IDs to filter by

skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
threatdetectionpolicystatus	optional	Threat Detection Policy
threatdetectionstatus	optional	Threat Detection Status
threatdetectionstatus__contains	optional	The threat detection status
threatdetectionstatus__nin	optional	Threat Detection Status (not in)
versioningenabled	optional	Whether there is versioning enabled or not

Inventory Storage Filters

Filter counts

GET /web/api/v2.1/xdr/assets/storage/filters/count

Get filter counts

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)

cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
connectivitystatus	optional	Connectivity
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by

data_classification_scan_status__contains	optional	Data classification scan status
data_classification_status__contains	optional	Data classification status
data_types__contains	optional	Data types contains

Fetch all Unique Tags

GET /web/api/v2.1/xdr/assets/tags

Fetch all tags removing duplicates

Parameters

accountids	optional	List of Account IDs to filter by
category	optional	The category that each resource belongs to
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
groupids	optional	List of Group IDs to filter by
includeparent	optional	Include parent
key__contains	optional	Free-text filter by tag key
limit	optional	Limit number of returned items (1-1000)
query	optional	Query
readonly	optional	Read only
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
source	optional	The source that tag belongs to
value__contains	optional	Free-text filter by tag value

Get tags info of assets by asset id

POST /web/api/v2.1/xdr/assets/fetch-tags

Get tags info for all assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
agentagentversion	optional	The agent version
agentantitamperingstatus	optional	The agent anti tampering status
agentconsoleconnectivity	optional	The agent console connectivity
agentidrconnectivity	optional	The agent idr connectivity
agentoperationalstate	optional	The agent operational state
agentpendingactions	optional	The agent pending actions
agentvssrollbackstatus	optional	The agent VSS rollback status
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)

assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
category	optional	The category that each resource belongs to
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value

cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__notin	optional	The cloud tags key value (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
devicereview	optional	The asset review
devicereview__notin	optional	The asset review (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
groupids	optional	List of Group IDs to filter by
id__contains	optional	The ID

assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP

n		Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
badpasswordtime__between	optional	Bad Password Time
classification	optional	Classification
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value

cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
cn	optional	The LDAP Common Name
cn__contains	optional	The LDAP Common Name
cn__nin	optional	The LDAP Common Name (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
deleted	optional	Whether the AD Entity is deleted or not
deletedtime__between	optional	Deleted Time
department	optional	Department
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
displayname__contains	optional	The Display Name
distinguishedname__contains	optional	The Distinguished Name
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
employeeetype	optional	Employee Type
enabled	optional	Whether the Identity Group is enabled or not

encryptiontype	optional	The encryption type
encryptiontype__nin	optional	The encryption type (not in)
entraidgrouptype	optional	Entra ID Group Type
entraidgrouptype__nin	optional	Entra ID Group Type (not in)
eppunsupportedunkn own	optional	The agent supported or unknown state
eppunsupportedunkno wn__nin	optional	The agent supported or unknown state (not in)
expirationtime__betw een	optional	Expiration Time
firstseendt__between	optional	The first seen date
forest	optional	The Forest Name
forest__contains	optional	The Forest Name
forest__nin	optional	The Forest Name (not in)
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contai ns	optional	The gateway MACs
givenname	optional	Given Name
givenname__contains	optional	Given Name
groupids	optional	List of Group IDs to filter by
grouptype	optional	The Group Type
grouptype__nin	optional	The Group Type (not in)
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__co ntains	optional	AD machine or its groups
identityadmachinedist inguishedname__conta ins	optional	AD machine DN
identityadmachinemem	optional	AD machine groups

bership__contains		
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
isrogues	optional	Whether the instance is a rogue or not
jobtitle	optional	Job Title
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name

k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8sresourceid	optional	The Kubernetes Resource ID
k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
last_modified_time__between	optional	Lock-out Time
lastactivedt__between	optional	The last active date
lastlogontime__between	optional	The Last time of User Login
lastupdatedt__between	optional	The last update date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
lockouttime__between	optional	Lock-out Time
macaddresses__contains	optional	The MAC addresses
mail	optional	The Email Address
mail__contains	optional	The Email Address
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer

manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
objectcategory	optional	The Object Category
objectcategory__nin	optional	The Object Category (not in)
objectclass	optional	The Object Class
objectclass__nin	optional	The Object Class (not in)
objectcount	optional	The number of objects in the bucket
objectcount__nin	optional	The number of objects in the bucket (not in)
objectguid__contains	optional	The Object GUID
objectsid__contains	optional	The Object SID
onpremisesdistinguis hedname	optional	On Premises Distinguished Name
onpremisesdistinguis hedname__contains	optional	
onpremisesdomainna me	optional	On Premises Domain Name
onpremisesdomainnam e__contains	optional	On Premises Distinguished Name
onpremisesimmutablei d	optional	On Premises Immutable Id
onpremiseslastsyncti me__between	optional	On Premises Last Sync Time
onpremisesamaccou ntname	optional	On Premises SAM Account Name

onpremisesamaccountname__contains	optional	On Premises SAM Account Name
onpremisessecurityidentifier	optional	On Premises Security Identifier
onpremisessecurityidentifier__contains	optional	
onpremisesyncenabled	optional	On Premises Sync Enabled
onpremisesuserprincipalname	optional	On Premises User Principal Name
onpremisesuserprincipalname__contains	optional	On Premises User Principal Name
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
othermails	optional	Other Mails
othermails__contains	optional	Other Mails
passwordneverexpire	optional	Whether the password never expires
privileged	optional	Whether the AD Entity is privileged or not
proxyaddresses	optional	Proxy Addresses
proxyaddresses__contains	optional	Proxy Addresses
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)

rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
samaccountname	optional	The SAM Account Name
samaccountname__nin	optional	The SAM Account Name (not in)
scanstatus	optional	The CDS malware scan status
scanstatus__contains	optional	The CDS malware scan status
scanstatus__nin	optional	The CDS malware scan status (not in)
securityenabled	optional	Security Enabled
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
serviceaccount	optional	The Service Account
serviceprincipalname__contains	optional	The Service Principal Name

siteids	optional	List of Site IDs to filter by
state	optional	The state of the instance
state__contains	optional	The state
state__nin	optional	The state of the instance (not in)
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
surname	optional	Surname
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
threatdetectionpolicystatus	optional	Threat Detection Policy
threatdetectionstatus	optional	Threat Detection Status
threatdetectionstatus__contains	optional	The threat detection status
threatdetectionstatus__nin	optional	Threat Detection Status (not in)
udpports	optional	The UDP ports
uniquename	optional	Unique Name
useraccountcontrol	optional	The User Account Control
useraccountcontrol__n	optional	The User Account Control (not in)

in		
userpasswordexpirytimecomputed__between	optional	The User Password Expiry Time
userprincipalname	optional	The User Principal Name
userprincipalname__contains	optional	The User Principal Name
userprincipalname__notin	optional	The User Principal Name (not in)
visibility	optional	Visibility

Body Schema

Name	Description	Required	Value
id__in	List of selected entity ids	false	object
id__nin	List of entity ids to exclude from select_all	false	object

Perform an Action on selected assets/entities

POST /web/api/v2.1/xdr/assets/actions/perform-unified-action

Perform an Action on selected assets/entities

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agegroup	optional	Age Group
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)
agentcustomeridentifier__contains	optional	The customer identifier

agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfree percentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfree percentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfree percentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolume type	optional	The agent disk metrics volume type
agentdiskmetricsvolume type__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylast updateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent Idr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)
agentlocationawareness__contains	optional	The location awareness

agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentsubscribeondbetween	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionstatus	optional	The agent VSS protection status
agentvssprotectionstatus	optional	The agent VSS protection status (not in)

tus__nin		
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffareafreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
badpasswordtime__be	optional	Bad Password Time

tween		
classification	optional	Classification
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
cn	optional	The LDAP Common Name

cn__contains	optional	The LDAP Common Name
cn__nin	optional	The LDAP Common Name (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
deleted	optional	Whether the AD Entity is deleted or not
deletedtime__between	optional	Deleted Time
department	optional	Department
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
displayname__contains	optional	The Display Name
distinguishedname__contains	optional	The Distinguished Name
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
employeetype	optional	Employee Type
enabled	optional	Whether the Identity Group is enabled or not
encryptiontype	optional	The encryption type
encryptiontype__nin	optional	The encryption type (not in)
entraidgrouptype	optional	Entra ID Group Type
entraidgrouptype__nin	optional	Entra ID Group Type (not in)
eppunsupportedunkn	optional	The agent supported or unknown state

own		
eppunsupportedunknow wn__nin	optional	The agent supported or unknown state (not in)
expirationtime__betw een	optional	Expiration Time
firstseendt__between	optional	The first seen date
forest	optional	The Forest Name
forest__contains	optional	The Forest Name
forest__nin	optional	The Forest Name (not in)
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contai ns	optional	The gateway MACs
givenname	optional	Given Name
givenname__contains	optional	Given Name
groupids	optional	List of Group IDs to filter by
grouptype	optional	The Group Type
grouptype__nin	optional	The Group Type (not in)
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__co ntains	optional	AD machine or its groups
identityadmachinedist inguishedname__conta ins	optional	AD machine DN
identityadmachinemem bership__contains	optional	AD machine groups
identityaduser__contai ns	optional	AD user or their groups
identityaduserdisting uishedname__contains	optional	AD user DN

identityadusermembership__contains	optional	AD user groups
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
isrogues	optional	Whether the instance is a rogue or not
jobtitle	optional	Job Title
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name
k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8sresourceid	optional	The Kubernetes Resource ID

k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
last_modified_time__between	optional	Lock-out Time
lastactivedt__between	optional	The last active date
lastlogontime__between	optional	The Last time of User Login
lastupdatedt__between	optional	The last update date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
lockouttime__between	optional	Lock-out Time
macaddresses__contains	optional	The MAC addresses
mail	optional	The Email Address
mail__contains	optional	The Email Address
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset

missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
objectcategory	optional	The Object Category
objectcategory__nin	optional	The Object Category (not in)
objectclass	optional	The Object Class
objectclass__nin	optional	The Object Class (not in)
objectcount	optional	The number of objects in the bucket
objectcount__nin	optional	The number of objects in the bucket (not in)
objectguid__contains	optional	The Object GUID
objectsid__contains	optional	The Object SID
onpremisesdistinguis hedname	optional	On Premises Distinguished Name
onpremisesdistinguis hedname__contains	optional	
onpremisesdomainna me	optional	On Premises Domain Name
onpremisesdomainnam e__contains	optional	On Premises Distinguished Name
onpremisesimmutablei d	optional	On Premises Immutable Id
onpremiseslastsyncti me__between	optional	On Premises Last Sync Time
onpremisesamaccou ntname	optional	On Premises SAM Account Name
onpremisesamaccoun tname__contains	optional	On Premises SAM Account Name
onpremisessecurityiden tifier	optional	On Premises Security Identifier

onpremisessecurityidentifier__contains	optional	
onpremisesyncenabled	optional	On Premises Sync Enabled
onpremisesuserprincipalname	optional	On Premises User Principal Name
onpremisesuserprincipalname__contains	optional	On Premises User Principal Name
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
othermails	optional	Other Mails
othermails__contains	optional	Other Mails
passwordneverexpire	optional	Whether the password never expires
privileged	optional	Whether the AD Entity is privileged or not
proxyaddresses	optional	Proxy Addresses
proxyaddresses__contains	optional	Proxy Addresses
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)

rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
samaccountname	optional	The SAM Account Name
samaccountname__nin	optional	The SAM Account Name (not in)
scanstatus	optional	The CDS malware scan status
scanstatus__contains	optional	The CDS malware scan status
scanstatus__nin	optional	The CDS malware scan status (not in)
securityenabled	optional	Security Enabled
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
serviceaccount	optional	The Service Account
serviceprincipalname__contains	optional	The Service Principal Name
siteids	optional	List of Site IDs to filter by
state	optional	The state of the instance
state__contains	optional	The state
state__nin	optional	The state of the instance (not in)

subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
surname	optional	Surname
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
threatdetectionpolicystatus	optional	Threat Detection Policy
threatdetectionstatus	optional	Threat Detection Status
threatdetectionstatus__contains	optional	The threat detection status
threatdetectionstatus__nin	optional	Threat Detection Status (not in)
udpports	optional	The UDP ports
uniquename	optional	Unique Name
useraccountcontrol	optional	The User Account Control
useraccountcontrol__nin	optional	The User Account Control (not in)
userpasswordexpirytimecomputed__between	optional	The User Password Expiry Time
userprincipalname	optional	The User Principal Name

userprincipalname__contains	optional	The User Principal Name
userprincipalname__nin	optional	The User Principal Name (not in)
visibility	optional	Visibility

id__nin	List of entity ids to exclude from select_all	false	object
payload	Payload	false	

Loads all agent ids for the unified actions

POST /web/api/v2.1/xdr/assets/actions/fetch-agent-ids

Loads all agent ids for the unified actions

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agegroup	optional	Age Group
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)
agentcustomeridentifier__contains	optional	The customer identifier

agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfree percentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfree percentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfree percentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolume type	optional	The agent disk metrics volume type
agentdiskmetricsvolume type__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylast updateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent Idr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)
agentlocationawareness__contains	optional	The location awareness

agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentsubscribeondbetween	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionstatus	optional	The agent VSS protection status
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)

tus__nin		
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffareafreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
badpasswordtime__be	optional	Bad Password Time

tween		
classification	optional	Classification
cloudprovideraccountid	optional	The cloud provider account id
cloudprovideraccountid__contains	optional	The cloud provider account ID
cloudprovideraccountid__nin	optional	The cloud provider account id (not in)
cloudprovideraccountname	optional	The cloud provider account name
cloudprovideraccountname__contains	optional	The cloud provider account name
cloudprovideraccountname__nin	optional	The cloud provider account name (not in)
cloudproviderorganization__contains	optional	The cloud provider organization
cloudproviderorganizationunit__contains	optional	The cloud provider organization unit
cloudproviderprojectid__contains	optional	The cloud provider project ID
cloudprovidersubscriptionid__contains	optional	The cloud provider subscription ID
cloudresourceid__contains	optional	The cloud resource ID
cloudtagskey	optional	The cloud tags key
cloudtagskey__contains	optional	Free-text filter by cloud tag key (supports multiple values)
cloudtagskey__nin	optional	The cloud tags key (not in)
cloudtagskeyvalue	optional	The cloud tags key value
cloudtagskeyvalue__contains	optional	Free-text filter by cloud tag key value (supports multiple values)
cloudtagskeyvalue__nin	optional	The cloud tags key value (not in)
cn	optional	The LDAP Common Name

cn__contains	optional	The LDAP Common Name
cn__nin	optional	The LDAP Common Name (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
deleted	optional	Whether the AD Entity is deleted or not
deletedtime__between	optional	Deleted Time
department	optional	Department
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
displayname__contains	optional	The Display Name
distinguishedname__contains	optional	The Distinguished Name
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
employeetype	optional	Employee Type
enabled	optional	Whether the Identity Group is enabled or not
encryptiontype	optional	The encryption type
encryptiontype__nin	optional	The encryption type (not in)
entraidgrouptype	optional	Entra ID Group Type
entraidgrouptype__nin	optional	Entra ID Group Type (not in)
eppunsupportedunkn	optional	The agent supported or unknown state

own		
eppunsupportedunknow wn__nin	optional	The agent supported or unknown state (not in)
expirationtime__betw een	optional	Expiration Time
firstseendt__between	optional	The first seen date
forest	optional	The Forest Name
forest__contains	optional	The Forest Name
forest__nin	optional	The Forest Name (not in)
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contai ns	optional	The gateway MACs
givenname	optional	Given Name
givenname__contains	optional	Given Name
groupids	optional	List of Group IDs to filter by
grouptype	optional	The Group Type
grouptype__nin	optional	The Group Type (not in)
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__co ntains	optional	AD machine or its groups
identityadmachinedist inguishedname__conta ins	optional	AD machine DN
identityadmachinemem bership__contains	optional	AD machine groups
identityaduser__contai ns	optional	AD user or their groups
identityaduserdisting uishedname__contains	optional	AD user DN

identityadusermembership__contains	optional	AD user groups
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
isrogues	optional	Whether the instance is a rogue or not
jobtitle	optional	Job Title
k8sannotationsunifiedkey__contains	optional	Free-text filter by Kubernetes Annotations key (supports multiple values)
k8sannotationsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Annotations key value (supports multiple values)
k8scluster	optional	The Kubernetes Cluster
k8scluster__contains	optional	The Kubernetes cluster
k8scluster__nin	optional	The Kubernetes Cluster (not in)
k8sclusterid	optional	The Kubernetes Cluster ID
k8sclusterid__contains	optional	Kubernetes Cluster ID
k8slabelsunifiedkey__contains	optional	Free-text filter by Kubernetes Labels key (supports multiple values)
k8slabelsunifiedkeyvalue__contains	optional	Free-text filter by Kubernetes Labels key value (supports multiple values)
k8snamespace	optional	The Kubernetes Namespace Name
k8snamespace__contains	optional	Namespace Name
k8snode	optional	The Kubernetes Node
k8snode__contains	optional	The Kubernetes node
k8snode__nin	optional	The Kubernetes Node (not in)
k8sresourceid	optional	The Kubernetes Resource ID

k8sresourceid__contains	optional	Kubernetes Resource ID
k8srunningonnodes	optional	Running on Nodes
k8srunningonnodes__contains	optional	Running on nodes
k8stype	optional	The Kubernetes Type
k8stype__nin	optional	The Kubernetes Type (not in)
k8sversion	optional	The Kubernetes Version
k8sversion__nin	optional	The Kubernetes Version (not in)
last_modified_time__between	optional	Lock-out Time
lastactivedt__between	optional	The last active date
lastlogontime__between	optional	The Last time of User Login
lastupdatedt__between	optional	The last update date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
lockouttime__between	optional	Lock-out Time
macaddresses__contains	optional	The MAC addresses
mail	optional	The Email Address
mail__contains	optional	The Email Address
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset

missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
objectcategory	optional	The Object Category
objectcategory__nin	optional	The Object Category (not in)
objectclass	optional	The Object Class
objectclass__nin	optional	The Object Class (not in)
objectcount	optional	The number of objects in the bucket
objectcount__nin	optional	The number of objects in the bucket (not in)
objectguid__contains	optional	The Object GUID
objectsid__contains	optional	The Object SID
onpremisesdistinguis hedname	optional	On Premises Distinguished Name
onpremisesdistinguis hedname__contains	optional	
onpremisesdomainna me	optional	On Premises Domain Name
onpremisesdomainnam e__contains	optional	On Premises Distinguished Name
onpremisesimmutablei d	optional	On Premises Immutable Id
onpremiseslastsyncti me__between	optional	On Premises Last Sync Time
onpremisesamaccou ntname	optional	On Premises SAM Account Name
onpremisesamaccoun tname__contains	optional	On Premises SAM Account Name
onpremisessecurityiden tifier	optional	On Premises Security Identifier

onpremisessecurityidentifier__contains	optional	
onpremisesyncenabled	optional	On Premises Sync Enabled
onpremisesuserprincipalname	optional	On Premises User Principal Name
onpremisesuserprincipalname__contains	optional	On Premises User Principal Name
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
othermails	optional	Other Mails
othermails__contains	optional	Other Mails
passwordneverexpire	optional	Whether the password never expires
privileged	optional	Whether the AD Entity is privileged or not
proxyaddresses	optional	Proxy Addresses
proxyaddresses__contains	optional	Proxy Addresses
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)

rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
region	optional	The region
region__contains	optional	The geographical area where cloud resources are hosted
region__nin	optional	The region (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
samaccountname	optional	The SAM Account Name
samaccountname__nin	optional	The SAM Account Name (not in)
scanstatus	optional	The CDS malware scan status
scanstatus__contains	optional	The CDS malware scan status
scanstatus__nin	optional	The CDS malware scan status (not in)
securityenabled	optional	Security Enabled
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
serviceaccount	optional	The Service Account
serviceprincipalname__contains	optional	The Service Principal Name
siteids	optional	List of Site IDs to filter by
state	optional	The state of the instance
state__contains	optional	The state
state__nin	optional	The state of the instance (not in)

subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
surname	optional	Surname
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
threatdetectionpolicystatus	optional	Threat Detection Policy
threatdetectionstatus	optional	Threat Detection Status
threatdetectionstatus__contains	optional	The threat detection status
threatdetectionstatus__nin	optional	Threat Detection Status (not in)
udpports	optional	The UDP ports
uniquename	optional	Unique Name
useraccountcontrol	optional	The User Account Control
useraccountcontrol__nin	optional	The User Account Control (not in)
userpasswordexpirytimecomputed__between	optional	The User Password Expiry Time
userprincipalname	optional	The User Principal Name

userprincipalname__contains	optional	The User Principal Name
userprincipalname__notin	optional	The User Principal Name (not in)
visibility	optional	Visibility

id__in	List of selected entity ids	false	object
id__nin	List of entity ids to exclude from select_all	false	object

Inventory Workstation

Filter counts

GET /web/api/v2.1/xdr/assets/workstation/filters/count

Get workstation filter counts

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)

agentcustomeridentifier__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfreepercentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolumetype	optional	The agent disk metrics volume type
agentdiskmetricsvolumetype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylastupdateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent Idr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)

agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentssubscribeondt__between	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionsta	optional	The agent VSS protection status

tus		
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdifferfreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset

assetstatus__nin	optional	The status of the asset (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
eppunsupportedunknown__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups

identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
lastactivedt__between	optional	The last active date
lastupdatedt__between	optional	The last update date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
macaddresses__contains	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)

missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)

riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
udpports	optional	The UDP ports

Auto Complete

GET /web/api/v2.1/xdr/assets/workstation/filters/autocomplete

Use this command to get values for other fields. When you send this command with input text and a field name, it returns auto-complete suggestions for the field.

Parameters

key	required	Search field key
text	required	Search term text
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)
agentcustomeridentifi	optional	The customer identifier

er__contains		
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfree percentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfree percentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfree percentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolume type	optional	The agent disk metrics volume type
agentdiskmetricsvolume type__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylast updateddt__between	optional	The SDL connectivity last active
agentfulldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent ldr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)

agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentssubscribeondt__between	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionsta	optional	The agent VSS protection status

tus		
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffareafreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset

assetstatus__nin	optional	The status of the asset (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
eppunsupportedunknown__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups

identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
lastactivedt__between	optional	The last active date
lastupdatedt__between	optional	The last update date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
limit	optional	Limit number of returned items
macaddresses__contains	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format

memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type

resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
udpports	optional	The UDP ports

Assets

GET /web/api/v2.1/xdr/assets/workstation

Get inventory workstation assets

Parameters

accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)
agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity

ity		
agentconsolemigration status	optional	The agent console migration status
agentconsolemigration status__nin	optional	The agent console migration status (not in)
agentcustomeridentifi er__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfree percentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreep ercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreep ercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolu metype	optional	The agent disk metrics volume type
agentdiskmetricsvolu metype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__ nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivityl astupdateddt__betwe en	optional	The SDL connectivity last active
agentfulldiskscandt__ between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__ni n	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent ldr connectivity
agentinstallertype	optional	The agent installer type

agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)
agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentsubscribeondt__between	optional	The agent subscribe time

agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshot dt__between	optional	The agent VSS last snapshot date
agentvssprotectionsta tus	optional	The agent VSS protection status
agentvssprotectionsta tus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus __nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus_ _nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffa reafreepercentage__b etween	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__ni n	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to

assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
eppunsupportedunknown__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs

gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups
identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemembership__contains	optional	AD machine groups
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
lastactivedt__between	optional	The last active date
lastupdatedt__between	optional	The last update date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyn	optional	Legacy Identity Policy Name

ame		
limit	optional	Limit number of returned items (1-1000)
macaddresses__contains	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)

ntains		
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.
sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys

tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
udpports	optional	The UDP ports

tagsKeyValue__nin	Tags (not in)	false	string []
tcpPorts	The TCP ports	false	string []
udpPorts	The UDP ports	false	string []

Export assets to CSV or JSON

GET /web/api/v2.1/xdr/assets/workstation/export

Returns the results for given inventory filter in a CSV or JSON format

Parameters

exportformat	required	Export format
accountids	optional	List of Account IDs to filter by
activecoverage	optional	The active coverage for the asset
activecoverage__nin	optional	The active coverage for the asset (not in)
adsenabled	optional	ADS Enabled
agentagentversion	optional	The agent version
agentagentversion__contains	optional	The agent version
agentagentversion__nin	optional	The agent version (not in)

agentantitamperingstatus	optional	The agent anti tampering status
agentantitamperingstatus__nin	optional	The agent anti tampering status (not in)
agentconfigurablenetworkquarantine	optional	Whether the agent can configure network quarantine
agentconfigurablenetworkquarantine__nin	optional	Whether the agent can configure network quarantine (not in)
agentconsoleconnectivity	optional	The agent console connectivity
agentconsolemigrationstatus	optional	The agent console migration status
agentconsolemigrationstatus__nin	optional	The agent console migration status (not in)
agentcustomeridentifier__contains	optional	The customer identifier
agentdecommissioned	optional	Whether the agent is decommissioned
agentdiskencryption	optional	The agent disk encryption
agentdiskmetricsfreepercentage__between	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__gte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsfreepercentage__lte	optional	The agent free disk percentage on any of the disks
agentdiskmetricsvolumetype	optional	The agent disk metrics volume type
agentdiskmetricsvolumetype__nin	optional	The agent disk metrics volume type (not in)
agentdvconnectivity	optional	The connection status between the agent and the SDL service
agentdvconnectivity__nin	optional	The connection status between the agent and the SDL service (not in)
agentdvconnectivitylastupdateddt__between	optional	The SDL connectivity last active

agentfuldiskscandt__between	optional	The agent full disk scan date
agenthaslocalconfig	optional	Whether the agent has local configuration
agenthealthstatus	optional	The agent health status
agenthealthstatus__nin	optional	The agent health status (not in)
agentidrconnectivity	optional	The agent ldr connectivity
agentinstallertype	optional	The agent installer type
agentinstallertype__nin	optional	The agent installer type (not in)
agentlastloggedinuser__contains	optional	The last logged in user
agentlocation	optional	The agent location
agentlocation__nin	optional	The agent location (not in)
agentlocationawareness__contains	optional	The location awareness
agentmissingpermissions	optional	The agent missing permissions
agentmissingpermissions__nin	optional	The agent missing permissions (not in)
agentnetworkstatus	optional	The agent network status
agentnetworkstatus__nin	optional	The agent network status (not in)
agentoperationalstate	optional	The agent operational state
agentoperationalstate__nin	optional	The agent operational state (not in)
agentpendingactions	optional	The agent pending actions
agentpendingactions__nin	optional	The agent pending actions (not in)
agentpendinguninstall	optional	Whether the agent is pending uninstall
agentpendingupgrade	optional	Whether the agent is pending upgrade
agentrangerstatus	optional	The agent network scanner status
agentrangerstatus__nin	optional	The agent network scanner status (not in)

n		
agentrangerversion	optional	The agent network scanner version
agentrangerversion__nin	optional	The agent network scanner version (not in)
agents1agentliveupdatesversion__contains	optional	Live update ID
agentsubscribeondt__between	optional	The agent subscribe time
agentuninstalled	optional	Whether the agent is uninstalled
agentuuid	optional	Match by the agent UUID
agentuuid__contains	optional	The UUID
agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionstatus	optional	The agent VSS protection status
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)
agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffareafreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)

applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items.
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device

domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunkn own	optional	The agent supported or unknown state
eppunsupportedunkno wn__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contai ns	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__co ntains	optional	AD machine or its groups
identityadmachinedist inguishedname__conta ins	optional	AD machine DN
identityadmachinemem bership__contains	optional	AD machine groups
identityaduser__contai ns	optional	AD user or their groups
identityaduserdisting uishedname__contains	optional	AD user DN
identityadusermember ship__contains	optional	AD user groups
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses

isadconnector	optional	Is AD Connector
isdcservice	optional	Is DC Server
lastactivedt__between	optional	The last active date
lastupdatedt__between	optional	The last update date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
limit	optional	Limit number of returned items (1-1000)
macaddresses__contains	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name
names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions

ins		
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by.

sortorder	optional	Sort direction
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
udpports	optional	The UDP ports

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Perform action

POST /web/api/v2.1/xdr/assets/workstation/action

Perform action on selected assets

Parameters

agentvsslastsnapshotdt__between	optional	The agent VSS last snapshot date
agentvssprotectionstatus	optional	The agent VSS protection status
agentvssprotectionstatus__nin	optional	The agent VSS protection status (not in)

agentvssrollbackstatus	optional	The agent VSS rollback status
agentvssrollbackstatus__nin	optional	The agent VSS rollback status (not in)
agentvssservicestatus	optional	The agent VSS service status
agentvssservicestatus__nin	optional	The agent VSS service status (not in)
agentvssvolumesdiffareafreepercentage__between	optional	The agent free VSS volume percentage on any of the volumes
alertseverity	optional	The severity of the alert
alltagskey	optional	User and cloud tag keys
alltagskey__exists	optional	User and cloud tag keys exists
alltagskey__nexists	optional	User and cloud tag keys not exists
alltagskey__nin	optional	User and cloud tag keys (not in)
alltagskeyvalue	optional	User and cloud tags
alltagskeyvalue__nin	optional	User and cloud tags (not in)
applicationname	optional	The name of the application installed on a workstation or a server
architecture	optional	The architecture of the device
architecture__nin	optional	The architecture of the device (not in)
assetcontactemail	optional	Asset Contact Email
assetcontactemail__nin	optional	Asset Contact Email (not in)
assetcriticality	optional	The criticality that each asset belongs to
assetcriticality__nin	optional	The criticality that each asset belongs to (not in)
assetenvironment	optional	The environment that the asset exists in - AWS Azure GCP Active Directory
assetenvironment__nin	optional	The environment that the asset exists in - AWS Azure GCP Active Directory (not in)
assetstatus	optional	The status of the asset
assetstatus__nin	optional	The status of the asset (not in)
corecount	optional	The number of cores
corecount__nin	optional	The number of cores (not in)

countsfor	optional	The columns for which filter count would be returned for
cpu__contains	optional	The CPU
csvfilterid	optional	The ID of the CSV file to filter by
detectedfromsite	optional	The site from which the device was detected
detectedfromsite__nin	optional	The site from which the device was detected (not in)
devicereview	optional	The asset review
devicereview__nin	optional	The asset review (not in)
discoverymethods	optional	The discovery methods
discoverymethods__nin	optional	The discovery methods (not in)
domain	optional	The domain of the device
domain__contains	optional	The domain
domain__nin	optional	The domain of the device (not in)
eppunsupportedunknown	optional	The agent supported or unknown state
eppunsupportedunknown__nin	optional	The agent supported or unknown state (not in)
firstseendt__between	optional	The first seen date
gatewayips__contains	optional	The gateway IPs
gatewaymacs__contains	optional	The gateway MACs
groupids	optional	List of Group IDs to filter by
hostnames__contains	optional	The hostnames
id__contains	optional	The ID
id__in	optional	The ID
identityad__contains	optional	Any AD string
identityadmachine__contains	optional	AD machine or its groups
identityadmachinedistinguishedname__contains	optional	AD machine DN
identityadmachinemem	optional	AD machine groups

bership__contains		
identityaduser__contains	optional	AD user or their groups
identityaduserdistinguishedname__contains	optional	AD user DN
identityadusermembership__contains	optional	AD user groups
imagename__contains	optional	Free-text filter by the image name
infectionstatus	optional	The status alerts of the asset
infectionstatus__nin	optional	The status alerts of the asset (not in)
internalips__contains	optional	The internal IPs
ipaddress__contains	optional	The IP addresses
isadconnector	optional	Is AD Connector
isdcserver	optional	Is DC Server
lastactivedt__between	optional	The last active date
lastupdatedt__between	optional	The last update date
legacy_identity_policy_name__contains	optional	The legacy identity policy name
legacyidentitypolicyname	optional	Legacy Identity Policy Name
macaddresses__contains	optional	The MAC addresses
manufacturer	optional	The manufacturer of the device
manufacturer__contains	optional	The manufacturer
manufacturer__nin	optional	The manufacturer of the device (not in)
memoryreadable	optional	The memory of the device in human readable format
memoryreadable__nin	optional	The memory of the device in human readable format (not in)
missingcoverage	optional	The missing coverage for the asset
missingcoverage__nin	optional	The missing coverage for the asset (not in)
name__contains	optional	The name

names	optional	Name
names__nin	optional	Name (not in)
networkname	optional	The network name
networkname__nin	optional	The network name (not in)
os	optional	The operating system of the device
os__nin	optional	The operating system of the device (not in)
osfamily	optional	The operating system family of the device
osfamily__nin	optional	The operating system family of the device (not in)
osnameversion	optional	The operating system name and version of the device
osnameversion__contains	optional	The OS names and versions
osnameversion__nin	optional	The operating system name and version of the device (not in)
osversion	optional	The operating system version of the device
osversion__contains	optional	The OS versions
osversion__nin	optional	The operating system version of the device (not in)
rangertagkey__contains	optional	Free-text filter by Ranger tag key (supports multiple values)
rangertagkeyvalue__contains	optional	Free-text filter by Ranger tag key value (supports multiple values)
rangertagskey	optional	The ranger tags key
rangertagskey__nin	optional	The ranger tags key (not in)
rangertagskeyvalue	optional	The ranger tags key value
rangertagskeyvalue__nin	optional	The ranger tags key value (not in)
resourcetype	optional	The canonical name for the resource type
resourcetype__contains	optional	The Asset Type
resourcetype__nin	optional	The canonical name for the resource type (not in)
riskfactors	optional	The risk factors associated with the asset
riskfactors__nin	optional	The risk factors associated with the asset (not in)
s1updatedat__between	optional	The Last Seen date and time for the asset

n		
serialnumber	optional	The serial number
serialnumber__contains	optional	The serial number
serialnumber__nin	optional	The serial number (not in)
siteids	optional	List of Site IDs to filter by
subcategory	optional	The sub-category that each resource belongs to
subcategory__nin	optional	The sub-category that each resource belongs to (not in)
subnets__contains	optional	The subnets
surfaces	optional	The Surface that each asset belongs to
surfaces__nin	optional	The Surface that each asset belongs to (not in)
tagskey	optional	Tag Keys
tagskey__contains	optional	Free-text filter by tag key (supports multiple values)
tagskey__exists	optional	Tag Keys exists
tagskey__nexists	optional	Tag Keys not exists
tagskey__nin	optional	Tag Keys (not in)
tagskeyvalue	optional	Tags
tagskeyvalue__contains	optional	Free-text filter by tag key value (supports multiple values)
tagskeyvalue__nin	optional	Tags (not in)
tcpports	optional	The TCP ports
udpports	optional	The UDP ports

Live Updates

Get Agent Merged Updates

GET /web/api/v2.1/content-updates-inventory

Get Agent's merged updates.

Parameters

agentid	required	The ID of the Agent. Example: "225494730938493804".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.

cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
limit	optional	Limit number of returned items (1-1000). Example: "10".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

Get Agent Merged Updates - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Agent Merged Updates - response - data

Name	Description	Required	Value
agentContentUpdateId	Agent content update ID	false	string
appliedAt	Timestamp of when the update was applied	false	string
assetFamilyType	Live update category	false	string
displayName	Live update type name	false	string
liveUpdateId	Live update ID	false	string

Locations

Create Location

POST /web/api/v2.1/locations

Create a location that defines parameters of Agents in a scope filter. Parameters include:

- * ipAddresses - The Agent compares the endpoint active IPv4 or IPv6 addresses to the IP addresses, ranges, and CIDRs defined for the location.
- * dnsServers - The Agent compares the configured DNS servers of the endpoint to the DNS servers defined for the location.
- * dnsLookup - The Agent resolves the FQDN of the endpoint to IPv4 or IPv6 addresses and compares them to the addresses configured in the location setting.
- * networkInterfaces - The Agent determines if the endpoint is connected to the network over a wireless connection. If one connected interface is wireless, the endpoint is considered wireless.
- * serverConnectivity - The Agent reports if it is connected to its Management.

* registryKeys - The Agent compares the endpoint registry keys in HKEY_LOCAL_MACHINE\SOFTWARE with the registry key of the location definition. When you set a location parameter, also set the operator to ALL, NONE, or at least 1.
The serverConnectivity parameter takes "enabled" (true or false) and "value" (connected or disconnected).
The networkInterfaces parameter takes "enabled" (true or false) and "value" (wired or wireless).

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
siteIds	List of Site IDs to filter by	false	string []

Get Locations

GET /web/api/v2.1/locations

Get the locations of Agents in a given scope that match the filter. Agent locations are based on endpoint network parameters (IP, DNS, NIC, Registry Key, or SentinelOne

connection set for all true, at least one true, or none true and applied to a Site, Account, or Global). Agents detect their location settings and apply Firewall Control rules that have Location Aware parameters that match the Agent location. Agents can be in multiple locations at the same time. If an Agent that supports Locations does not detect that it is in a defined location, it uses the Firewall rules assigned to the Fallback location.

Use this command with a filter for "hasFirewallRules" to find Locations that do not have matching Firewall Control rules. The response to this request includes the ID of the location, which you can use in other commands.

Firewall Control and Location Awareness require Control SKU.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
creator__contains	optional	Free-text filter by creator of the location (supports multiple values). Example: "max,mike".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
description__contains	optional	Free-text filter by description (supports multiple values). Example: "out of office".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
hasfirewallrules	optional	Filter by locations with/without firewall rules associated to them
hostname__contains	optional	Free-text filter by hostname (supports multiple values). Example: "sentinelone.com,localhost".
ids	optional	Filter results by location IDs. Example: "225494730938493804,225494730938493915".
ipaddress__contains	optional	Free-text filter by IP address (supports multiple values). Example: "29.213.22.17".
limit	optional	Limit number of returned items (1-1000). Example: "10".
name__contains	optional	Free-text filter by location name (supports multiple values). Example: "office".
registrykey__contains	optional	Free-text filter by registry key (supports multiple values). Example: "system\software,sentinel".
scopename__contains	optional	Free-text filter by scope name (supports multiple values). Example: "my_group,my_site".

scopes	optional	Filter results by scope. Example: "account".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

Name	Description	Required	Value
operator	Logical operator to apply between the set of identifiers	true	enum
identifiers	A list of identifiers	false	see Update Location - response - identifiers table

Update Location - response - identifiers

Name	Description	Required	Value
type	Address type	true	enum
values	IP address, CIDR or range of two addresses. May be either IPv4 or IPv6	false	string []

Update Location - response - ipAddresses

Name	Description	Required	Value
operator	Logical operator to apply between the set of identifiers	true	enum
identifiers	A list of identifiers	false	see Update Location - response - identifiers table

Update Location - response - identifiers

Name	Description	Required	Value
type	Address type	true	enum
values	IP address, CIDR or range of two addresses. May be either IPv4 or IPv6	false	string []

Update Location - response - networkInterfaces

Name	Description	Required	Value
enabled	Use or discard this location identifier	true	boolean
value	Network interface type	false	enum

Update Location - response - registryKeys

Name	Description	Required	Value
key	Registry key path to match. Must start with "HKEY_LOCAL_MACHINE\SOFTWARE\".	true	string
data	Content of the value to match (may be a string or a 64-bit integer, optional)	false	string
value	Value name in the registry key path to match (optional)	false	string

Update Location - response - serverConnectivity

Name	Description	Required	Value
enabled	Use or discard this location identifier	true	boolean
value	Server connectivity status	false	enum

Body Schema

Name	Description	Required	Value
data	Data	true	see Update Location - body - data table

Update Location - body - data

Name	Description	Required	Value
name	Location name (should be unique per scope)	true	string
description	Location description	false	string
dnsLookup	Identify a location by DNS lookup results	false	see Update Location - body - dnsLookup table
dnsServers	Identify a location by DNS servers defined on the endpoint	false	see Update Location - body - dnsServers table
ipAddresses	Identify a location the assigned IP addresses	false	see Update Location - body - ipAddresses table
networkInterfaces	Identify a location by available network interface types	false	see Update Location - body - networkInterfaces table
operator	Logical operator to apply between the set of identifiers	false	enum
registryKeys	Identify a location by a registry key or value	false	see Update Location - body - registryKeys table
serverConnectivity	Identify a location by connectivity to the management server	false	see Update Location - body - serverConnectivity table

Update Location - body - dnsLookup

Name	Description	Required	Value
operator	Logical operator to apply between the set of identifiers	true	enum
identifiers	A list of DNS lookup identifiers	false	see Update Location - body - identifiers table

Update Location - body - identifiers

Name	Description	Required	Value
host	Hostname to resolve	true	string

ip	Resolved IP address	true	string
----	---------------------	------	--------

Update Location - body - dnsServers

Name	Description	Required	Value
operator	Logical operator to apply between the set of identifiers	true	enum
identifiers	A list of identifiers	false	see Update Location - body - identifiers table

Update Location - body - identifiers

Name	Description	Required	Value
type	Address type	true	enum
values	IP address, CIDR or range of two addresses. May be either IPv4 or IPv6	false	string []

Update Location - body - ipAddresses

Name	Description	Required	Value
operator	Logical operator to apply between the set of identifiers	true	enum
identifiers	A list of identifiers	false	see Update Location - body - identifiers table

Update Location - body - identifiers

Name	Description	Required	Value
type	Address type	true	enum
values	IP address, CIDR or range of two addresses. May be either IPv4 or IPv6	false	string []

Update Location - body - networkInterfaces

Name	Description	Required	Value
enabled	Use or discard this location identifier	true	boolean
value	Network interface type	false	enum

Update Location - body - registryKeys

Name	Description	Required	Value
key	Registry key path to match. Must start with "HKEY_LOCAL_MACHINE\SOFTWARE\".	true	string
data	Content of the value to match (may be a string or a 64-bit integer, optional)	false	string
value	Value name in the registry key path to match (optional)	false	string

Update Location - body - serverConnectivity

Name	Description	Required	Value
enabled	Use or discard this location identifier	true	boolean
value	Server connectivity status	false	enum

Log Collection

Get Log Collection rules

GET /web/api/v2.1/log-collection/rules

Parameters

accountids	optional	List of account IDs to filter by. Example:
------------	----------	--

		"225494730938493804,225494730938493915".
agenttype	optional	Agent type. Example: "windows".
agenttypes	optional	List of agent types to filter by. Example: "windows".
collectionpath	optional	Collection path
collectionpath__contains	optional	Free-text filter by rule collection path (supports multiple)
collectionpathorchannel	optional	Collection path or channel
collectionpathorchannel__contains	optional	Free-text filter by rule collection path or channel (supports multiple)
collectionpaths	optional	List of collection paths to filter by.
collectionpathsorchannel	optional	List of collection paths to filter by.
collectiontags	optional	Exact match filter by collection tags (supports multiple)
collectiontags__contains	optional	Free-text filter by rule collection tags (supports multiple)
collectiontype	optional	Collection type. Example: "applicationLog".
collectiontypes	optional	List of collection types to filter by. Example: "applicationLog".
configurationtype	optional	Configuration type. Example: "collectionPath".
configurationtypes	optional	List of configuration types to filter by. Example: "collectionPath".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdby__contains	optional	Free-text filter by rule author (supports multiple)
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
description__contains	optional	Free-text filter by rule description (supports multiple)
enabled	optional	Include enabled, disabled or both. Example: "True,False".
eventids	optional	Exact match filter by event ids (supports multiple)
eventids__contains	optional	Free-text filter by rule eventIds (supports multiple)

excludedids	optional	List of IDs to exclude. Example: "225494730938493804,225494730938493915".
excludedlogs__contains	optional	Free-text filter by rule excluded logs (supports multiple)
excludedtags	optional	Exact match filter by excluded tags (supports multiple)
excludedtags__contains	optional	Free-text filter by rule excluded tags (supports multiple)
groupids	optional	List of group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of IDs to filter by. Example: "225494730938493804,225494730938493915".
includechildren	optional	Return filters from children scope levels
includeparents	optional	Return rules from parent scope levels
limit	optional	Limit number of returned items (1-1000). Example: "10".
logprefix__contains	optional	Free-text filter by rule parser (supports multiple)
name	optional	Name
name__contains	optional	Free-text filter by rule name (supports multiple)
names	optional	List of names to filter by.
parser__contains	optional	Free-text filter by rule parser (supports multiple)
scope	optional	Scope. Example: "group".
scopepath	optional	Scope path
scopepath__contains	optional	Free-text filter by scope path (supports multiple)
scopepaths	optional	List of scope paths to filter by.
scopes	optional	List of scopes to filter by. Example: "group".
siteids	optional	List of site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

state	optional	State
tenant	optional	Indicates a tenant scope request
updatedat__between	optional	Date range for last update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
updatedby__contains	optional	Free-text filter by rule last updater (supports multiple)
welexcludedids__contains	optional	Free-text filter by rule excluded ids (supports multiple)

Get Log Collection rules by agent type

GET /web/api/v2.1/log-collection/rules/{agent_type}

Parameters

accountids	optional	List of account IDs to filter by. Example: "225494730938493804,225494730938493915".
agenttype	optional	Agent type. Example: "windows".
agenttypes	optional	List of agent types to filter by. Example: "windows".
collectionpath	optional	Collection path
collectionpath__contains	optional	Free-text filter by rule collection path (supports multiple)
collectionpathorchannel	optional	Collection path or channel
collectionpathorchannel__contains	optional	Free-text filter by rule collection path or channel (supports multiple)
collectionpaths	optional	List of collection paths to filter by.
collectionpathsorchannel	optional	List of collection paths to filter by.
collectiontags	optional	Exact match filter by collection tags (supports multiple)
collectiontags__contains	optional	Free-text filter by rule collection tags (supports multiple)
collectiontype	optional	Collection type. Example: "applicationLog".
collectiontypes	optional	List of collection types to filter by. Example: "applicationLog".
configurationtype	optional	Configuration type. Example: "collectionPath".
configurationtypes	optional	List of configuration types to filter by. Example: "collectionPath".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__between	optional	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdby__contains	optional	Free-text filter by rule author (supports multiple)
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example:

		"YWdlbnRfaWQ6NTgwMjkzODE=".
description__contains	optional	Free-text filter by rule description (supports multiple)
enabled	optional	Include enabled, disabled or both. Example: "True,False".
eventids	optional	Exact match filter by event Ids (supports multiple)
eventids__contains	optional	Free-text filter by rule eventIds (supports multiple)
excludedids	optional	List of IDs to exclude. Example: "225494730938493804,225494730938493915".
excludedlogs__contains	optional	Free-text filter by rule excluded logs (supports multiple)
excludedtags	optional	Exact match filter by excluded tags (supports multiple)
excludedtags__contains	optional	Free-text filter by rule excluded tags (supports multiple)
groupids	optional	List of group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of IDs to filter by. Example: "225494730938493804,225494730938493915".
includechildren	optional	Return filters from children scope levels
includeparents	optional	Return rules from parent scope levels
limit	optional	Limit number of returned items (1-1000). Example: "10".
logprefix__contains	optional	Free-text filter by rule parser (supports multiple)
name	optional	Name
name__contains	optional	Free-text filter by rule name (supports multiple)
names	optional	List of names to filter by.
parser__contains	optional	Free-text filter by rule parser (supports multiple)
scope	optional	Scope. Example: "group".
scopepath	optional	Scope path
scopepath__contains	optional	Free-text filter by scope path (supports multiple)
scopepaths	optional	List of scope paths to filter by.
scopes	optional	List of scopes to filter by. Example: "group".
siteids	optional	List of site IDs to filter by. Example: "225494730938493804,225494730938493915".

skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
state	optional	State
tenant	optional	Indicates a tenant scope request

Export log collection rules

GET /web/api/v2.1/log-collection/rules/export

Get a CSV file with all log collection rules according to the passed filters

Parameters

accountids	optional	List of account IDs to filter by. Example: "225494730938493804,225494730938493915".
agenttype	optional	Agent type. Example: "windows".
agenttypes	optional	List of agent types to filter by. Example: "windows".
collectionpath	optional	Collection path
collectionpath__contains	optional	Free-text filter by rule collection path (supports multiple)
collectionpathorchannel	optional	Collection path or channel
collectionpathorchannel__contains	optional	Free-text filter by rule collection path or channel (supports multiple)
collectionpaths	optional	List of collection paths to filter by.
collectionpathsorchannel	optional	List of collection paths to filter by.
collectiontags	optional	Exact match filter by collection tags (supports multiple)
collectiontags__contains	optional	Free-text filter by rule collection tags (supports multiple)
collectiontype	optional	Collection type. Example: "applicationLog".
collectiontypes	optional	List of collection types to filter by. Example: "applicationLog".
configurationtype	optional	Configuration type. Example: "collectionPath".
configurationtypes	optional	List of configuration types to filter by. Example: "collectionPath".
createdat__between	optional	Date range for creation time (format: <from_timestamp>-

		<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdby__contains	optional	Free-text filter by rule author (supports multiple)
description__contains	optional	Free-text filter by rule description (supports multiple)
enabled	optional	Include enabled, disabled or both. Example: "True,False".
eventids	optional	Exact match filter by event Ids (supports multiple)
eventids__contains	optional	Free-text filter by rule eventIds (supports multiple)
excludedids	optional	List of IDs to exclude. Example: "225494730938493804,225494730938493915".
excludedlogs__contains	optional	Free-text filter by rule excluded logs (supports multiple)
excludedtags	optional	Exact match filter by excluded tags (supports multiple)
excludedtags__contains	optional	Free-text filter by rule excluded tags (supports multiple)
groupids	optional	List of group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of IDs to filter by. Example: "225494730938493804,225494730938493915".
includechildren	optional	Return filters from children scope levels
includeparents	optional	Return rules from parent scope levels
logprefix__contains	optional	Free-text filter by rule parser (supports multiple)
name	optional	Name
name__contains	optional	Free-text filter by rule name (supports multiple)
names	optional	List of names to filter by.
parser__contains	optional	Free-text filter by rule parser (supports multiple)
scope	optional	Scope. Example: "group".
scopepath	optional	Scope path
scopepath__contains	optional	Free-text filter by scope path (supports multiple)
scopepaths	optional	List of scope paths to filter by.
scopes	optional	List of scopes to filter by. Example: "group".
siteids	optional	List of site IDs to filter by. Example: "225494730938493804,225494730938493915".

state	optional	State
tenant	optional	Indicates a tenant scope request
updatedat__between	optional	Date range for last update time (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
updatedby__contains	optional	Free-text filter by rule last updater (supports multiple)
welexcludedids__contains	optional	Free-text filter by rule excluded ids (supports multiple)

401 - Unauthorized access - please sign in and retry.

Long Running Query

Launch a query

POST /sdl/v2/api/queries

Returns a ``QueryResult`` containing the query identifier, status, and, if the query completes immediately, the full result set in the ``data`` field. If the query is still processing, the ``data`` field will be null. Use the returned query id to poll the query via GET ``/v2/api/queries/{id}`` until results are available.

Log queries have a default limit of 1000 events but by paginating can be used to return essentially unlimited results. Power query results are subject to the standard power query limits on row count and memory consumption. A successful response will also include a ``X-Dataset-Query-Forward-Tag`` header that must be applied to the subsequent Poll and Delete requests for routing.

Authorization is accomplished via a Bearer service token in the request header. Service user tokens are not tied to a specific physical user. Learn more about service users here: <https://community.sentinelone.com/s/article/000005290>.

Due to limitations, clicking "Run on console" may not work as expected, and the "Body Sample" may not be accurate because of polymorphism in the body. Refer to the "Body Schema" instead. Only one set of attributes like ``log`` or ``pq`` should be supplied, depending on the specified ``queryType``.

Response Messages

- 200 - Query launched successfully.
- 400 - Bad Request. The request body is malformed or contains invalid parameters.
- 401 - Unauthorized. Authentication is required or the provided credentials are invalid.
- 403 - Forbidden. The authenticated user does not have permission to execute this query.
- 429 - Too Many Requests. Rate limit exceeded for this user, account, or IP address.
- 500 - Internal Server Error. An unexpected error occurred while processing the request.

Response Schema

Name	Description	Required	Value
cpuUsage	cost of the query execution measured in CPU usage in nanoseconds	false	integer
data	Data object containing results of the query. Note that <code>`PQ`</code> queries may return either <code>`PlotResultData`</code> or <code>`TableResultData`</code> depending on the <code>`resultType`</code> specified in the request.	false	object
error	Error if the query was not executed. If not null, will always have <code>`message`</code> key which will provide the basic error message and an optional <code>`details`</code> field providing further information. If	false	see Launch a query - response - error table

	the query execution was successful, the error field will be null.		
id	The unique query identifier. Used in Poll requests to fetch query status and results.	false	string
resolvedTimeRange	Start time and end time for the query in nanoseconds.	false	see Launch a query - response - resolvedTimeRange table
stepsCompleted	Number of steps completed in this long running query.	false	integer
stepsTotal	Total number of steps to execute.	false	integer

Launch a query - response - error

Name	Description	Required	Value
details	Additional error details	false	object
message	Basic error message	false	string

Launch a query - response - resolvedTimeRange

Name	Description	Required	Value
end		false	integer
start		false	integer

Body Schema

Name	Description	Required	Value
queryType	Specifies the type of query to launch.* `LOG`: Fetch a time-ordered list of matching events, with support for pagination.* `TOP_FACETS`: Find the top facets & facet values for all matching events.* `FACET_VALUES`: Find the top values for a particular facet across all matching events.* `PLOT`: Generate a plot of a numeric function applied to all matching events. The plot can be broken down by values of a certain facet, if needed.* `PQ`: Fetch data using Power Query language. Results can be returned as a table or a plot.* `DISTRIBUTION`: Map, as a histogram, the distribution of values for a facet.	true	enum
accountIds	List of account ids to query. We do not currently support a corresponding sitelds parameter. You can instead supply sitelds as part of the query filter, like `site.id` in	false	string []

	('1383518925981773650', '479559923400588751')'. You can also restrict query space by supplying an appropriately scoped service token in the auth header.		
distribution	Attributes specific to the `DISTRIBUTION` query type.	false	see Launch a query - body - distribution table
endTime	Specifies end of the time range to query, using the same syntax as the Start and End fields in the query UI. You can also supply a simple timestamp, measured in seconds, milliseconds, or nanoseconds since 1/1/1970. The default is to query the last 24 hours. If you specify startTime but not endTime, the query covers 24 hours beginning at the startTime. If you specify endTime but not startTime, the query covers 24 hours ending at the endTime.	false	string
facetValues	Attributes specific to the `FACET_VALUES` query type.	false	see Launch a query - body - facetValues table
log	Attributes specific to the `LOG` query type.	false	see Launch a query - body - log table
plot	Attributes specific to the `PLOT` query type.	false	see Launch a query - body - plot table
pq	Attributes specific to the `PQ` query type.	false	see Launch a query - body - pq table
queryPriority	Specifies the execution priority for this query; defaults to "LOW". Use "LOW" for background operations where a delay of a second or so is acceptable. LOW-priority queries have more generous rate limits.* `HIGH`: Standard query priority for API requests, with tighter rate limits.* `LOW`: Use low priority for scripted queries where a slight delay is acceptable; low priority queries are subject to less rate limiting.	false	enum
startTime	Specifies start of the time range to query, using the same syntax as the Start and End fields in the query	false	string

	UI.You can also supply a simple timestamp, measured in seconds, milliseconds, or nanoseconds since 1/1/1970.The default is to query the last 24 hours. If you specify startTime but not endTime, the query covers 24 hours beginning at the startTime. If you specify endTime but not startTime, the query covers 24 hours ending at the endTime.		
tenant	Controls the scope of the query across accessible data. When set to `true`: - Global admin users: Queries across global scope and all accounts - Account-level users: Queries only within the authorized account - Multi-account users: Queries across all authorized accounts - Site-level users: Queries only within the authorized site - Multi-site users: Queries across all authorized sites Tenant must be set to `false` when specifying scope via `accountIds`.	false	boolean
topFacets	Attributes specific to the `TOP_FACETS` query type.	false	see Launch a query - body - topFacets table

Launch a query - body - distribution

Name	Description	Required	Value
facet	The facet to query and aggregate on. Currently all facet queries will be aggregated using the 'count' function.	false	string
filter	Specifies which events to match, using the same syntax as the Expression field in the query UI. To match all events, omit this field or pass an empty string.	false	string

Launch a query - body - facetValues

Name	Description	Required	Value
determineNumeric	Whether to determine if a value is numeric.	false	boolean
filter	Specifies which events to match, using the same syntax as the Expression field in the query UI. To match all events, omit this field or pass an empty string.	false	string
maxValues	The maximum number of unique values to return per facet for the request.	false	integer
name	Specifies the facet name to get values for.	false	string

Launch a query - body - log

Name	Description	Required	Value
ascending	If true, results are returned in order	false	boolean

	from oldest to newest; if false, results are returned in order from newest to oldest.		
cursor	Cursor returned by a previous `LOG` query, used for pagination. When provided, the query returns events starting with this cursor (inclusive) up to the specified `limit`. This allows retrieval of additional results beyond the default maximum per request (typically 5000). To page further, take the `cursor` value from the last event in the previous response and launch a new query with the same time range and this `cursor`; the API will resume where it left off. Note: The boundary event (the event whose cursor you're using) will be included in the next query's results, so it will appear as a duplicate across consecutive API calls. To avoid duplicates, you can skip the first event in each paginated response after the initial query. If not provided, a request with `ascending=true` starts at the beginning of the specified time range, and with `ascending=false` starts at the end.	false	string
exclusive	When set to `true` and a `cursor` is provided, pagination continues from the event represented by the cursor exclusively (the cursor event will NOT be included). This provides standard pagination behavior without duplicates. This parameter overrides the default inclusive behavior.	false	boolean
filter	Specifies which events to match, using the same syntax as the Expression field in the query UI. To match all events, omit this field or pass an empty string.	false	string
limit	Limits the number of returned log events.	false	integer

Launch a query - body - plot

Name	Description	Required	Value
autoAggregate	When set to true, no matter what function is specified in the expression, the result of this query will include a list of plots with the following aggregations applied: - count - mean - min - max - sum - sumPerSecond - countPerSecond - p10 - p50 - p90 - p95 - p99 - p999	false	boolean
autoAlign	Based on a the time range and a target number of slices, auto aligns the slices to a meaningful boundary.	false	boolean
breakdownFacet	Additional facet to breakdown by.	false	string
expression	Expression to query and filter numeric data.	false	string
filter	Specifies which events to match, using the same syntax as the Expression field in the query UI. To match all events, omit this field or pass an empty string.	false	string
frequency	Clients should set frequency to `HIGH` if the query with the same expression will be repeated. Defaults to `LOW`.	false	enum
slices	Number of parts the time range will be divided into. Cannot be used together with `sliceWidth`.	false	integer
sliceWidth	Width in duration the time range will	false	string

	be divided into. Cannot be used together with `slices`. Supported units: `seconds` or `s`, `minutes` or `m`, `hours` or `h`, `days` or `d`, `weeks` or `w`.		
--	---	--	--

Launch a query - body - pq

Name	Description	Required	Value
query	The power query to execute.	true	string
frequency	Clients should set frequency to `HIGH` if the query with the same expression will be repeated. Defaults to `LOW`.	false	enum
resultType	Specifies the result type of a power query.	false	enum

Launch a query - body - topFacets

Name	Description	Required	Value
determineNumeric	Whether to determine if a value is numeric.	false	boolean
filter	Specifies which events to match, using the same syntax as the Expression field in the query UI. To match all events, omit this field or pass an empty string.	false	string
numFacetsToReturn	Number of facets to return. Before facets are returned, they are sorted by the number of events that have them, and in the event of a tie alphabetically.	false	integer
numValuesToReturnPerFacet	The maximum number of values to return per facet for the request	false	integer

Poll query

GET /sdl/v2/api/queries/{id}

Poll a previously launched query by its unique identifier. Responses will return a `QueryResult`. If the query has not yet completed, the `data` field will be null. Once the query completes, `data` will contain the full result set (up to configured limits). It is recommended to poll every second; queries expire after the configured TTL (default 30 seconds). The `X-Dataset-Query-Forward-Tag` header value from the launch query response must be applied for routing.

Authorization is accomplished via a Bearer service token in the request header. Service tokens are not tied to a specific user. Learn more about service users here: <https://community.sentinelone.com/s/article/000005290>.

Due to limitations, clicking "Run on console" may not work as expected

Parameters

laststepseen	required	The step to start return result from
--------------	----------	--------------------------------------

Response Messages

200 - Results retrieved successfully.

400 - Bad Request. Invalid query parameters.

401 - Unauthorized. Authentication is required or the provided credentials are invalid.

403 - Forbidden. The authenticated user does not have permission to access this query.

404 - Not Found. No launched query found for the combination of query id + current account.

429 - Too Many Requests. Rate limit exceeded for this user, account, or IP address.

500 - Internal Server Error. An unexpected error occurred while processing the request.

Response Schema

Name	Description	Required	Value
cpuUsage	cost of the query execution measured in CPU usage in nanoseconds	false	integer
data	Data object containing results of the query. Note that `PQ` queries may return either `PlotResultData` or `TableResultData` depending on the	false	object

	`resultType` specified in the request.		
error	Error if the query was not executed. If not null, will always have `message` key which will provide the basic error message and an optional `details` field providing further information. If the query execution was successful, the error field will be null.	false	see Poll query - response - error table
id	The unique query identifier. Used in Poll requests to fetch query status and results.	false	string
resolvedTimeRange	Start time and end time for the query in nanoseconds.	false	see Poll query - response - resolvedTimeRange table
stepsCompleted	Number of steps completed in this long running query.	false	integer
stepsTotal	Total number of steps to execute.	false	integer

Poll query - response - error

Name	Description	Required	Value
details	Additional error details	false	object
message	Basic error message	false	string

Poll query - response - resolvedTimeRange

Name	Description	Required	Value
end		false	integer
start		false	integer

Delete query

DELETE /sdl/v2/api/queries/{id}

Remove query from the list of launched queries. Clients are required to call this after their query is complete. Subsequent polls using specified token will return not found response. The `X-Dataset-Query-Forward-Tag` header value from the launch query response must be applied for routing.

Authorization is accomplished via a Bearer service token in the request header. Service tokens are not tied to a specific user. Learn more about service users here: <https://community.sentinelone.com/s/article/000005290>.

Due to limitations, clicking "Run on console" may not work as expected

Response Messages

204 - Query has been removed successfully

400 - Bad Request. Invalid query parameters.

401 - Unauthorized. Authentication is required or the provided credentials are invalid.

403 - Forbidden. The authenticated user does not have permission to delete this query.

404 - Not Found. No launched query found for the specified query id.

429 - Too Many Requests. Rate limit exceeded for this user, account, or IP address.

500 - Internal Server Error. An unexpected error occurred while processing the request.

Marketplace

Delete Application

DELETE /web/api/v2.1/singularity-marketplace/applications

Delete application integration from your Marketplace.

Response Messages

Get Installed Applications

GET /web/api/v2.1/singularity-marketplace/applications

Get the installed Marketplace applications for a scope specified.

Parameters

accountids	optional	Filter results by account id. Example: "225494730938493804,225494730938493915".
applicationcatalogid	optional	Filter results by application catalog id. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only the number of items will be returned.
creator__contains	optional	Free-text filter by application creator (supports multiple values). Example: "Service Pack 1".
cursor	optional	Cursor position returned by the last request.
disablepagination	optional	If true, pagination will be disabled.
id	optional	A list of applications IDs. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".

name__contains	optional	Free-text filter by application name (supports multiple values). Example: "Service Pack 1".
query	optional	Free-text filter to match name or creator.
siteids	optional	Filter results by site id. Example: "225494730938493804,225494730938493915".
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction (asc/desc). Example: "asc".

Network Discovery

Get Network Discovery Table

GET /web/api/v2.1/ranger/table-view

Get the data for each row in the Network Discovery Device Inventory Table. Best practice: Set filters. Each row is a set of parameters that quickly fills the pagination limits.

BEST PRACTICE

Set filters. Each row is a set of parameters that quickly fills the pagination limits.

Parameters

accountids	optional	Single Account ID to filter by. Example: "225494730938493804".
agentids	optional	List of agent ids. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
devicefunction__conta	optional	Free-text filter by device function (supports multiple values).

ins		Example: "security,mobile".
devicereviews	optional	The device review state
devicetype	optional	Device type. Example: "Server/Workstation/...".
devicetypes	optional	Device types
discoverymethods	optional	Discovery methods
domains	optional	Included network domains. Example: "mybusiness,workgroup".
externalip	optional	Search using external IP
externalip__contains	optional	Free-text filter by visible IP (supports multiple values). Example: "192.168.0.1/24,10.1".
firstseen__between	optional	Date range refor first seen(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
firstseen__gt	optional	Devices first seen after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
firstseen__gte	optional	Devices first seen after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
firstseen__lt	optional	Devices first seen before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
firstseen__lte	optional	Devices first seen before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
gatewaymacaddress	optional	A gateway mac address to search for
gatewaymacaddress__contains	optional	Free-text filter by gateway mac address (supports multiple values). Example: "aa:ee:b1".
hostnames	optional	Hostnames
hostnames__contains	optional	Free-text filter by hostname (supports multiple values). Example: "s1_host,SomeHost".
ids	optional	List of device ids. Example: "225494730938493804,225494730938493915".
knownfingerprintingdata	optional	Known fingerprinting data. Example: "Manufacturer".
lastseen__between	optional	Date range for last seen(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".

lastseen__gt	optional	Devices last seen after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastseen__gte	optional	Devices last seen after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastseen__lt	optional	Devices last seen before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastseen__lte	optional	Devices last seen before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
limit	optional	Limit number of returned items (1-1000). Example: "10".
localip	optional	Search using local IP
localip__contains	optional	Free-text filter by IP Address (supports multiple values). Example: "192.168.0.1/24,10.1".
macaddress	optional	A mac address to search for
macaddress__contains	optional	Free-text filter by mac address (supports multiple values). Example: "aa:ee:b1".
managedstate	optional	Is the device managed
managedstates	optional	Is the device managed
manufacturer	optional	Manufacturer of the device or network interface
manufacturer__contains	optional	Free-text filter by manufacturer (supports multiple values). Example: "Company".
networkname	optional	Search using network name
networkname__contains	optional	Free-text filter by network name (supports multiple values). Example: "Office".
osname	optional	Os name
ostype	optional	OS type
ostypes	optional	Included OS types
osversion	optional	Os version
osversion__contains	optional	Free-text filter by OS full name and version (supports multiple values). Example: "Service Pack 1".
period	optional	Period. Example: "latest".
query	optional	Query
siteids	optional	Single Site ID to filter by. Example: "225494730938493804".

sitenames	optional	Included site names. Example: "Office,Test".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
subnetaddress__contains	optional	Free-text filter by Subnet Address (supports multiple values). Example: "192.168.0.1/24,10.1".
tagname__contains	optional	Free-text filter by tag name (supports multiple values). Example: "iot".
tcpports__contains	optional	Free-text filter by tcp port (supports multiple values). Example: "80,24".
udpports__contains	optional	Free-text filter by udp port (supports multiple values). Example: "137,2002".

Response Messages

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Network Discovery Table - response - pagination table
data	Response data	false	see Get Network Discovery Table - response - data table
errors	Errors	false	array

Get Network Discovery Table - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Network Discovery Table - response - data

Name	Description	Required	Value
agentId	The agent id if this is a known managed device	false	string
deviceFunction	Function of the device	false	string
deviceReview	The device review state	false	string
deviceReviewLog	Log of actions for this device	false	see Get Network Discovery Table - response - deviceReviewLog table
deviceType	Role of the device	false	string
discoveryMethods	Methods used to discover the device	false	string []
domain	The domain of the device	false	string
externallp	Main Gateway Visible IP	false	string
fingerprintScore	The confidence for this fingerprinting result	false	integer
firstSeen	Time the device was first seen	false	string
gatewayIpAddress	Main gateway IP address	false	string
gatewayMacAddress	Main gateway MAC address	false	string
hasIdentity	Would we be able to identify this device over time	false	boolean
hasUserLabel	True if it has a user label	false	boolean
hostnames	Array of host names	false	string []
id	Id of the device	false	string

ipAddresses	A list of ip addresses. When it is not combined it is always one element	false	string []
labelUpdatedAt	The date of the last label update	false	string
labelUserName	The user that changed the label	false	string
lastSeen	Time the device was last seen	false	string
localIp	Local ip of the device	false	string
macAddress	Mac address of the device	false	string
managedState	Protection state of the device	false	string
manufacturer	Manufacturer of the device or network interface	false	string
networkName	The network name	false	string
networks	A list of all the networks associated to the device. When it is not combined it is always one element	false	see Get Network Discovery Table - response - networks table
osName	OS Name/Version of the device	false	string
osType	Os Type of the device	false	string
osVersion	OS Version of the device	false	string
previousDeviceFunction	Previous Function of the device if manually changed	false	string
previousOsType	Previous Os Type of the device if manually changed	false	string
previousOsVersion	Previous OS Version of the device if manually changed	false	string
siteName	Site name	false	string
subnetAddress	Main subnet address	false	string
tags	The tags	false	see Get Network Discovery Table - response - tags table
tcpPorts	TCP Ports	false	integer []
udpPorts	UDP Ports	false	integer []

Get Network Discovery Table - response - deviceReviewLog

Name	Description	Required	Value
current		false	string
previous		false	string

reason		false	string
reasonDetails		false	string
updatedAt		false	string
username		false	string

Get Network Discovery Table - response - networks

Name	Description	Required	Value
externallp	Main Gateway Visible IP	false	string
gatewayIpAddress	Main gateway IP address	false	string
gatewayMacAddress	Main gateway MAC address	false	string
ip	The IP of the device in the network	false	string
networkName	The network name	false	string
subnetAddress	Main subnet address	false	string

Get Network Discovery Table - response - tags

Name	Description	Required	Value
id	The tag id	true	string
description	The tag description	false	string
kind	Kind of tag if relevant	false	string
name	The tag name	false	string

Export Network Discovery Data

GET /web/api/v2.1/ranger/report/csv

Export Network Discovery data to csv. You can set filters to get only relevant data. The response sends the csv data as text.

Parameters

accountids	optional	Single Account ID to filter by. Example: "225494730938493804".
agentids	optional	List of agent ids. Example:

		"225494730938493804,225494730938493915".
devicefunction__contains	optional	Free-text filter by device function (supports multiple values). Example: "security,mobile".
devicereviews	optional	The device review state
devicetype	optional	Device type. Example: "Server/Workstation/...".
devicetypes	optional	Device types
discoverymethods	optional	Discovery methods
domains	optional	Included network domains. Example: "mybusiness,workgroup".
externalip	optional	Search using external IP
externalip__contains	optional	Free-text filter by visible IP (supports multiple values). Example: "192.168.0.1/24,10.1".
firstseen__between	optional	Date range for first seen(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
firstseen__gt	optional	Devices first seen after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
firstseen__gte	optional	Devices first seen after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
firstseen__lt	optional	Devices first seen before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
firstseen__lte	optional	Devices first seen before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
gatewaymacaddress	optional	A gateway mac address to search for
gatewaymacaddress__contains	optional	Free-text filter by gateway mac address (supports multiple values). Example: "aa:ee:b1".
hostnames	optional	Hostnames
hostnames__contains	optional	Free-text filter by hostname (supports multiple values). Example: "s1_host,SomeHost".
ids	optional	List of device ids. Example: "225494730938493804,225494730938493915".
knownfingerprintingdata	optional	Known fingerprinting data. Example: "Manufacturer".
lastseen__between	optional	Date range for last seen(format: <from_timestamp>-

		<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
lastseen__gt	optional	Devices last seen after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastseen__gte	optional	Devices last seen after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastseen__lt	optional	Devices last seen before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastseen__lte	optional	Devices last seen before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
localip	optional	Search using local IP
localip__contains	optional	Free-text filter by IP Address (supports multiple values). Example: "192.168.0.1/24,10.1".
macaddress	optional	A mac address to search for
macaddress__contains	optional	Free-text filter by mac address (supports multiple values). Example: "aa:ee:b1".
managedstate	optional	Is the device managed
managedstates	optional	Is the device managed
manufacturer	optional	Manufacturer of the device or network interface
manufacturer__contains	optional	Free-text filter by manufacturer (supports multiple values). Example: "Company".
networkname	optional	Search using network name
networkname__contains	optional	Free-text filter by network name (supports multiple values). Example: "Office".
osname	optional	Os name
ostype	optional	OS type
ostypes	optional	Included OS types
osversion	optional	Os version
osversion__contains	optional	Free-text filter by OS full name and version (supports multiple values). Example: "Service Pack 1".
period	optional	Period. Example: "latest".
query	optional	Query
siteids	optional	Single Site ID to filter by. Example: "225494730938493804".

sitenames	optional	Included site names. Example: "Office,Test".
subnetaddress__contains	optional	Free-text filter by Subnet Address (supports multiple values). Example: "192.168.0.1/24,10.1".
tagname__contains	optional	Free-text filter by tag name (supports multiple values). Example: "iot".
tcpports__contains	optional	Free-text filter by tcp port (supports multiple values). Example: "80,24".
udpports__contains	optional	Free-text filter by udp port (supports multiple values). Example: "137,2002".

Export JSON Raw Data

GET /web/api/v2.1/ranger/{inventory_id}/json/export

Export the raw data for one device, by its ID in the Device Inventory Data. To get the ID, run ranger/table-view (see Get Network Discovery Table). Use this command to get data for Support.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

404 - Not found

Get Network Discovery Settings

GET /web/api/v2.1/ranger/settings

Network Discovery gives full visibility of all devices connected to your network. Network Discovery scans your corporate environment to identify and manage connected devices, even those not protected by or supported by SentinelOne. Network Discovery identifies devices as:

- * Secured - End-user computer or laptop, or server, with a SentinelOne Agent.
- * Unsecured - Endpoint of supported hardware and OS, without an Agent.
- * Unsupported - Hardware or software that are not compatible with the SentinelOne Agent.
- * Unknown - Network Discovery cannot determine if the device is Unsecured or Unsupported.

When you install Windows Agents with Network Discovery, the Agents can become scanners. Selected scanners from networks that you enable for scanning find connected devices with passive and active scan techniques. The scanners send the collected data to Network Discovery on the Management. Network Discovery then runs fingerprinting to identify and classify unique devices and to update the Device Inventory Table in the Management Console. With port scanning, it is important that you understand the legal and ethical considerations and that you document a Network Discovery plan and implementation. See <https://support.sentinelone.com/hc/en-us/articles/360041484913> > Legal Considerations and Proper Implementation.

Requirements: Network Discovery license, Cloud-based Management (not supported for On-Prem), Global user or Account user with scope access to the Account with a Network Discovery license.

Use this command to get the Network Discovery Settings for the Account of the given ID (run "accounts" to get an Account ID). The Response shows if Network Discovery is enabled on the Account, the protocols and ports of the scans, and more:

- * minAgentsInNetworkToScan - To help you determine which networks are corporate, Network Discovery looks at the number of secured endpoints (Agents) in a network. If there are not enough Agents in a network - set by this parameter value - Network Discovery considers the network to be non-corporate and will not scan it.
- * scanOnlyLocalSubnets - If false, Network Discovery scans remote subnets that do not have online Network Discovery scanners. This will create network traffic through the corporate firewall (and between different corporate locations), which can impact network performance.
- * usePeriodicSnapshots - A complete scan includes scanner port scanning and Network Discovery AI analysis of the scanner data to update the Device Inventory Snapshot. If this setting is true, Network Discovery runs a new scan on an interval. If snapshotPeriod is shorter, the data is more accurate. If longer, there is better performance.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get Network Discovery Settings - response - data table
errors	Errors	false	array

Get Network Discovery Settings - response - data

Name	Description	Required	Value
accountId	Account id	false	string
autoEnableNetworks	All networks that match the min agents configuration will be enabled automatically	false	boolean
combineDevices	Combine devices as one among multiple networks	false	boolean
enabled	Is the Network Discovery collection enabled for the account	false	boolean
icmpScan	ICMP scan enabled	false	boolean
mdnsScan	MDNS scan enabled	false	boolean
minAgentsInNetworkToScan	Minimum agents required in a network to be listed as selectable for scan	false	integer
multiScanSsdP	SSDP Multicast scan enabled	false	boolean
networkDecommissionValue	The number of days to archive a network which was not enabled for scan	false	integer
newNetworkInHours	Networks are going to be marked as new for this period	false	integer
rdnsScan	RDNS scan enabled	false	boolean
restrictions	A set of IP addresses that should not be scanned in the specific network	false	see Get Network Discovery Settings - response - restrictions table
scanOnlyLocalSubnets	Scan only local subnets	false	boolean
scopeId	Scope id	false	string
smbScan	SMB scan enabled	false	boolean
snapshotPeriod	Period in minutes for each snapshot	false	integer
snmpScan	SNMP scan enabled	false	boolean
specificPorts	[FUTURE] A set of specific ports allowed to be used as source ports for an active scan	false	see Get Network Discovery Settings - response - specificPorts table
tcpPorts	TCP Ports	false	integer []

tcpPortScan	TCP Port scan enabled	false	boolean
udpPorts	UDP Ports	false	integer []
udpPortScan	UDP Port scan enabled	false	boolean
useFullDnsScan	DNS Full scan enabled	false	boolean
usePeriodicSnapshots	Network Discovery views are generated periodically by the snapshot period	false	boolean
useSpecificPorts	[FUTURE] Use only specific ports defined in specific ports as source ports of active scans	false	boolean

Get Network Discovery Settings - response - restrictions

Name	Description	Required	Value

Network Discovery Self Enablement

Get Self Enablement

GET /web/api/v2.1/ranger/enablement

[DEPRECATED] Use the Update Account, Get Account, Get Sites, or the Update Site Add-ons APIs instead.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
activeagents	optional	The number of non-decommissioned agents in the site
activeagents__between	optional	Agent count (between). Example: "2-8".
activeagents__gt	optional	Agent count (more than)

activeagents__gte	optional	Agent count (more than or equal)
activeagents__lt	optional	Agent count (less than)
activeagents__lte	optional	Agent count (less than or equal)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
id	optional	The enablement id. Example: "225494730938493804".
ids	optional	A list of ids to get. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".
rangerenabled	optional	Network Discovery Enabled true/false
rangerproenabled	optional	[DEPRECATED]. Use rangerEnabled instead. Network Discovery Pro Enabled true/false
roguesenabled	optional	Unprotected Endpoints Discovery Enabled true/false
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
sitename	optional	The site name
sitename__contains	optional	Free-text filter by site name (supports multiple values)
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
tenant	optional	Indicates a tenant scope request

Network Quarantine Control

Get Firewall Rules

GET /web/api/v2.1/firewall-control/{firewall_rule_category}

Get the Firewall Control rules for a scope specified by ID (run "accounts", "sites", "groups", or set "tenant" to "true") that match the filter. The response will be quite long because it includes all the rule properties, thus at least one of these filters is required: action, status, osType, name, or scope ID.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
actions	optional	Return firewall rules with the filtered action. Example: "Allow".
application__contains	optional	Free-text filter by application (supports multiple values)
applications	optional	Return firewall rules with the filtered firewall class.
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__between	optional	Return firewall rules created within this range (inclusive). Example: "1514978764288-1514978999999".
createdat__gt	optional	Return firewall rules created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Return firewall rules created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Return firewall rules created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Return firewall rules created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over

		more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
directions	optional	Return firewall rules with the filtered directions. Example: "any".
disablepagination	optional	If true, all rules for requested scope will be returned
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of ids to filter by. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".
locationids	optional	Filter by associated locations. Example: "225494730938493804,225494730938493915".
name	optional	Return firewall rules with the filtered name.
name__contains	optional	Free-text filter by the Rule name (supports multiple values)
ostypes	optional	Return firewall rules with the filtered os_type. Example: "linux".
protocol__contains	optional	Free-text filter by protocol (supports multiple values)
protocols	optional	Return firewall rules with the filtered protocols.
query	optional	Free text search on name, tag, application, protocol
scopes	optional	Return only firewall rules in this scope. Example: "account".
service__contains	optional	Free-text filter by service (supports multiple values)
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
statuses	optional	Return firewall rules with the filtered status. Example: "Enabled".
tagids	optional	Filter by associated tags. Example: "225494730938493804,225494730938493915".
tagname__contains	optional	Free-text filter by the Tag name (supports multiple values)
tenant	optional	Indicates a tenant scope request

Response Messages

Create Firewall Rule

POST /web/api/v2.1/firewall-control/{firewall_rule_category}

Create a Firewall Control rule for a scope specified by ID (run "accounts", "sites", "groups", or set "tenant" to "true") and specific OS, to allow or block network traffic to matching endpoints.

You can create one clean-up rule, with the Action of Allow or Block and with no other parameters defined explicitly. Make this the default rule at the end of your rule list. Traffic that does not match other rules first will match this rule. If you do not have a clean-up rule to match all traffic, the default Firewall Control behavior is to allow traffic that is not explicitly blocked.

Firewall Control requires Control SKU.

Copy Rules

POST /web/api/v2.1/firewall-control/{firewall_rule_category}/copy-rules

Copy a set of rules to other scopes.

In the filter of the body, enter the properties to define the source. In the data field of the body, define the targets by ID. To get a scope ID, run 'accounts', 'sites', or 'groups'.

Response Messages

Set Location

POST /web/api/v2.1/firewall-control/{firewall_rule_category}/set-location

Set location attributes for a Location Aware Firewall Control rule. These rules are applied by Agents only if the network parameters of the endpoint match the properties of the location definition. To get a Location ID, run "locations".
Firewall Control requires Control SKU.

Response Messages

200 - Success

tenant	Indicates a tenant scope request	false	boolean

Reorder Rules

PUT /web/api/v2.1/firewall-control/{firewall_rule_category}/reorder

Change the order of rules for a scope specified by ID (run "accounts", "sites", or "groups").

The Agent looks at the rules based on their order in the Firewall Control policy, from the top to the bottom. First it goes through the Group rules, then the Site rules, then the Account rules, then the Global rules. When the Agent finds a rule that matches the parameters of the traffic, that rule is applied. The Agent does not continue to the lower rules in the list. Thus, the scope and the order of the rules is important.

Firewall Control requires Control SKU.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Reorder Rules - response - data table

tenant	Indicates a tenant scope request	false	boolean

Reorder Rules - body - data

Name	Description	Required	Value
id	Rule ID	true	string
order	Desired position in the list of rules	true	integer

Get Configuration

GET /web/api/v2.1/firewall-control/{firewall_rule_category}/configuration

Get the Firewall Control configuration for a given scope.

To filter the results for a scope:

* Global - Make sure "tenant" is "true" and no other scope ID is given.

* Account - Make sure "tenant" is "false" and at least one Account ID is given.

* Site - Make sure "tenant" is "false" and at least one Site ID is given.

The response shows if Firewall Control is enabled for the scope, if Location Awareness is enabled, the higher scope from which this scope inherited the configuration, and whether a lower scope inherits this configuration.

Firewall Control requires Control SKU.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
------------	----------	---

groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
tenant	optional	Indicates a tenant scope request

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get Configuration - response - data table
errors	Errors	false	array

Get Configuration - response - data

Name	Description	Required	Value
enabled	Firewall control enabled for the scope	false	boolean
inheritAllFirewallRules	Inherit all the rules and tags from the parent scope. Expands on 'inherits' value.	false	boolean
inheritedFrom	If null it means it is own policy else it tells the ancestor for the policy. For groups options are null/Site/Global, for site options are null/Global.	false	string
inherits	True if rules are decoupled from parent rules	false	boolean
inheritSettings	Inherit firewall settings from parent scope	false	boolean
locationAware	Firewall control supports location awareness for the scope	false	boolean
reportBlocked	Agent should report blocked events	false	boolean
selectedTags	Selected tags	false	string []

Update Configuration

PUT /web/api/v2.1/firewall-control/{firewall_rule_category}/configuration

Change the Firewall Control configuration for a given scope.

To get the ID of a scope, run "accounts", "sites", or "groups". To change the Global configuration, leave the filters empty and set "tenant" to "true". In the Body, you can set if Firewall Control is enabled for the scope, if Location Awareness is enabled, the higher scope from which this scope inherits the configuration ("Global" or a scope ID), whether the lower scopes inherit this configuration, and whether blocked actions are reported.

Firewall Control requires Control SKU.

Export Rules

GET /web/api/v2.1/firewall-control/{firewall_rule_category}/export

Export Firewall Control rules that match the filter to a JSON file from a scope specified by ID (run "accounts", "sites", "groups", or leave the scope empty and set "tenant" to "true") and import them to another scope (with the "import" command).

Firewall Control requires Control SKU.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
actions	optional	Return firewall rules with the filtered action. Example: "Allow".
application__contains	optional	Free-text filter by application (supports multiple values)
applications	optional	Return firewall rules with the filtered firewall class.
createdat__between	optional	Return firewall rules created within this range (inclusive). Example: "1514978764288-1514978999999".
createdat__gt	optional	Return firewall rules created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Return firewall rules created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Return firewall rules created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Return firewall rules created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
directions	optional	Return firewall rules with the filtered directions. Example: "any".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of ids to filter by. Example: "225494730938493804,225494730938493915".
locationids	optional	Filter by associated locations. Example: "225494730938493804,225494730938493915".
name	optional	Return firewall rules with the filtered name.
name__contains	optional	Free-text filter by the Rule name (supports multiple values)
ostypes	optional	Return firewall rules with the filtered os_type. Example: "linux".
protocol__contains	optional	Free-text filter by protocol (supports multiple values)
protocols	optional	Return firewall rules with the filtered protocols.
query	optional	Free text search on name, tag, application, protocol
scopes	optional	Return only firewall rules in this scope. Example: "account".
service__contains	optional	Free-text filter by service (supports multiple values)
siteids	optional	List of Site IDs to filter by. Example:

		"225494730938493804,225494730938493915".
statuses	optional	Return firewall rules with the filtered status. Example: "Enabled".
tagids	optional	Filter by associated tags. Example: "225494730938493804,225494730938493915".
tagname__contains	optional	Free-text filter by the Tag name (supports multiple values)
tenant	optional	Indicates a tenant scope request

Response Messages

actions	Return firewall rules with the filtered action.	false	string []
application__contains	Free-text filter by application (supports multiple values)	false	string []
applications	Return firewall rules with the filtered firewall class.	false	string []
createdAt__between	Return firewall rules created within this range (inclusive)	false	string
createdAt__gt	Return firewall rules created after this timestamp.	false	string
createdAt__gte	Return firewall rules created after or at this timestamp.	false	string
createdAt__lt	Return firewall rules created before this timestamp.	false	string
createdAt__lte	Return firewall rules created before or at this timestamp.	false	string
directions	Return firewall rules with the filtered directions.	false	string []
groupIds	List of Group IDs to filter by	false	string []
ids	List of ids to filter by	false	string []
locationIds	Filter by associated locations	false	string []
name	Return firewall rules with the filtered name.	false	string
name__contains	Free-text filter by the Rule name	false	string []

	(supports multiple values)		
osTypes	Return firewall rules with the filtered os_type.	false	string []
protocol__contains	Free-text filter by protocol (supports multiple values)	false	string []
protocols	Return firewall rules with the filtered protocols.	false	string []
query	Free text search on name, tag, application, protocol	false	string
scopes	Return only firewall rules in this scope	false	string []
service__contains	Free-text filter by service (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
statuses	Return firewall rules with the filtered status.	false	string []
tagIds	Filter by associated tags	false	string []
tagName__contains	Free-text filter by the Tag name (supports multiple values)	false	string []
tenant	Indicates a tenant scope request	false	boolean

Get Protocols

GET /web/api/v2.1/firewall-control/{firewall_rule_category}/protocols

Get a list of protocols that can be used in Firewall Control rules.

Parameters

countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
disablepagination	optional	If true, all rules for requested scope will be returned
limit	optional	Limit number of returned items (1-1000). Example: "10".
query	optional	Full text search on protocols
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000

		items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Protocols - response - pagination table
data	Response data	false	see Get Protocols - response - data table
errors	Errors	false	array

Get Protocols - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Protocols - response - data

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
groupIds	List of Group IDs to filter by	false	string []
name	Description of the protocol	false	string
siteIds	List of Site IDs to filter by	false	string []
tenant	Indicates a tenant scope request	false	boolean
value	Short code identifying the protocol	false	string

Add Rule Tags

POST /web/api/v2.1/firewall-control/{firewall_rule_category}/add-tags

Create a Firewall Rule tag.

Create tags to represent Firewall policies - a set of rules in a specific order. After you create the tag, add rules to it.

Notes:

- * Tags apply to a scope and cannot be linked to rules from different scopes.
- * Tags must be 2 to 256 characters.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value

tenant	Indicates a tenant scope request	false	boolean

Remove Rule Tags

POST /web/api/v2.1/firewall-control/{firewall_rule_category}/remove-tags

Remove firewall tags from rules matching the filter.

Tags represent Firewall policies - a set of rules in a specific order. When you remove a rule with a tag, all scopes that subscribe to the tag get the change.

Response Messages

200 - Success

resourceId	Resource id	false	string

Platform Detection Rules

Get Managed Detection Rules

GET /web/api/v2.1/detection-library/rules

Return Catalog Rules for the given scope

Parameters

accountids	optional	account scope level id. Example: "225494730938493804".
activeresponse	optional	The active response status for the rule.
attacksurfaces	optional	To filter by attack surfaces associated with the rule.
categories	optional	Categories. Example: "Events".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__gte	optional	To filter by created-at greater than or equal to a datetime. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	To filter by created-at less than or equal to a datetime. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
customruleids	optional	custom rule ids. Example: "225494730938493804,225494730938493915".
description__contains	optional	To filter by a substring of the rule description
hidequery	optional	To filter by hideQuery of the rule params. Example: "Shown".
labels	optional	To filter by labels.
limit	optional	Limit number of returned items (1-1000). Example: "10".
mitretactics	optional	To filter by sources associated with the rule.
name__contains	optional	To filter by a substring of the rule name
platformruleids	optional	platform rule ids. Example:

		"225494730938493804,225494730938493915".
query	optional	Free-text filter by All fields(name, description, query content). You can enter multiple values, separated by commas. Example: "Service Pack 1".
s1ql__contains	optional	To filter by a substring of the query content
severities	optional	Severities. Example: "Info".
siteids	optional	site scope level id. Example: "225494730938493804".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
sources	optional	To filter by sources associated with the rule.
statuses	optional	Statuses. Example: "Activating".
tags	optional	To filter by tags.
updatedat__gte	optional	To filter by updated-at greater than or equal to a datetime. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	To filter by updated-at less than or equal to a datetime. Example: "2018-02-27T04:49:26.257525Z".
uselabels	optional	If True, use Labels naming instead of Tags (e.g., "Labels" instead of "Tags", "core" instead of "autoDefault").

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

404 - Managed Detection Rules not found

Get Managed Detection Rules - response - data

Name	Description	Required	Value
status	Enabled (Activated and sends alerts if triggered) or Disabled.	true	enum
activeResponse	The Active Response status of the Rule.	false	boolean
attackSurfaces	The attack surfaces associated with the rule.	false	string []
coolOffSettings	Receive only one alert and suppress additional alerts when a rule is triggered multiple times during the cool-off period. Mitigation actions set in the rule will not be applied to suppressed alerts.	false	see Get Managed Detection Rules - response - coolOffSettings table
correlationParams	Correlation params	false	see Get Managed Detection Rules - response - correlationParams table
createdAt	The time when the rule was created	false	string
createdBy	The vendor who created the rule.	false	string
deletedRuleIds	The associated rule IDs that have been already deleted.	false	string []
description	The rule description	false	string
generatedAlerts	The number of alerts generated by the rule.	false	integer
highestInheritedScopeLevel	The highest scope level the rule inherits from.	false	enum

id	The platform rule ID.	false	string
labels	Labels	false	
lastAlertTime	The time when the last alert was caught	false	string
mitre	The mitre tactics associated with the rule.	false	see Get Managed Detection Rules - response - mitre table
name	The rule name	false	string
networkQuarantine	True if the network quarantine is on.	false	boolean
notDeletedRuleIds	The associated rule IDs that have not been deleted.	false	string []
queryType	Define the query type: Correlation (made of multiple subqueries), Event (single query), or Processes (Deprecated).	false	enum
s1ql	The query	false	string
scheduledParams	Scheduled params	false	see Get Managed Detection Rules - response - scheduledParams table
scopeLevel	The scope level the rule is enabled for.	false	enum
severity	The severity of the rule.	false	enum
sources	The sources associated with the rule.	false	string []
tags	The tags associated with the rule. Tags are used to group rules together.	false	string []
treatAsThreat	The Treat as threat auto response - UNDEFINED/suspicious/malicious	false	enum
updatedAt	The time when the rule was updated	false	string

Get Managed Detection Rules - response - coolOffSettings

Name	Description	Required	Value
renotifyMinutes	The period of time in minutes in which alerts will be suppressed after the rule has been triggered.	true	integer

Get Managed Detection Rules - response - correlationParams

Name	Description	Required	Value
entity	A common entity used to group matching events.	true	enum
matchInOrder	Set to True to require subqueries to match in sequence to trigger an alert.	true	boolean
subQueries	The list of subqueries for the custom detection rule.	false	see Get Managed Detection Rules - response - subQueries table
timeWindow	The period of time in minutes in which subqueries must match to trigger an alert.	false	see Get Managed Detection Rules - response - timeWindow table

Get Managed Detection Rules - response - subQueries

Name	Description	Required	Value
matchesRequired	The number of times a subquery must match.	true	integer
subQuery	A subquery	true	string

Get Managed Detection Rules - response - timeWindow

Name	Description	Required	Value
windowMinutes	The period of time in minutes in which subqueries must match to trigger an alert.	false	enum

Get Managed Detection Rules - response - mitre

Name	Description	Required	Value
tactic	The mitre tactic	false	string
techniques	The mitre techniques	false	see Get Managed Detection Rules - response - techniques table

Get Managed Detection Rules - response - techniques

Name	Description	Required	Value
id	The mitre technique id	false	string
link	The mitre technique link	false	string
title	The mitre technique title	false	string

Get Managed Detection Rules - response - scheduledParams

Name	Description	Required	Value
lookbackWindowMinutes	Sets the evaluation lookback window in minutes. For example, set to 5 evaluates the alert over the past five minutes.	true	integer
query	The PowerQuery to run	true	string
runIntervalMinutes	How often the alert is evaluated, in minutes. If used with coolOffSettings then it must be a denominator of renotifyMinutes. If the lookbackWindowMinutes is less than 60 (1 hour), the minimum is 1 minute. For a window between 1 and 360 (6 hours), 5 minutes. For a window between 360 (6 hours) and 10080 (7 days), 15 minutes. For a window between 10080 (7 days) and 43200 (30 days), 60 minutes.	true	integer
alertPerRow	If True, an alert will be generated for each row detected in the defined lookback window. If False (default), get one alert for all detected events matched in the defined lookback window.	false	boolean
disableStreaksLogic	If True (default), disables streak counting logic for scheduled rules. If False, streak counting logic is enabled.	false	boolean
threshold	Receive an alert only if the number of rows in the result of the query matches the condition in the threshold	false	see Get Managed Detection Rules - response - threshold table

Get Managed Detection Rules - response - threshold

Name	Description	Required	Value
operator	Defines the operator to use in combination with the query and thresholdValue to set the threshold condition for an alert to trigger The default value is Greater	false	enum
value	Defines the threshold value that in combination with operator and the query sets the threshold condition for an alert to be triggered. The default value is 0	false	integer

Get Managed Detection Rules

GET /web/api/v2.1/detection-library/platform-rules

Return Managed Detection Rules for the given scope

Parameters

activeresponse	optional	The active response status for the rule.
attacksurfaces	optional	To filter by attack surfaces associated with the rule.
categories	optional	Categories. Example: "Events".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
description__contains	optional	To filter by a substring of the rule description
excludeids	optional	List of entity ids to exclude from select_all. Example: "225494730938493804,225494730938493915".
hidequery	optional	To filter by hideQuery of the rule params. Example: "Shown".
labels	optional	To filter by labels.
limit	optional	Limit number of returned items (1-1000). Example: "10".
mitretactics	optional	To filter by sources associated with the rule.

platformruleids	optional	platform rule ids. Example: "225494730938493804,225494730938493915".
rulenamesubstring	optional	To filter by a substring of the rule name
s1ql__contains	optional	To filter by a substring of the query content
scopeid	optional	The Account, Site, or Group ID, depending on the scope. Null if the scope is Global. Example: "225494730938493804".
scopelevel	optional	To filter by scope, enter one or more scopes, separated by commas. Example: "group".
severities	optional	Severities. Example: "Info".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sources	optional	To filter by sources associated with the rule.
statuses	optional	Statuses. Example: "Activating".
tags	optional	To filter by tags associated with the rule.

Get Template Detection Rules

GET /web/api/v2.1/detection-library/template-rules

Return Template Detection Rules for the given scope

Parameters

activeresponse	optional	The active response status for the rule.
attacksurfaces	optional	To filter by attack surfaces associated with the rule.
categories	optional	Categories. Example: "Events".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
description__contains	optional	To filter by a substring of the rule description
excludeids	optional	List of entity ids to exclude from select_all. Example: "225494730938493804,225494730938493915".
hidequery	optional	To filter by hideQuery of the rule params. Example: "Shown".
labels	optional	To filter by labels.
limit	optional	Limit number of returned items (1-1000). Example: "10".
mitretactics	optional	To filter by sources associated with the rule.

platformruleids	optional	platform rule ids. Example: "225494730938493804,225494730938493915".
rulenamesubstring	optional	To filter by a substring of the rule name
s1ql__contains	optional	To filter by a substring of the query content
scopeid	optional	The Account, Site, or Group ID, depending on the scope. Null if the scope is Global. Example: "225494730938493804".
scopelevel	optional	To filter by scope, enter one or more scopes, separated by commas. Example: "group".
severities	optional	Severities. Example: "Info".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sources	optional	To filter by sources associated with the rule.
statuses	optional	Statuses. Example: "Activating".
tags	optional	To filter by tags associated with the rule.

Response Messages

data	Response data	false	see Get Template Detection Rules - response - data table
errors	Errors	false	array

Get Template Detection Rules - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Template Detection Rules - response - data

Name	Description	Required	Value
queryType	Define the query type: Correlation (made of multiple subqueries), Event (single query)	true	enum
attackSurfaces	The attack surfaces associated with the rule.	false	string []
coolOffSettings	Receive only one alert and suppress additional alerts when a rule is triggered multiple times during the cool-off period. Mitigation actions set in the rule will not be applied to suppressed alerts.	false	see Get Template Detection Rules - response - coolOffSettings table
correlationParams	Correlation params	false	see Get Template Detection Rules - response - correlationParams table
createdAt	The time when the rule was created	false	string
createdBy	The vendor who created the rule.	false	string
description	The rule description	false	string
id	The platform rule ID.	false	string
inUse	Indicates if user has created at least one rule from this template	false	boolean
mitre	The mitre tactics associated with the rule.	false	see Get Template Detection Rules - response - mitre table
name	The rule name	false	string

s1ql	The query	false	string
scheduledParams	Scheduled params	false	see Get Template Detection Rules - response - scheduledParams table
severity	The severity of the rule.	false	enum
sources	The sources associated with the rule.	false	string []
updatedAt	The time when the rule was updated	false	string

Get Template Detection Rules - response - coolOffSettings

Name	Description	Required	Value
renotifyMinutes	The period of time in minutes in which alerts will be suppressed after the rule has been triggered.	true	integer

Get Template Detection Rules - response - correlationParams

Name	Description	Required	Value
entity	A common entity used to group matching events.	true	enum
matchInOrder	Set to True to require subqueries to match in sequence to trigger an alert.	true	boolean
subQueries	The list of subqueries for the custom detection rule.	false	see Get Template Detection Rules - response - subQueries table
timeWindow	The period of time in minutes in which subqueries must match to trigger an alert.	false	see Get Template Detection Rules - response - timeWindow table

Get Template Detection Rules - response - subQueries

Name	Description	Required	Value
matchesRequired	The number of times a subquery must match.	true	integer
subQuery	A subquery	true	string

Get Template Detection Rules - response - timeWindow

Name	Description	Required	Value
windowMinutes	The period of time in minutes in which subqueries must match to trigger an alert.	false	enum

Get Template Detection Rules - response - mitre

Name	Description	Required	Value
tactic	The mitre tactic	false	string
techniques	The mitre techniques	false	see Get Template Detection Rules - response - techniques table

Get Template Detection Rules - response - techniques

Name	Description	Required	Value
id	The mitre technique id	false	string
link	The mitre technique link	false	string
title	The mitre technique title	false	string

Get Template Detection Rules - response - scheduledParams

Name	Description	Required	Value
lookbackWindowMinutes	Sets the evaluation lookback window in minutes. For example, set to 5 evaluates the alert over the past five minutes.	true	integer
query	The PowerQuery to run	true	string
runIntervalMinutes	How often the alert is evaluated, in minutes. If used with coolOffSettings then it must be a denominator of renotifyMinutes. If the lookbackWindowMinutes is less than	true	integer

	60 (1 hour), the minimum is 1 minute. For a window between 1 and 360 (6 hours), 5 minutes. For a window between 360 (6 hours) and 10080 (7 days), 15 minutes. For a window between 10080 (7 days) and 43200 (30 days), 60 minutes.		
alertPerRow	If True, an alert will be generated for each row detected in the defined lookback window. If False (default), get one alert for all detected events matched in the defined lookback window.	false	boolean
disableStreaksLogic	If True (default), disables streak counting logic for scheduled rules. If False, streak counting logic is enabled.	false	boolean
threshold	Receive an alert only if the number of rows in the result of the query matches the condition in the threshold	false	see Get Template Detection Rules - response - threshold table

Get Template Detection Rules - response - threshold

Name	Description	Required	Value
operator	Defines the operator to use in combination with the query and thresholdValue to set the threshold condition for an alert to trigger The default value is Greater	false	enum
value	Defines the threshold value that in combination with operator and the query sets the threshold condition for an alert to be triggered. The default value is 0	false	integer

Enable a Managed Detection Rule

PUT /web/api/v2.1/detection-library/platform-rules/enable

Enable a Managed Detection Rule creates a new rule and activates it.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

404 - Managed Detection Rule not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Enable a Managed Detection Rule - response - data table
errors	Errors	false	array

Enable a Managed Detection Rule - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
activeResponse	The active response status for the rule.	false	boolean
attackSurfaces	To filter by attack surfaces associated with the rule.	false	string []
categories	Categories	false	string []
description__contains	To filter by a substring of the rule description	false	string
excludelds	List of entity ids to exclude from select_all	false	string []
hideQuery	To filter by hideQuery of the rule params.	false	enum
labels	To filter by labels.	false	string []
mitreTactics	To filter by sources associated with the rule.	false	string []
name__contains	To filter by a substring of the rule name	false	string
networkQuarantine	True if the network quarantine is on.	false	boolean
platformRuleIds	platform rule ids	false	string []
query	Free-text filter by All fields(name, description, query content). You can enter multiple values, separated by commas.	false	string []
ruleNameSubstring	To filter by a substring of the rule name	false	string
s1ql__contains	To filter by a substring of the query content	false	string
scopeld	The Account, Site, or Group ID,	false	string

	depending on the scope. Null if the scope is Global.		
scopeLevel	To filter by scope, enter one or more scopes, separated by commas.	false	enum
severities	Severities	false	string []
sources	To filter by sources associated with the rule.	false	string []
statuses	Statuses	false	string []
tags	To filter by tags associated with the rule.	false	string []
treatAsThreat	Defines the Treat as a threat auto response. Undefined, Suspicious, or Malicious.	false	enum

Disable a Managed Detection Rule

PUT /web/api/v2.1/detection-library/platform-rules/disable

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

404 - Managed Detection Rule not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Disable a Managed Detection Rule - response - data table
errors	Errors	false	array

Disable a Managed Detection Rule - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
activeResponse	The active response status for the rule.	false	boolean
attackSurfaces	To filter by attack surfaces associated with the rule.	false	string []
categories	Categories	false	string []
description__contains	To filter by a substring of the rule description	false	string
excludelds	List of entity ids to exclude from select_all	false	string []
hideQuery	To filter by hideQuery of the rule params.	false	enum
labels	To filter by labels.	false	string []
mitreTactics	To filter by sources associated with the rule.	false	string []
name__contains	To filter by a substring of the rule name	false	string
networkQuarantine	True if the network quarantine is on.	false	boolean
platformRuleIds	platform rule ids	false	string []
query	Free-text filter by All fields(name, description, query content). You can enter multiple values, separated by commas.	false	string []
ruleNameSubstring	To filter by a substring of the rule name	false	string
s1ql__contains	To filter by a substring of the query content	false	string
scopeld	The Account, Site, or Group ID,	false	string

	depending on the scope. Null if the scope is Global.		
scopeLevel	To filter by scope, enter one or more scopes, separated by commas.	false	enum
severities	Severities	false	string []
sources	To filter by sources associated with the rule.	false	string []
statuses	Statuses	false	string []
tags	To filter by tags associated with the rule.	false	string []
treatAsThreat	Defines the Treat as a threat auto response. Undefined, Suspicious, or Malicious.	false	enum

Free-Text Filters

GET /web/api/v2.1/detection-library/rules/free-text-filters

Get a metadata list of the available free-text filters

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Free-Text Filters - response - data table
errors	Errors	false	array

Free-Text Filters - response - data

Name	Description	Required	Value
autoComplete	API path for auto-complete query (if applicable)	false	string
icon	Filter icon	false	string
key	Filter argument key	false	string
title	Filter description	false	string
validation	A regular expression for values validation	false	string

Update settings for Managed Detection Rules

PUT /web/api/v2.1/detection-library/platform-rules/settings

Update settings for Managed Detection Rules

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Update settings for Managed Detection Rules - response - data table
errors	Errors	false	array

Update settings for Managed Detection Rules - response - data

Body Schema

Name	Description	Required	Value
scopeLevel	Scope level.	true	enum
autoDefault	Set to On to enable all auto default Platform Detection Rules. Set to Off to stop auto enabling all future Auto Default Platform Detection Rules.	false	enum
core	Set to On to enable all Core Platform Detection Rules. Set to Off to stop auto enabling all future Core Platform Detection Rules.	false	enum
disableInheritance	Set to true to disable Platform Detection settings inheritance from the parent scope.	false	boolean
emergingThreat	Set to On to auto enable all future Emerging Threat Platform Detection Rules. Set to Off to stop auto enabling all future Emerging Threat Platform Detection Rules.	false	enum
scopeId	The Account or Site ID, depending on the scope. Null if the scope is Global.	false	string
smartDefault	Set to On to enable all smart default Platform Detection Rules. Set to Off to stop auto enabling all future Smart Default Platform Detection Rules.	false	enum

Get settings for Managed Detection Rules

GET /web/api/v2.1/detection-library/platform-rules/settings

Get settings for Managed Detection Rules for the given scope

Parameters

scopelevel	required	Scope level. Example: "group".
scopeid	optional	The Account or Site ID, depending on the scope. Null if the scope is Global. Example: "225494730938493804".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get settings for Managed Detection Rules - response - data table
errors	Errors	false	array

Get settings for Managed Detection Rules - response - data

Name	Description	Required	Value
inheritanceAvailable	Is inheritance configuration available for the provided scope?	true	boolean
scopeLevel	Scope level.	true	enum
autoDefault	Set to On to enable all auto default Platform Detection Rules. Set to Off to stop auto enabling all future Auto Default Platform Detection Rules.	false	enum
autoDefaultCount	Number of rules tagged as auto-default	false	integer
combinedLabelCount	Total number of unique rules with labels (same as combinedTagCount, for frontend compatibility)	false	integer
combinedTagCount	Total number of unique rules with either emergingThreat or autoDefault tags	false	integer
core	Set to On to enable all Core Platform Detection Rules. Set to Off to stop auto enabling all future Core Platform Detection Rules.	false	enum
coreCount	Number of rules tagged as core	false	integer
disableInheritance	Set to true to disable Platform Detection settings inheritance from the parent scope.	false	boolean
emergingThreat	Set to On to auto enable all future Emerging Threat Platform Detection Rules. Set to Off to stop auto enabling all future Emerging Threat Platform Detection Rules.	false	enum
emergingThreatCount	Number of rules tagged as emerging threats	false	integer
scopeId	The Account or Site ID, depending on the scope. Null if the scope is Global.	false	string
smartDefault	Set to On to enable all smart default Platform Detection Rules. Set to Off	false	enum

	to stop auto enabling all future Smart Default Platform Detection Rules.		
--	--	--	--

Get Surfaces

GET /web/api/v2.1/detection-library/surfaces

Get all Surfaces valid for Managed Detection Rules

Response Messages

401 - Unauthorized access - please sign in and retry.

Get Severities

GET /web/api/v2.1/detection-library/severities

Get Severities valid for Managed Detection Rules

Response Messages

401 - Unauthorized access - please sign in and retry.

Get Data Sources

GET /web/api/v2.1/detection-library/data-sources

Get Data Sources valid for Managed Detection Rules

Response Messages

401 - Unauthorized access - please sign in and retry.

Get Statuses

GET /web/api/v2.1/detection-library/statuses

Get all rule statuses valid for Managed Detection Rules

Response Messages

401 - Unauthorized access - please sign in and retry.

Policies

Group Policy

GET /web/api/v2.1/groups/{group_id}/policy

Get the policy of the Group given by ID. To get the ID of a Group, run "groups". See also: Get Policy.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

404 - Policy not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Group Policy - response - data table
errors	Errors	false	array

Group Policy - response - data

Name	Description	Required	Value
agentLoggingOn	True if logging is enabled in the agent	false	boolean
agentNotification	[DEPRECATED] Show end point notification on suspicious.Replaced by 'show_suspicious' in the agent UI section	false	boolean
agentUi	Agent ui	false	see Group Policy - response - agentUi table
agentUiOn	[DEPRECATED] Show/hide Agent UI. Moved inside the agent UI section	false	boolean
allowRemoteShell	True if Remote Shell is enabled for the scope	false	boolean
allowUnprotectByApprovedProcess	Allow Unprotect By Approved Process on/off	false	boolean
antiTamperingOn	Anti tampering on/off	false	boolean
autoDecommissionDays	Automatic decommission period in days	false	integer
autoDecommissionOn	Auto decommission on	false	boolean
autoFileUpload	Automatic file upload configuration	false	see Group Policy - response - autoFileUpload table
autoImmuneOn	Automatic immune on/off - this value must be true since all policies are immune by default	false	boolean
autoMitigationAction	Default action for auto mitigation	false	string
cloudValidationOn	Cloud validation on	false	
createdAt	Timestamp of policy creation	false	string
driftDetectionDelayTime	Drift detection delay time in seconds	false	integer
driverBlocking	Suspicious driver blocking engine on/off	false	boolean
dvAttributesPerEventType	The DV attributes	false	see Group Policy - response - dvAttributesPerEventType table
engines	The engines statuses	false	see Group Policy - response - engines table
forensicsAutoTriggering	Forensics auto triggering configuration	false	see Group Policy - response - forensicsAutoTriggering table
fwForNetworkQuarantineEnabled	True if Firewall Control for Network	false	boolean

	Quarantine is enabled		
identityConfigurationSettings	Identity configuration	false	see Group Policy - response - identityConfigurationSettings table
identityEndpointReporting	Endpoint reporting level	false	enum
identityOn	Identity module on/off	false	boolean
identityReportInterval	Identity telemetry report interval in minutes	false	integer
identityThrottlingInterval	Identity duplicate command consolidation interval in minutes	false	integer
identityUpdateInterval	Identity update interval in minutes	false	integer
informationalAlertsOn	Informational alerts on/off	false	boolean
inheritedFrom	Indicates the parent scope from which this policy is inherited, or 'null' if it is not inherited (modified specifically for the current scope).	false	enum
ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Group Policy - response - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean
isDefault	True if this is the tenant policy	false	boolean
isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean
mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean
networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Group Policy - response - remoteOpsForensics table
remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Group Policy - response - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean

researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first registration	false	boolean
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

Group Policy - response - agentUi

Name	Description	Required	Value
agentUiOn	Agent ui on	false	boolean
contactCompany	Contact company	false	string
contactDirectMessage	Contact direct message	false	string
contactEmail	Contact email	false	string
contactFreeText	Contact free text	false	string
contactOther	Contact other	false	string
contactPhoneNumber	Contact phone number	false	string
contactSupportWebsite	Contact support website	false	string
devicePopUpNotifications	Device pop up notifications	false	boolean
maxEventAgeDays	Max event age days	false	integer
showAgentWarnings	Show agent warnings	false	boolean
showDeviceTab	Show device tab	false	boolean
showQuarantineTab	Show quarantine tab	false	boolean
showSupport	Show support	false	boolean
showSuspicious	Show suspicious	false	boolean
threatPopUpNotifications	Threat pop up notifications	false	boolean

Group Policy - response - autoFileUpload

Name	Description	Required	Value
enabled	Automatic file upload on/off	false	boolean
includeBenignFiles	Upload benign files	false	boolean
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum file size (MB) to upload	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalDiskUsage	Maximum local disk usage (MB) for uploaded files	false	integer
maxLocalDiskUsageLimit	Limit for the maximum local disk usage (MB) for uploaded files	false	integer

Group Policy - response - dvAttributesPerEventType

Name	Description	Required	Value

namedPipeExtended	Named Pipe Extended	false	boolean
openDirectoryActivity	Open Directory Activity	false	boolean
process	Process creation event	false	boolean
profileActivity	Profile Activity	false	boolean
registry	Registry event	false	boolean
scheduledTask	Scheduled task event	false	boolean
smartFileMonitoring	Smart file monitoring	false	boolean
url	loc URI	false	boolean
userSubstitution	User Substitution	false	boolean
windowsEventLogs	Windows Event Log	false	boolean
windowsEventLogsExtended	Windows Event Log Extended	false	boolean

Group Policy - response - remoteOpsForensics

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection process	false	integer
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Group Policy - response - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Update Group Policy

PUT /web/api/v2.1/groups/{group_id}/policy

Change the policy for the Group given by ID. Best practice: Get the policy of the Group before you attempt to change it. See also: [Get Policy](#).

BEST PRACTICE

Get the policy of the Group before you attempt to change it. See also: [Get Policy](#).

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

404 - Group not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Update Group Policy - response - data table
errors	Errors	false	array

Update Group Policy - response - data

Name	Description	Required	Value
agentLoggingOn	True if logging is enabled in the agent	false	boolean
agentNotification	[DEPRECATED] Show end point notification on suspicious.Replaced by 'show_suspicious' in the agent UI section	false	boolean
agentUi	Agent ui	false	see Update Group Policy - response - agentUi table
agentUiOn	[DEPRECATED] Show/hide Agent UI. Moved inside the agent UI section	false	boolean
allowRemoteShell	True if Remote Shell is enabled for the scope	false	boolean
allowUnprotectByApprovedProcess	Allow Unprotect By Approved Process on/off	false	boolean
antiTamperingOn	Anti tampering on/off	false	boolean
autoDecommissionDays	Automatic decommission period in days	false	integer
autoDecommissionOn	Auto decommission on	false	boolean
autoFileUpload	Automatic file upload configuration	false	see Update Group Policy - response - autoFileUpload table
autoImmuneOn	Automatic immune on/off - this value must be true since all policies are immune by default	false	boolean
autoMitigationAction	Default action for auto mitigation	false	string
cloudValidationOn	Cloud validation on	false	
createdAt	Timestamp of policy creation	false	string
driftDetectionDelayTime	Drift detection delay time in seconds	false	integer
driverBlocking	Suspicious driver blocking engine on/off	false	boolean
dvAttributesPerEventType	The DV attributes	false	see Update Group Policy - response - dvAttributesPerEventType table
engines	The engines statuses	false	see Update Group Policy - response - engines table
forensicsAutoTriggering	Forensics auto triggering configuration	false	see Update Group Policy - response - forensicsAutoTriggering table
fwForNetworkQuarantineEnabled	True if Firewall Control for Network	false	boolean

	Quarantine is enabled		
identityConfigurationSettings	Identity configuration	false	see Update Group Policy - response - identityConfigurationSettings table
identityEndpointReporting	Endpoint reporting level	false	enum
identityOn	Identity module on/off	false	boolean
identityReportInterval	Identity telemetry report interval in minutes	false	integer
identityThrottlingInterval	Identity duplicate command consolidation interval in minutes	false	integer
identityUpdateInterval	Identity update interval in minutes	false	integer
informationalAlertsOn	Informational alerts on/off	false	boolean
inheritedFrom	Indicates the parent scope from which this policy is inherited, or 'null' if it is not inherited (modified specifically for the current scope).	false	enum
ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Update Group Policy - response - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean
isDefault	True if this is the tenant policy	false	boolean
isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean
mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean
networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Update Group Policy - response - remoteOpsForensics table
remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Update Group Policy - response - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean

researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first registration	false	boolean
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

Update Group Policy - response - agentUi

Name	Description	Required	Value
agentUiOn	Agent ui on	false	boolean
contactCompany	Contact company	false	string
contactDirectMessage	Contact direct message	false	string
contactEmail	Contact email	false	string
contactFreeText	Contact free text	false	string
contactOther	Contact other	false	string
contactPhoneNumber	Contact phone number	false	string
contactSupportWebsite	Contact support website	false	string
devicePopUpNotifications	Device pop up notifications	false	boolean
maxEventAgeDays	Max event age days	false	integer
showAgentWarnings	Show agent warnings	false	boolean
showDeviceTab	Show device tab	false	boolean
showQuarantineTab	Show quarantine tab	false	boolean
showSupport	Show support	false	boolean
showSuspicious	Show suspicious	false	boolean
threatPopUpNotifications	Threat pop up notifications	false	boolean

Update Group Policy - response - autoFileUpload

Name	Description	Required	Value
enabled	Automatic file upload on/off	false	boolean
includeBenignFiles	Upload benign files	false	boolean
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum file size (MB) to upload	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalDiskUsage	Maximum local disk usage (MB) for uploaded files	false	integer
maxLocalDiskUsageLimit	Limit for the maximum local disk usage (MB) for uploaded files	false	integer

Update Group Policy - response - dvAttributesPerEventType

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	see Update Group Policy - response - autoInstallBrowserExtensions table
behavioralIndicators	Behavioral indicators event	false	see Update Group Policy - response - behavioralIndicators table
commandScripts	Command scripts event	false	see Update Group Policy - response - commandScripts table
crossProcess	Cross process event	false	see Update Group Policy - response - crossProcess table
dataMasking	Data masking	false	see Update Group Policy - response - dataMasking table
dllModuleLoad	DLL module load event	false	see Update Group Policy - response - dllModuleLoad table
dns	Network event - DNS	false	see Update Group Policy - response - dns table
driver	Driver	false	see Update Group Policy - response - driver table
externalDeviceActivity	External Device Activity	false	see Update Group Policy - response - externalDeviceActivity table
file	File event	false	see Update Group Policy - response - file table
ip	Network event - IP	false	see Update Group Policy - response - ip table
login	User login/logout event	false	see Update Group Policy - response - login table
namedPipe	Named Pipe	false	see Update Group Policy - response - namedPipe table

[see Update Group Policy - response - namedPipeExtended table](#)

namedPipeExtended	Named Pipe Extended	false	
openDirectoryActivity	Open Directory Activity	false	see Update Group Policy - response - openDirectoryActivity table
process	Process event	false	see Update Group Policy - response - process table
profileActivity	Profile Activity	false	see Update Group Policy - response - profileActivity table
registry	Registry event	false	see Update Group Policy - response - registry table
scheduledTask	Scheduled task event	false	see Update Group Policy - response - scheduledTask table
smartFileMonitoring	Smart file monitoring	false	see Update Group Policy - response - smartFileMonitoring table
url	URL Actions event	false	see Update Group Policy - response - url table
userSubstitution	User Substitution	false	see Update Group Policy - response - userSubstitution table
windowsEventLogs	Windows Event Log	false	see Update Group Policy - response - windowsEventLogs table
windowsEventLogsExtended	Windows Event Log Extended	false	see Update Group Policy - response - windowsEventLogsExtended table

Update Group Policy - response - autoInstallBrowserExtensions

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	boolean

Update Group Policy - response - behavioralIndicators

Name	Description	Required	Value
dvEventTypeBehavioralIndicators	Behavioral indicators event	false	boolean

Update Group Policy - response - commandScripts

Name	Description	Required	Value
dvEventTypeCommandScripts	Command scripts event	false	boolean

Update Group Policy - response - crossProcess

Name	Description	Required	Value
------	-------------	----------	-------

dvEventTypeCrossProcessDuplicateProcess	Duplicate Process Event Type	false	boolean
dvEventTypeCrossProcessDuplicateThread	Duplicate Thread Event Type	false	boolean
dvEventTypeCrossProcessOpenProcesses	Open Process Event Type	false	boolean
dvEventTypeCrossProcessRemoteThread	Remote Thread Event Type	false	boolean

Update Group Policy - response - dataMasking

Name	Description	Required	Value
dataMasking	Data masking	false	boolean

Update Group Policy - response - dllModuleLoad

Name	Description	Required	Value
dvEventTypeDllModuleLoad	DLL module load event	false	boolean

Update Group Policy - response - dns

Name	Description	Required	Value
dvEventTypeDns	Network event - DNS	false	boolean
dvEventTypeExtendedDns	Extended DNS event	false	boolean

Update Group Policy - response - driver

Name	Description	Required	Value
dvEventTypeDriverLoad	Driver Load	false	boolean

Update Group Policy - response - externalDeviceActivity

Name	Description	Required	Value
dvEventTypeExternalDeviceConnect	External Device Connect Event Type	false	boolean
dvEventTypeExternalDeviceDisconnect	External Device Disconnect Event Type	false	boolean

Update Group Policy - response - file

Name	Description	Required	Value
dvEventTypeFileCreation	File Creation Event Type	false	boolean
dvEventTypeFileDeletion	File Deletion Event Type	false	boolean
dvEventTypeFileModification	File Modification Event Type	false	boolean
dvEventTypeFileRename	File Rename Event Type	false	boolean
fullDiskScan	File Scan Event Type	false	boolean

Update Group Policy - response - ip

Name	Description	Required	Value
dvEventTypeIpConnect	IP Connect Event Type	false	boolean
dvEventTypeIpListen	IP Listen Event Type	false	boolean

Update Group Policy - response - login

Name	Description	Required	Value
dvEventTypeLoginLoggedIn	User Login Event Type	false	boolean
dvEventTypeLoginLoggedOut	User Logout Event Type	false	boolean

Update Group Policy - response - namedPipe

Name	Description	Required	Value
dvEventTypeNamedPipeConnection	Named Pipe Connection Event Type	false	boolean

dvEventTypeNamedPipeCreation	Named Pipe Creation Event Type	false	boolean
------------------------------	--------------------------------	-------	---------

Update Group Policy - response - namedPipeExtended

Name	Description	Required	Value
namedPipeExtended	Named Pipe Connection Extended Event Type	false	boolean

Update Group Policy - response - openDirectoryActivity

Name	Description	Required	Value
dvEventTypeOpenDirectoryAddAttributeValue	Add Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryAddMemberToGroup	Add Member to Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateGroup	Create Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateUser	Create User Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteGroup	Delete Group Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteUser	Delete User Event Type	false	boolean
dvEventTypeOpenDirectoryDisableUser	Disable User Event Type	false	boolean
dvEventTypeOpenDirectoryEnableUser	Enable User Event Type	false	boolean
dvEventTypeOpenDirectoryModifyPassword	Modify Password Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveAttributeValue	Remove Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveMemberFromGroup	Remove Member from Group Event Type	false	boolean
dvEventTypeOpenDirectorySetAttributeValues	Set Attribute Values Event Type	false	boolean

dvEventTypeOpenDirectorySetMembersOfGroup	Set Members of Group Event Type	false	boolean
---	---------------------------------	-------	---------

Update Group Policy - response - process

Name	Description	Required	Value
dvEventTypeProcessCreation	Process Creation Event Type	false	boolean
dvEventTypeProcessExit	Process Exit Event Type	false	boolean
dvEventTypeProcessModification	Process Termination Event Type	false	boolean

Update Group Policy - response - profileActivity

Name	Description	Required	Value
dvEventTypeProfileAddition	Profile Addition Event Type	false	boolean
dvEventTypeProfileRemoval	Profile Removal Event Type	false	boolean

Update Group Policy - response - registry

Name	Description	Required	Value
dvEventTypeRegistryKeyCreated	Registry Key Created Event Type	false	boolean
dvEventTypeRegistryKeyDelete	Registry Key Delete Event Type	false	boolean
dvEventTypeRegistryKeyExport	Registry Key Export Event Type	false	boolean
dvEventTypeRegistryKeyImport	Registry Key Import Event Type	false	boolean
dvEventTypeRegistryKeyRename	Registry Key Rename Event Type	false	boolean
dvEventTypeRegistryKeySecurityChanged	Registry Key Security Changed Event Type	false	boolean
dvEventTypeRegistryValueCreated	Registry Value Crated Event Type	false	boolean
dvEventTypeRegistryValueDeleted	Registry Value Deleted Event Type	false	boolean
dvEventTypeRegistryValueModified	Registry Value Modified Event Type	false	boolean

Update Group Policy - response - scheduledTask

Name	Description	Required	Value
dvEventTypeScheduledTaskDelete	Scheduled Task Delete Event Type	false	boolean
dvEventTypeScheduledTaskRegister	Scheduled Task Register Event Type	false	boolean
dvEventTypeScheduledTaskStart	Scheduled Task Start Event Type	false	boolean
dvEventTypeScheduledTaskTrigger	Scheduled Task Trigeer Event Type	false	boolean
dvEventTypeScheduledTaskUpdate	Scheduled Task Update Event Type	false	boolean

Update Group Policy - response - smartFileMonitoring

Name	Description	Required	Value
smartFileMonitoring	Smart file monitoring	false	boolean

Update Group Policy - response - url

Name	Description	Required	Value
dvEventTypeUrl	URL Actions event	false	boolean

Update Group Policy - response - userSubstitution

Name	Description	Required	Value
dvEventTypeSu	su Event Type	false	boolean
dvEventTypeSudo	sudo Event Type	false	boolean

Update Group Policy - response - windowsEventLogs

Name	Description	Required	Value
dvEventTypeWindowsEventLogCreation	Windows Event Log Creation Event Type	false	boolean

Update Group Policy - response - windowsEventLogsExtended

Name	Description	Required	Value
windowsEventLogsExtended	Windows Event Log Extended Event Type	false	boolean

Update Group Policy - response - engines

Name	Description	Required	Value
applicationControl	application control	false	enum
applicationDetection	application detection	false	enum
dataFiles	data files	false	enum
driftDetection	drift detection	false	enum
executables	executables	false	enum
exploits	exploits	false	enum
idr	idr	false	enum
lateralMovement	lateral movement	false	enum
networkProtection	network protection	false	enum
penetration	penetration	false	enum
preExecution	on-write	false	enum
preExecutionSuspicious	pre execution suspicious	false	enum
pup	potentially unwanted applications (PUP)	false	enum
remoteShell	remote shell	false	enum
reputation	reputation	false	enum

Update Group Policy - response - forensicsAutoTriggering

Name	Description	Required	Value
linuxEnabled	True if linux forensics is enabled	false	boolean
linuxProfileId	The profile id for the linux forensics	false	string
linuxProfileName	The profile name for the linux forensics	false	string
macosEnabled	True if macos forensics is enabled	false	boolean

macosProfileId	The profile id for the macos forensics	false	string
macosProfileName	The profile name for the macos forensics	false	string
windowsEnabled	True if windows forensics is enabled	false	boolean
windowsProfileId	The profile id for the windows forensics	false	string
windowsProfileName	The profile name for the windows forensics	false	string

Update Group Policy - response - identityConfigurationSettings

Name	Description	Required	Value
identityMaxCpuThreshold	Identity maximum CPU threshold	false	integer
identityMaxDefinedMemoryLimit	Identity maximum defined memory limit in MB	false	integer
identityMaxMemoryLimit	Identity maximum memory limit in MB	false	integer
identityMaxMemoryUsage	Identity maximum memory usage	false	integer
identityThresholdMonitoring	True if Identity threshold monitoring is enabled	false	boolean

Update Group Policy - response - iocAttributes

Name	Description	Required	Value
autoInstallBrowserExtensions	Update auto install browser extensions	false	boolean
behavioralIndicators	Update behavioral indicators	false	boolean
commandScripts	Update command scripts	false	boolean
crossProcess	Update cross process	false	boolean
dataMasking	Update data masking	false	boolean
dllModuleLoad	Update DLL module load	false	boolean
dns	Network event - DNS	false	boolean
driver	Driver	false	boolean

externalDeviceActivity	External Device Activity	false	boolean
fds	Full disk scan	false	boolean
file	File event	false	boolean
ip	Network event - IP	false	boolean
login	User login/logout event	false	boolean
namedPipe	Named Pipe	false	boolean
namedPipeExtended	Named Pipe Extended	false	boolean
openDirectoryActivity	Open Directory Activity	false	boolean
process	Process creation event	false	boolean
profileActivity	Profile Activity	false	boolean
registry	Registry event	false	boolean
scheduledTask	Scheduled task event	false	boolean
smartFileMonitoring	Smart file monitoring	false	boolean
url	loc URI	false	boolean
userSubstitution	User Substitution	false	boolean
windowsEventLogs	Windows Event Log	false	boolean
windowsEventLogsExtended	Windows Event Log Extended	false	boolean

Update Group Policy - response - remoteOpsForensics

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection process	false	integer
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Update Group Policy - response - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Update Group Policy - body - data table

Update Group Policy - body - data

Name	Description	Required	Value
agentLoggingOn	True if logging is enabled in the agent	false	boolean
agentNotification	[DEPRECATED] Show end point notification on suspicious.Replaced by 'show_suspicious' in the agent UI section	false	boolean
agentUi	Agent ui	false	see Update Group Policy - body - agentUi table
agentUiOn	[DEPRECATED] Show/hide Agent UI. Moved inside the agent UI section	false	boolean
allowRemoteShell	True if Remote Shell is enabled for the scope	false	boolean
allowUnprotectByApprovedProcess	Allow Unprotect By Approved Process on/off	false	boolean
antiTamperingOn	Anti tampering on/off	false	boolean
autoDecommissionDays	Automatic decommission period in days	false	integer
autoDecommissionOn	Auto decommission on	false	boolean
autoFileUpload	Automatic file upload configuration	false	see Update Group Policy - body - autoFileUpload table
autoImmuneOn	Automatic immune on/off - this value must be true since all policies are immune by default	false	boolean
autoMitigationAction	Default action for auto mitigation	false	string
cloudValidationOn	Cloud validation on	false	
createdAt	Timestamp of policy creation	false	string
driftDetectionDelayTime	Drift detection delay time in seconds	false	integer
driverBlocking	Suspicious driver blocking engine on/off	false	boolean
dvAttributesPerEventType	The DV attributes	false	see Update Group Policy - body - dvAttributesPerEventType table
engines	The engines statuses	false	see Update Group Policy - body - engines table
forensicsAutoTriggering	Forensics auto triggering configuration	false	see Update Group Policy - body - forensicsAutoTriggering table
identityConfigurationSettings	Identity configuration	false	see Update Group Policy - body - identityConfigurationSettings table

identityEndpointReporting	Endpoint reporting level	false	enum
identityOn	Identity module on/off	false	boolean
identityReportInterval	Identity telemetry report interval in minutes	false	integer
identityThrottlingInterval	Identity duplicate command consolidation interval in minutes	false	integer
identityUpdateInterval	Identity update interval in minutes	false	integer
informationalAlertsOn	Informational alerts on/off	false	boolean
inheritedFrom	Indicates the parent scope from which this policy is inherited, or 'null' if it is not inherited (modified specifically for the current scope).	false	enum
ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Update Group Policy - body - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean
isDefault	True if this is the tenant policy	false	boolean
isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean
mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean
networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Update Group Policy - body - remoteOpsForensics table
remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Update Group Policy - body - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean
researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first	false	boolean

	registration		
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

Update Group Policy - body - agentUi

Name	Description	Required	Value

networkProtection	network protection	false	enum
penetration	penetration	false	enum
preExecution	on-write	false	enum
preExecutionSuspicious	pre execution suspicious	false	enum
pup	potentially unwanted applications (PUP)	false	enum
remoteShell	remote shell	false	enum
reputation	reputation	false	enum

Update Group Policy - body - forensicsAutoTriggering

Name	Description	Required	Value
linuxEnabled	True if linux forensics is enabled	false	boolean
linuxProfileId	The profile id for the linux forensics	false	string
linuxProfileName	The profile name for the linux forensics	false	string
macosEnabled	True if macos forensics is enabled	false	boolean

macosProfileId	The profile id for the macos forensics	false	string
macosProfileName	The profile name for the macos forensics	false	string
windowsEnabled	True if windows forensics is enabled	false	boolean
windowsProfileId	The profile id for the windows forensics	false	string
windowsProfileName	The profile name for the windows forensics	false	string

Update Group Policy - body - identityConfigurationSettings

Name	Description	Required	Value
identityMaxCpuThreshold	Identity maximum CPU threshold	false	integer
identityMaxDefinedMemoryLimit	Identity maximum defined memory limit in MB	false	integer
identityMaxMemoryLimit	Identity maximum memory limit in MB	false	integer
identityMaxMemoryUsage	Identity maximum memory usage	false	integer
identityThresholdMonitoring	True if Identity threshold monitoring is enabled	false	boolean

Update Group Policy - body - iocAttributes

Name	Description	Required	Value
autoInstallBrowserExtensions	Update auto install browser extensions	false	boolean
behavioralIndicators	Update behavioral indicators	false	boolean
commandScripts	Update command scripts	false	boolean
crossProcess	Update cross process	false	boolean
dataMasking	Update data masking	false	boolean
dllModuleLoad	Update DLL module load	false	boolean
dns	Network event - DNS	false	boolean
driver	Driver	false	boolean

externalDeviceActivity	External Device Activity	false	boolean
fds	Full disk scan	false	boolean
file	File event	false	boolean
ip	Network event - IP	false	boolean
login	User login/logout event	false	boolean
namedPipe	Named Pipe	false	boolean
namedPipeExtended	Named Pipe Extended	false	boolean
openDirectoryActivity	Open Directory Activity	false	boolean
process	Process creation event	false	boolean
profileActivity	Profile Activity	false	boolean
registry	Registry event	false	boolean
scheduledTask	Scheduled task event	false	boolean
smartFileMonitoring	Smart file monitoring	false	boolean
url	loc URI	false	boolean
userSubstitution	User Substitution	false	boolean
windowsEventLogs	Windows Event Log	false	boolean
windowsEventLogsExtended	Windows Event Log Extended	false	boolean

Update Group Policy - body - remoteOpsForensics

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection process	false	integer
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Update Group Policy - body - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Site Policy

GET /web/api/v2.1/sites/{site_id}/policy

Get the policy of the Site given by ID. To get the ID of a Site, run "sites". See also: Get Policy.

userSubstitution	User Substitution	false	see Update Site Policy - response - userSubstitution table
windowsEventLogs	Windows Event Log	false	see Update Site Policy - response - windowsEventLogs table
windowsEventLogsExtended	Windows Event Log Extended	false	see Update Site Policy - response - windowsEventLogsExtended table

Update Site Policy - response - autoInstallBrowserExtensions

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	boolean

Update Site Policy - response - behavioralIndicators

Name	Description	Required	Value
dvEventTypeBehavioralIndicators	Behavioral indicators event	false	boolean

Update Site Policy - response - commandScripts

Name	Description	Required	Value
dvEventTypeCommandScripts	Command scripts event	false	boolean

Update Site Policy - response - crossProcess

Name	Description	Required	Value
------	-------------	----------	-------

dvEventTypeCrossProcessDuplicateProcess	Duplicate Process Event Type	false	boolean
dvEventTypeCrossProcessDuplicateThread	Duplicate Thread Event Type	false	boolean
dvEventTypeCrossProcessOpenProcesses	Open Process Event Type	false	boolean
dvEventTypeCrossProcessRemoteThread	Remote Thread Event Type	false	boolean

Update Site Policy - response - dataMasking

Name	Description	Required	Value
dataMasking	Data masking	false	boolean

Update Site Policy - response - dllModuleLoad

Name	Description	Required	Value
dvEventTypeDllModuleLoad	DLL module load event	false	boolean

Update Site Policy - response - dns

Name	Description	Required	Value
dvEventTypeDns	Network event - DNS	false	boolean
dvEventTypeExtendedDns	Extended DNS event	false	boolean

Update Site Policy - response - driver

Name	Description	Required	Value
dvEventTypeDriverLoad	Driver Load	false	boolean

Update Site Policy - response - externalDeviceActivity

Name	Description	Required	Value
dvEventTypeExternalDeviceConnect	External Device Connect Event Type	false	boolean
dvEventTypeExternalDeviceDisconnect	External Device Disconnect Event Type	false	boolean

Update Site Policy - response - file

Name	Description	Required	Value
dvEventTypeFileCreation	File Creation Event Type	false	boolean
dvEventTypeFileDeletion	File Deletion Event Type	false	boolean
dvEventTypeFileModification	File Modification Event Type	false	boolean
dvEventTypeFileRename	File Rename Event Type	false	boolean
fullDiskScan	File Scan Event Type	false	boolean

Update Site Policy - response - ip

Name	Description	Required	Value
dvEventTypeIpConnect	IP Connect Event Type	false	boolean
dvEventTypeIpListen	IP Listen Event Type	false	boolean

Update Site Policy - response - login

Name	Description	Required	Value
dvEventTypeLoginLoggedIn	User Login Event Type	false	boolean
dvEventTypeLoginLoggedOut	User Logout Event Type	false	boolean

Update Site Policy - response - namedPipe

Name	Description	Required	Value
dvEventTypeNamedPipeConnection	Named Pipe Connection Event Type	false	boolean

dvEventTypeNamedPipeCreation	Named Pipe Creation Event Type	false	boolean
------------------------------	--------------------------------	-------	---------

Update Site Policy - response - namedPipeExtended

Name	Description	Required	Value
namedPipeExtended	Named Pipe Connection Extended Event Type	false	boolean

Update Site Policy - response - openDirectoryActivity

Name	Description	Required	Value
dvEventTypeOpenDirectoryAddAttributeValue	Add Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryAddMemberToGroup	Add Member to Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateGroup	Create Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateUser	Create User Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteGroup	Delete Group Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteUser	Delete User Event Type	false	boolean
dvEventTypeOpenDirectoryDisableUser	Disable User Event Type	false	boolean
dvEventTypeOpenDirectoryEnableUser	Enable User Event Type	false	boolean
dvEventTypeOpenDirectoryModifyPassword	Modify Password Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveAttributeValue	Remove Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveMemberFromGroup	Remove Member from Group Event Type	false	boolean
dvEventTypeOpenDirectorySetAttributeValues	Set Attribute Values Event Type	false	boolean

dvEventTypeOpenDirectorySetMembersOfGroup	Set Members of Group Event Type	false	boolean
---	---------------------------------	-------	---------

Update Site Policy - response - process

Name	Description	Required	Value
dvEventTypeProcessCreation	Process Creation Event Type	false	boolean
dvEventTypeProcessExit	Process Exit Event Type	false	boolean
dvEventTypeProcessModification	Process Termination Event Type	false	boolean

Update Site Policy - response - profileActivity

Name	Description	Required	Value
dvEventTypeProfileAddition	Profile Addition Event Type	false	boolean
dvEventTypeProfileRemoval	Profile Removal Event Type	false	boolean

Update Site Policy - response - registry

Name	Description	Required	Value
dvEventTypeRegistryKeyCreated	Registry Key Created Event Type	false	boolean
dvEventTypeRegistryKeyDelete	Registry Key Delete Event Type	false	boolean
dvEventTypeRegistryKeyExport	Registry Key Export Event Type	false	boolean
dvEventTypeRegistryKeyImport	Registry Key Import Event Type	false	boolean
dvEventTypeRegistryKeyRename	Registry Key Rename Event Type	false	boolean
dvEventTypeRegistryKeySecurityChanged	Registry Key Security Changed Event Type	false	boolean
dvEventTypeRegistryValueCreated	Registry Value Crated Event Type	false	boolean
dvEventTypeRegistryValueDeleted	Registry Value Deleted Event Type	false	boolean
dvEventTypeRegistryValueModified	Registry Value Modified Event Type	false	boolean

Update Site Policy - response - scheduledTask

Name	Description	Required	Value
dvEventTypeScheduledTaskDelete	Scheduled Task Delete Event Type	false	boolean
dvEventTypeScheduledTaskRegister	Scheduled Task Register Event Type	false	boolean
dvEventTypeScheduledTaskStart	Scheduled Task Start Event Type	false	boolean
dvEventTypeScheduledTaskTrigger	Scheduled Task Trigeer Event Type	false	boolean
dvEventTypeScheduledTaskUpdate	Scheduled Task Update Event Type	false	boolean

Update Site Policy - response - smartFileMonitoring

Name	Description	Required	Value
smartFileMonitoring	Smart file monitoring	false	boolean

Update Site Policy - response - url

Name	Description	Required	Value
dvEventTypeUrl	URL Actions event	false	boolean

Update Site Policy - response - userSubstitution

Name	Description	Required	Value
dvEventTypeSu	su Event Type	false	boolean
dvEventTypeSudo	sudo Event Type	false	boolean

Update Site Policy - response - windowsEventLogs

Name	Description	Required	Value
dvEventTypeWindowsEventLogCreation	Windows Event Log Creation Event Type	false	boolean

Update Site Policy - response - windowsEventLogsExtended

Name	Description	Required	Value
windowsEventLogsExtended	Windows Event Log Extended Event Type	false	boolean

Update Site Policy - response - engines

Name	Description	Required	Value
applicationControl	application control	false	enum
applicationDetection	application detection	false	enum
dataFiles	data files	false	enum
driftDetection	drift detection	false	enum
executables	executables	false	enum
exploits	exploits	false	enum
idr	idr	false	enum
lateralMovement	lateral movement	false	enum
networkProtection	network protection	false	enum
penetration	penetration	false	enum
preExecution	on-write	false	enum
preExecutionSuspicious	pre execution suspicious	false	enum
pup	potentially unwanted applications (PUP)	false	enum
remoteShell	remote shell	false	enum
reputation	reputation	false	enum

Update Site Policy - response - forensicsAutoTriggering

Name	Description	Required	Value
linuxEnabled	True if linux forensics is enabled	false	boolean
linuxProfileId	The profile id for the linux forensics	false	string
linuxProfileName	The profile name for the linux forensics	false	string
macosEnabled	True if macos forensics is enabled	false	boolean

macosProfileId	The profile id for the macos forensics	false	string
macosProfileName	The profile name for the macos forensics	false	string
windowsEnabled	True if windows forensics is enabled	false	boolean
windowsProfileId	The profile id for the windows forensics	false	string
windowsProfileName	The profile name for the windows forensics	false	string

Update Site Policy - response - identityConfigurationSettings

Name	Description	Required	Value
identityMaxCpuThreshold	Identity maximum CPU threshold	false	integer
identityMaxDefinedMemoryLimit	Identity maximum defined memory limit in MB	false	integer
identityMaxMemoryLimit	Identity maximum memory limit in MB	false	integer
identityMaxMemoryUsage	Identity maximum memory usage	false	integer
identityThresholdMonitoring	True if Identity threshold monitoring is enabled	false	boolean

Update Site Policy - response - iocAttributes

Name	Description	Required	Value
autoInstallBrowserExtensions	Update auto install browser extensions	false	boolean
behavioralIndicators	Update behavioral indicators	false	boolean
commandScripts	Update command scripts	false	boolean
crossProcess	Update cross process	false	boolean
dataMasking	Update data masking	false	boolean
dllModuleLoad	Update DLL module load	false	boolean
dns	Network event - DNS	false	boolean
driver	Driver	false	boolean

externalDeviceActivity	External Device Activity	false	boolean
fds	Full disk scan	false	boolean
file	File event	false	boolean
ip	Network event - IP	false	boolean
login	User login/logout event	false	boolean
namedPipe	Named Pipe	false	boolean
namedPipeExtended	Named Pipe Extended	false	boolean
openDirectoryActivity	Open Directory Activity	false	boolean
process	Process creation event	false	boolean
profileActivity	Profile Activity	false	boolean
registry	Registry event	false	boolean
scheduledTask	Scheduled task event	false	boolean
smartFileMonitoring	Smart file monitoring	false	boolean
url	loc URI	false	boolean
userSubstitution	User Substitution	false	boolean
windowsEventLogs	Windows Event Log	false	boolean
windowsEventLogsExtended	Windows Event Log Extended	false	boolean

Update Site Policy - response - remoteOpsForensics

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection process	false	integer
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Update Site Policy - response - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Update Site Policy - body - data table

Update Site Policy - body - data

Name	Description	Required	Value
agentLoggingOn	True if logging is enabled in the agent	false	boolean
agentNotification	[DEPRECATED] Show end point notification on suspicious.Replaced by 'show_suspicious' in the agent UI section	false	boolean
agentUi	Agent ui	false	see Update Site Policy - body - agentUi table
agentUiOn	[DEPRECATED] Show/hide Agent UI. Moved inside the agent UI section	false	boolean
allowRemoteShell	True if Remote Shell is enabled for the scope	false	boolean
allowUnprotectByApprovedProcess	Allow Unprotect By Approved Process on/off	false	boolean
antiTamperingOn	Anti tampering on/off	false	boolean
autoDecommissionDays	Automatic decommission period in days	false	integer
autoDecommissionOn	Auto decommission on	false	boolean
autoFileUpload	Automatic file upload configuration	false	see Update Site Policy - body - autoFileUpload table
autoImmuneOn	Automatic immune on/off - this value must be true since all policies are immune by default	false	boolean
autoMitigationAction	Default action for auto mitigation	false	string
cloudValidationOn	Cloud validation on	false	
createdAt	Timestamp of policy creation	false	string
driftDetectionDelayTime	Drift detection delay time in seconds	false	integer
driverBlocking	Suspicious driver blocking engine on/off	false	boolean
dvAttributesPerEventType	The DV attributes	false	see Update Site Policy - body - dvAttributesPerEventType table
engines	The engines statuses	false	see Update Site Policy - body - engines table
forensicsAutoTriggering	Forensics auto triggering configuration	false	see Update Site Policy - body - forensicsAutoTriggering table
identityConfigurationSettings	Identity configuration	false	see Update Site Policy - body - identityConfigurationSettings table

identityEndpointReporting	Endpoint reporting level	false	enum
identityOn	Identity module on/off	false	boolean
identityReportInterval	Identity telemetry report interval in minutes	false	integer
identityThrottlingInterval	Identity duplicate command consolidation interval in minutes	false	integer
identityUpdateInterval	Identity update interval in minutes	false	integer
informationalAlertsOn	Informational alerts on/off	false	boolean
inheritedFrom	Indicates the parent scope from which this policy is inherited, or 'null' if it is not inherited (modified specifically for the current scope).	false	enum
ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Update Site Policy - body - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean
isDefault	True if this is the tenant policy	false	boolean
isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean
mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean
networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Update Site Policy - body - remoteOpsForensics table
remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Update Site Policy - body - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean
researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first	false	boolean

	registration		
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

Update Site Policy - body - agentUi

Name	Description	Required	Value
agentUiOn	Agent ui on	false	boolean
contactCompany	Contact company	false	string
contactDirectMessage	Contact direct message	false	string
contactEmail	Contact email	false	string
contactFreeText	Contact free text	false	string
contactOther	Contact other	false	string
contactPhoneNumber	Contact phone number	false	string
contactSupportWebsite	Contact support website	false	string
devicePopUpNotifications	Device pop up notifications	false	boolean
maxEventAgeDays	Max event age days	false	integer
showAgentWarnings	Show agent warnings	false	boolean
showDeviceTab	Show device tab	false	boolean
showQuarantineTab	Show quarantine tab	false	boolean
showSupport	Show support	false	boolean
showSuspicious	Show suspicious	false	boolean
threatPopUpNotifications	Threat pop up notifications	false	boolean

Update Site Policy - body - autoFileUpload

Name	Description	Required	Value
enabled	Automatic file upload on/off	false	boolean
includeBenignFiles	Upload benign files	false	boolean
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum file size (MB) to upload	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalDiskUsage	Maximum local disk usage (MB) for uploaded files	false	integer
maxLocalDiskUsageLimit	Limit for the maximum local disk usage (MB) for uploaded files	false	integer

Update Site Policy - body - dvAttributesPerEventType

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	see Update Site Policy - body - autoInstallBrowserExtensions table
behavioralIndicators	Behavioral indicators event	false	see Update Site Policy - body - behavioralIndicators table
commandScripts	Command scripts event	false	see Update Site Policy - body - commandScripts table
crossProcess	Cross process event	false	see Update Site Policy - body - crossProcess table
dataMasking	Data masking	false	see Update Site Policy - body - dataMasking table
dllModuleLoad	DLL module load event	false	see Update Site Policy - body - dllModuleLoad table
dns	Network event - DNS	false	see Update Site Policy - body - dns table
driver	Driver	false	see Update Site Policy - body - driver table
externalDeviceActivity	External Device Activity	false	see Update Site Policy - body - externalDeviceActivity table
file	File event	false	see Update Site Policy - body - file table
ip	Network event - IP	false	see Update Site Policy - body - ip table
login	User login/logout event	false	see Update Site Policy - body - login table
namedPipe	Named Pipe	false	see Update Site Policy - body - namedPipe table
namedPipeExtended	Named Pipe Extended	false	see Update Site Policy - body - namedPipeExtended table
openDirectoryActivity	Open Directory Activity	false	see Update Site Policy - body - openDirectoryActivity table
process	Process event	false	see Update Site Policy - body - process table

profileActivity	Profile Activity	false	see Update Site Policy - body - profileActivity table
registry	Registry event	false	see Update Site Policy - body - registry table
scheduledTask	Scheduled task event	false	see Update Site Policy - body - scheduledTask table
smartFileMonitoring	Smart file monitoring	false	see Update Site Policy - body - smartFileMonitoring table
url	URL Actions event	false	see Update Site Policy - body - url table
userSubstitution	User Substitution	false	see Update Site Policy - body - userSubstitution table
windowsEventLogs	Windows Event Log	false	see Update Site Policy - body - windowsEventLogs table
windowsEventLogsExtended	Windows Event Log Extended	false	see Update Site Policy - body - windowsEventLogsExtended table

Update Site Policy - body - autoInstallBrowserExtensions

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	boolean

Update Site Policy - body - behavioralIndicators

Name	Description	Required	Value
dvEventTypeBehavioralIndicators	Behavioral indicators event	false	boolean

Update Site Policy - body - commandScripts

Name	Description	Required	Value
dvEventTypeCommandScripts	Command scripts event	false	boolean

Update Site Policy - body - crossProcess

Name	Description	Required	Value
dvEventTypeCrossProcessDuplicateProcess	Duplicate Process Event Type	false	boolean
dvEventTypeCrossProcessDuplicateThread	Duplicate Thread Event Type	false	boolean

read			
dvEventTypeCrossProcessOpenProcesses	Open Process Event Type	false	boolean
dvEventTypeCrossProcessRemoteThread	Remote Thread Event Type	false	boolean

Update Site Policy - body - dataMasking

Name	Description	Required	Value
dataMasking	Data masking	false	boolean

Update Site Policy - body - dllModuleLoad

Name	Description	Required	Value
dvEventTypeDllModuleLoad	DLL module load event	false	boolean

Update Site Policy - body - dns

Name	Description	Required	Value
dvEventTypeDns	Network event - DNS	false	boolean
dvEventTypeExtendedDns	Extended DNS event	false	boolean

Update Site Policy - body - driver

Name	Description	Required	Value
dvEventTypeDriverLoad	Driver Load	false	boolean

Update Site Policy - body - externalDeviceActivity

Name	Description	Required	Value
------	-------------	----------	-------

dvEventTypeExternalDeviceConnect	External Device Connect Event Type	false	boolean
dvEventTypeExternalDeviceDisconnect	External Device Disconnect Event Type	false	boolean

Update Site Policy - body - file

Name	Description	Required	Value
dvEventTypeFileCreation	File Creation Event Type	false	boolean
dvEventTypeFileDeletion	File Deletion Event Type	false	boolean
dvEventTypeFileModification	File Modification Event Type	false	boolean
dvEventTypeFileRename	File Rename Event Type	false	boolean
fullDiskScan	File Scan Event Type	false	boolean

Update Site Policy - body - ip

Name	Description	Required	Value
dvEventTypeIpConnect	IP Connect Event Type	false	boolean
dvEventTypeIpListen	IP Listen Event Type	false	boolean

Update Site Policy - body - login

Name	Description	Required	Value
dvEventTypeLoginLoggedIn	User Login Event Type	false	boolean
dvEventTypeLoginLoggedOut	User Logout Event Type	false	boolean

Update Site Policy - body - namedPipe

Name	Description	Required	Value
dvEventTypeNamedPipeConnection	Named Pipe Connection Event Type	false	boolean
dvEventTypeNamedPipeCreation	Named Pipe Creation Event Type	false	boolean

Update Site Policy - body - namedPipeExtended

Name	Description	Required	Value
namedPipeExtended	Named Pipe Connection Extended Event Type	false	boolean

Update Site Policy - body - openDirectoryActivity

Name	Description	Required	Value
dvEventTypeOpenDirectoryAddAttributeValue	Add Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryAddMemberToGroup	Add Member to Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateGroup	Create Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateUser	Create User Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteGroup	Delete Group Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteUser	Delete User Event Type	false	boolean
dvEventTypeOpenDirectoryDisableUser	Disable User Event Type	false	boolean
dvEventTypeOpenDirectoryEnableUser	Enable User Event Type	false	boolean
dvEventTypeOpenDirectoryModifyPassword	Modify Password Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveAttributeValue	Remove Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveMemberFromGroup	Remove Member from Group Event Type	false	boolean
dvEventTypeOpenDirectorySetAttributeValues	Set Attribute Values Event Type	false	boolean
dvEventTypeOpenDirectorySetMembersOfGroup	Set Members of Group Event Type	false	boolean

Update Site Policy - body - process

Name	Description	Required	Value
dvEventTypeProcessCreation	Process Creation Event Type	false	boolean
dvEventTypeProcessExit	Process Exit Event Type	false	boolean
dvEventTypeProcessModification	Process Termination Event Type	false	boolean

Update Site Policy - body - profileActivity

Name	Description	Required	Value
dvEventTypeProfileAddition	Profile Addition Event Type	false	boolean
dvEventTypeProfileRemoval	Profile Removal Event Type	false	boolean

Update Site Policy - body - registry

Name	Description	Required	Value
dvEventTypeRegistryKeyCreated	Registry Key Created Event Type	false	boolean
dvEventTypeRegistryKeyDelete	Registry Key Delete Event Type	false	boolean
dvEventTypeRegistryKeyExport	Registry Key Export Event Type	false	boolean
dvEventTypeRegistryKeyImport	Registry Key Import Event Type	false	boolean
dvEventTypeRegistryKeyRename	Registry Key Rename Event Type	false	boolean
dvEventTypeRegistryKeySecurityChanged	Registry Key Security Changed Event Type	false	boolean
dvEventTypeRegistryValueCreated	Registry Value Crated Event Type	false	boolean
dvEventTypeRegistryValueDeleted	Registry Value Deleted Event Type	false	boolean
dvEventTypeRegistryValueModified	Registry Value Modified Event Type	false	boolean

Update Site Policy - body - scheduledTask

Name	Description	Required	Value
------	-------------	----------	-------

dvEventTypeScheduledTaskDelete	Scheduled Task Delete Event Type	false	boolean
dvEventTypeScheduledTaskRegister	Scheduled Task Register Event Type	false	boolean
dvEventTypeScheduledTaskStart	Scheduled Task Start Event Type	false	boolean
dvEventTypeScheduledTaskTrigger	Scheduled Task Trigeer Event Type	false	boolean
dvEventTypeScheduledTaskUpdate	Scheduled Task Update Event Type	false	boolean

Update Site Policy - body - smartFileMonitoring

Name	Description	Required	Value
smartFileMonitoring	Smart file monitoring	false	boolean

Update Site Policy - body - url

Name	Description	Required	Value
dvEventTypeUrl	URL Actions event	false	boolean

Update Site Policy - body - userSubstitution

Name	Description	Required	Value
dvEventTypeSu	su Event Type	false	boolean
dvEventTypeSudo	sudo Event Type	false	boolean

Update Site Policy - body - windowsEventLogs

Name	Description	Required	Value
dvEventTypeWindowsEventLogCreation	Windows Event Log Creation Event Type	false	boolean

Update Site Policy - body - windowsEventLogsExtended

Name	Description	Required	Value
windowsEventLogsExtended	Windows Event Log Extended Event Type	false	boolean

Update Site Policy - body - engines

Name	Description	Required	Value
applicationControl	application control	false	enum
applicationDetection	application detection	false	enum
dataFiles	data files	false	enum
driftDetection	drift detection	false	enum
executables	executables	false	enum
exploits	exploits	false	enum
idr	idr	false	enum
lateralMovement	lateral movement	false	enum
networkProtection	network protection	false	enum
penetration	penetration	false	enum
preExecution	on-write	false	enum
preExecutionSuspicious	pre execution suspicious	false	enum
pup	potentially unwanted applications (PUP)	false	enum
remoteShell	remote shell	false	enum
reputation	reputation	false	enum

Update Site Policy - body - forensicsAutoTriggering

Name	Description	Required	Value
linuxEnabled	True if linux forensics is enabled	false	boolean
linuxProfileId	The profile id for the linux forensics	false	string
linuxProfileName	The profile name for the linux forensics	false	string
macosEnabled	True if macos forensics is enabled	false	boolean

macosProfileId	The profile id for the macos forensics	false	string
macosProfileName	The profile name for the macos forensics	false	string
windowsEnabled	True if windows forensics is enabled	false	boolean
windowsProfileId	The profile id for the windows forensics	false	string
windowsProfileName	The profile name for the windows forensics	false	string

Update Site Policy - body - identityConfigurationSettings

Name	Description	Required	Value
identityMaxCpuThreshold	Identity maximum CPU threshold	false	integer
identityMaxDefinedMemoryLimit	Identity maximum defined memory limit in MB	false	integer
identityMaxMemoryLimit	Identity maximum memory limit in MB	false	integer
identityMaxMemoryUsage	Identity maximum memory usage	false	integer
identityThresholdMonitoring	True if Identity threshold monitoring is enabled	false	boolean

Update Site Policy - body - iocAttributes

Name	Description	Required	Value
autoInstallBrowserExtensions	Update auto install browser extensions	false	boolean
behavioralIndicators	Update behavioral indicators	false	boolean
commandScripts	Update command scripts	false	boolean
crossProcess	Update cross process	false	boolean
dataMasking	Update data masking	false	boolean
dllModuleLoad	Update DLL module load	false	boolean
dns	Network event - DNS	false	boolean
driver	Driver	false	boolean

externalDeviceActivity	External Device Activity	false	boolean
fds	Full disk scan	false	boolean
file	File event	false	boolean
ip	Network event - IP	false	boolean
login	User login/logout event	false	boolean

windowsEventLogsExtended	Windows Event Log Extended	false	boolean

Update Site Policy - body - remoteOpsForensics

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection process	false	integer
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Update Site Policy - body - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Account Policy

GET /web/api/v2.1/accounts/{account_id}/policy

Get the policy for the Account given by ID. To get the ID of an Account, run "accounts". See also: Get Policy.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

404 - Policy not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Account Policy - response - data table

errors	Errors	false	array
--------	--------	-------	-------

Account Policy - response - data

Name	Description	Required	Value
agentLoggingOn	True if logging is enabled in the agent	false	boolean
agentNotification	[DEPRECATED] Show end point notification on suspicious.Replaced by 'show_suspicious' in the agent UI section	false	boolean
agentUi	Agent ui	false	see Account Policy - response - agentUi table
agentUiOn	[DEPRECATED] Show/hide Agent UI. Moved inside the agent UI section	false	boolean
allowRemoteShell	True if Remote Shell is enabled for the scope	false	boolean
allowUnprotectByApprovedProcess	Allow Unprotect By Approved Process on/off	false	boolean
antiTamperingOn	Anti tampering on/off	false	boolean
autoDecommissionDays	Automatic decommission period in days	false	integer
autoDecommissionOn	Auto decommission on	false	boolean
autoFileUpload	Automatic file upload configuration	false	see Account Policy - response - autoFileUpload table
autoImmuneOn	Automatic immune on/off - this value must be true since all policies are immune by default	false	boolean
autoMitigationAction	Default action for auto mitigation	false	string
cloudValidationOn	Cloud validation on	false	
createdAt	Timestamp of policy creation	false	string
driftDetectionDelayTime	Drift detection delay time in seconds	false	integer
driverBlocking	Suspicious driver blocking engine on/off	false	boolean
dvAttributesPerEventType	The DV attributes	false	see Account Policy - response - dvAttributesPerEventType table
engines	The engines statuses	false	see Account Policy - response - engines table
forensicsAutoTriggering	Forensics auto triggering configuration	false	see Account Policy - response - forensicsAutoTriggering table
fwForNetworkQuarantineEnabled	True if Firewall Control for Network	false	boolean

	Quarantine is enabled		
identityConfigurationSettings	Identity configuration	false	see Account Policy - response - identityConfigurationSettings table
identityEndpointReporting	Endpoint reporting level	false	enum
identityOn	Identity module on/off	false	boolean
identityReportInterval	Identity telemetry report interval in minutes	false	integer
identityThrottlingInterval	Identity duplicate command consolidation interval in minutes	false	integer
identityUpdateInterval	Identity update interval in minutes	false	integer
informationalAlertsOn	Informational alerts on/off	false	boolean
inheritedFrom	Indicates the parent scope from which this policy is inherited, or 'null' if it is not inherited (modified specifically for the current scope).	false	enum
ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Account Policy - response - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean
isDefault	True if this is the tenant policy	false	boolean
isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean
mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean
networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Account Policy - response - remoteOpsForensics table
remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Account Policy - response - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean

researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first registration	false	boolean
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

Account Policy - response - agentUi

Name	Description	Required	Value
agentUiOn	Agent ui on	false	boolean
contactCompany	Contact company	false	string
contactDirectMessage	Contact direct message	false	string
contactEmail	Contact email	false	string
contactFreeText	Contact free text	false	string
contactOther	Contact other	false	string
contactPhoneNumber	Contact phone number	false	string
contactSupportWebsite	Contact support website	false	string
devicePopUpNotifications	Device pop up notifications	false	boolean
maxEventAgeDays	Max event age days	false	integer
showAgentWarnings	Show agent warnings	false	boolean
showDeviceTab	Show device tab	false	boolean
showQuarantineTab	Show quarantine tab	false	boolean
showSupport	Show support	false	boolean
showSuspicious	Show suspicious	false	boolean
threatPopUpNotifications	Threat pop up notifications	false	boolean

Account Policy - response - autoFileUpload

Name	Description	Required	Value
enabled	Automatic file upload on/off	false	boolean
includeBenignFiles	Upload benign files	false	boolean
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum file size (MB) to upload	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalDiskUsage	Maximum local disk usage (MB) for uploaded files	false	integer
maxLocalDiskUsageLimit	Limit for the maximum local disk usage (MB) for uploaded files	false	integer

Account Policy - response - dvAttributesPerEventType

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	see Account Policy - response - autoInstallBrowserExtensions table
behavioralIndicators	Behavioral indicators event	false	see Account Policy - response - behavioralIndicators table
commandScripts	Command scripts event	false	see Account Policy - response - commandScripts table
crossProcess	Cross process event	false	see Account Policy - response - crossProcess table
dataMasking	Data masking	false	see Account Policy - response - dataMasking table
dllModuleLoad	DLL module load event	false	see Account Policy - response - dllModuleLoad table
dns	Network event - DNS	false	see Account Policy - response - dns table
driver	Driver	false	see Account Policy - response - driver table
externalDeviceActivity	External Device Activity	false	see Account Policy - response - externalDeviceActivity table
file	File event	false	see Account Policy - response - file table
ip	Network event - IP	false	see Account Policy - response - ip table
login	User login/logout event	false	see Account Policy - response - login table
namedPipe	Named Pipe	false	see Account Policy - response - namedPipe table

[see Account Policy - response - namedPipeExtended table](#)

namedPipeExtended	Named Pipe Extended	false	
openDirectoryActivity	Open Directory Activity	false	see Account Policy - response - openDirectoryActivity table
process	Process event	false	see Account Policy - response - process table
profileActivity	Profile Activity	false	see Account Policy - response - profileActivity table
registry	Registry event	false	see Account Policy - response - registry table
scheduledTask	Scheduled task event	false	see Account Policy - response - scheduledTask table
smartFileMonitoring	Smart file monitoring	false	see Account Policy - response - smartFileMonitoring table
url	URL Actions event	false	see Account Policy - response - url table
userSubstitution	User Substitution	false	see Account Policy - response - userSubstitution table
windowsEventLogs	Windows Event Log	false	see Account Policy - response - windowsEventLogs table
windowsEventLogsExtended	Windows Event Log Extended	false	see Account Policy - response - windowsEventLogsExtended table

Account Policy - response - autoInstallBrowserExtensions

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	boolean

Account Policy - response - behavioralIndicators

Name	Description	Required	Value
dvEventTypeBehavioralIndicators	Behavioral indicators event	false	boolean

Account Policy - response - commandScripts

Name	Description	Required	Value
dvEventTypeCommandScripts	Command scripts event	false	boolean

Account Policy - response - crossProcess

Name	Description	Required	Value
------	-------------	----------	-------

dvEventTypeCrossProcessDuplicateProcess	Duplicate Process Event Type	false	boolean
dvEventTypeCrossProcessDuplicateThread	Duplicate Thread Event Type	false	boolean
dvEventTypeCrossProcessOpenProcesses	Open Process Event Type	false	boolean
dvEventTypeCrossProcessRemoteThread	Remote Thread Event Type	false	boolean

Account Policy - response - dataMasking

Name	Description	Required	Value
dataMasking	Data masking	false	boolean

Account Policy - response - dllModuleLoad

Name	Description	Required	Value
dvEventTypeDllModuleLoad	DLL module load event	false	boolean

Account Policy - response - dns

Name	Description	Required	Value
dvEventTypeDns	Network event - DNS	false	boolean
dvEventTypeExtendedDns	Extended DNS event	false	boolean

Account Policy - response - driver

Name	Description	Required	Value
dvEventTypeDriverLoad	Driver Load	false	boolean

Account Policy - response - externalDeviceActivity

Name	Description	Required	Value
dvEventTypeExternalDeviceConnect	External Device Connect Event Type	false	boolean
dvEventTypeExternalDeviceDisconnect	External Device Disconnect Event Type	false	boolean

Account Policy - response - file

Name	Description	Required	Value
dvEventTypeFileCreation	File Creation Event Type	false	boolean
dvEventTypeFileDeletion	File Deletion Event Type	false	boolean
dvEventTypeFileModification	File Modification Event Type	false	boolean
dvEventTypeFileRename	File Rename Event Type	false	boolean
fullDiskScan	File Scan Event Type	false	boolean

Account Policy - response - ip

Name	Description	Required	Value
dvEventTypeIpConnect	IP Connect Event Type	false	boolean
dvEventTypeIpListen	IP Listen Event Type	false	boolean

Account Policy - response - login

Name	Description	Required	Value
dvEventTypeLoginLoggedIn	User Login Event Type	false	boolean
dvEventTypeLoginLoggedOut	User Logout Event Type	false	boolean

Account Policy - response - namedPipe

Name	Description	Required	Value
dvEventTypeNamedPipeConnection	Named Pipe Connection Event Type	false	boolean

dvEventTypeNamedPipeCreation	Named Pipe Creation Event Type	false	boolean
------------------------------	--------------------------------	-------	---------

Account Policy - response - namedPipeExtended

Name	Description	Required	Value
namedPipeExtended	Named Pipe Connection Extended Event Type	false	boolean

Account Policy - response - openDirectoryActivity

Name	Description	Required	Value
dvEventTypeOpenDirectoryAddAttributeValue	Add Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryAddMemberToGroup	Add Member to Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateGroup	Create Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateUser	Create User Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteGroup	Delete Group Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteUser	Delete User Event Type	false	boolean
dvEventTypeOpenDirectoryDisableUser	Disable User Event Type	false	boolean
dvEventTypeOpenDirectoryEnableUser	Enable User Event Type	false	boolean
dvEventTypeOpenDirectoryModifyPassword	Modify Password Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveAttributeValue	Remove Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveMemberFromGroup	Remove Member from Group Event Type	false	boolean
dvEventTypeOpenDirectorySetAttributeValues	Set Attribute Values Event Type	false	boolean

dvEventTypeOpenDirectorySetMembersOfGroup	Set Members of Group Event Type	false	boolean
---	---------------------------------	-------	---------

Account Policy - response - process

Name	Description	Required	Value
dvEventTypeProcessCreation	Process Creation Event Type	false	boolean
dvEventTypeProcessExit	Process Exit Event Type	false	boolean
dvEventTypeProcessModification	Process Termination Event Type	false	boolean

Account Policy - response - profileActivity

Name	Description	Required	Value
dvEventTypeProfileAddition	Profile Addition Event Type	false	boolean
dvEventTypeProfileRemoval	Profile Removal Event Type	false	boolean

Account Policy - response - registry

Name	Description	Required	Value
dvEventTypeRegistryKeyCreated	Registry Key Created Event Type	false	boolean
dvEventTypeRegistryKeyDelete	Registry Key Delete Event Type	false	boolean
dvEventTypeRegistryKeyExport	Registry Key Export Event Type	false	boolean
dvEventTypeRegistryKeyImport	Registry Key Import Event Type	false	boolean
dvEventTypeRegistryKeyRename	Registry Key Rename Event Type	false	boolean
dvEventTypeRegistryKeySecurityChanged	Registry Key Security Changed Event Type	false	boolean
dvEventTypeRegistryValueCreated	Registry Value Crated Event Type	false	boolean
dvEventTypeRegistryValueDeleted	Registry Value Deleted Event Type	false	boolean
dvEventTypeRegistryValueModified	Registry Value Modified Event Type	false	boolean

Account Policy - response - scheduledTask

Name	Description	Required	Value
dvEventTypeScheduledTaskDelete	Scheduled Task Delete Event Type	false	boolean
dvEventTypeScheduledTaskRegister	Scheduled Task Register Event Type	false	boolean
dvEventTypeScheduledTaskStart	Scheduled Task Start Event Type	false	boolean
dvEventTypeScheduledTaskTrigger	Scheduled Task Trigeer Event Type	false	boolean
dvEventTypeScheduledTaskUpdate	Scheduled Task Update Event Type	false	boolean

Account Policy - response - smartFileMonitoring

Name	Description	Required	Value
smartFileMonitoring	Smart file monitoring	false	boolean

Account Policy - response - url

Name	Description	Required	Value
dvEventTypeUrl	URL Actions event	false	boolean

Account Policy - response - userSubstitution

Name	Description	Required	Value
dvEventTypeSu	su Event Type	false	boolean
dvEventTypeSudo	sudo Event Type	false	boolean

Account Policy - response - windowsEventLogs

Name	Description	Required	Value
dvEventTypeWindowsEventLogCreation	Windows Event Log Creation Event Type	false	boolean

Account Policy - response - windowsEventLogsExtended

Name	Description	Required	Value
windowsEventLogsExtended	Windows Event Log Extended Event Type	false	boolean

Account Policy - response - engines

Name	Description	Required	Value
applicationControl	application control	false	enum
applicationDetection	application detection	false	enum
dataFiles	data files	false	enum
driftDetection	drift detection	false	enum
executables	executables	false	enum
exploits	exploits	false	enum
idr	idr	false	enum
lateralMovement	lateral movement	false	enum
networkProtection	network protection	false	enum
penetration	penetration	false	enum
preExecution	on-write	false	enum
preExecutionSuspicious	pre execution suspicious	false	enum
pup	potentially unwanted applications (PUP)	false	enum
remoteShell	remote shell	false	enum
reputation	reputation	false	enum

Account Policy - response - forensicsAutoTriggering

Name	Description	Required	Value
linuxEnabled	True if linux forensics is enabled	false	boolean
linuxProfileId	The profile id for the linux forensics	false	string
linuxProfileName	The profile name for the linux forensics	false	string
macosEnabled	True if macos forensics is enabled	false	boolean

macosProfileId	The profile id for the macos forensics	false	string
macosProfileName	The profile name for the macos forensics	false	string
windowsEnabled	True if windows forensics is enabled	false	boolean
windowsProfileId	The profile id for the windows forensics	false	string
windowsProfileName	The profile name for the windows forensics	false	string

Account Policy - response - identityConfigurationSettings

Name	Description	Required	Value
identityMaxCpuThreshold	Identity maximum CPU threshold	false	integer
identityMaxDefinedMemoryLimit	Identity maximum defined memory limit in MB	false	integer
identityMaxMemoryLimit	Identity maximum memory limit in MB	false	integer
identityMaxMemoryUsage	Identity maximum memory usage	false	integer
identityThresholdMonitoring	True if Identity threshold monitoring is enabled	false	boolean

Account Policy - response - iocAttributes

Name	Description	Required	Value
autoInstallBrowserExtensions	Update auto install browser extensions	false	boolean
behavioralIndicators	Update behavioral indicators	false	boolean
commandScripts	Update command scripts	false	boolean
crossProcess	Update cross process	false	boolean
dataMasking	Update data masking	false	boolean
dllModuleLoad	Update DLL module load	false	boolean
dns	Network event - DNS	false	boolean
driver	Driver	false	boolean

externalDeviceActivity	External Device Activity	false	boolean
fds	Full disk scan	false	boolean
file	File event	false	boolean
ip	Network event - IP	false	boolean
login	User login/logout event	false	boolean
namedPipe	Named Pipe	false	boolean
namedPipeExtended	Named Pipe Extended	false	boolean
openDirectoryActivity	Open Directory Activity	false	boolean
process	Process creation event	false	boolean
profileActivity	Profile Activity	false	boolean
registry	Registry event	false	boolean
scheduledTask	Scheduled task event	false	boolean
smartFileMonitoring	Smart file monitoring	false	boolean
url	loc URI	false	boolean
userSubstitution	User Substitution	false	boolean
windowsEventLogs	Windows Event Log	false	boolean
windowsEventLogsExtended	Windows Event Log Extended	false	boolean

Account Policy - response - remoteOpsForensics

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection process	false	integer
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Account Policy - response - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Update Account Policy

PUT /web/api/v2.1/accounts/{account_id}/policy

Change the policy for the Account given by ID. Best practice: Get the policy of the Account before you attempt to change it. See also: [Get Policy](#).

BEST PRACTICE

Get the policy of the Account before you attempt to change it. See also: [Get Policy](#).

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

404 - Account not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Update Account Policy - response - data table
errors	Errors	false	array

Update Account Policy - response - data

Name	Description	Required	Value
agentLoggingOn	True if logging is enabled in the agent	false	boolean
agentNotification	[DEPRECATED] Show end point notification on suspicious.Replaced by 'show_suspicious' in the agent UI section	false	boolean
agentUi	Agent ui	false	see Update Account Policy - response - agentUi table
agentUiOn	[DEPRECATED] Show/hide Agent UI. Moved inside the agent UI section	false	boolean
allowRemoteShell	True if Remote Shell is enabled for the scope	false	boolean
allowUnprotectByApprovedProcess	Allow Unprotect By Approved Process on/off	false	boolean
antiTamperingOn	Anti tampering on/off	false	boolean
autoDecommissionDays	Automatic decommission period in days	false	integer
autoDecommissionOn	Auto decommission on	false	boolean
autoFileUpload	Automatic file upload configuration	false	see Update Account Policy - response - autoFileUpload table
autoImmuneOn	Automatic immune on/off - this value must be true since all policies are immune by default	false	boolean
autoMitigationAction	Default action for auto mitigation	false	string
cloudValidationOn	Cloud validation on	false	
createdAt	Timestamp of policy creation	false	string
driftDetectionDelayTime	Drift detection delay time in seconds	false	integer
driverBlocking	Suspicious driver blocking engine on/off	false	boolean
dvAttributesPerEventType	The DV attributes	false	see Update Account Policy - response - dvAttributesPerEventType table
engines	The engines statuses	false	see Update Account Policy - response - engines table
forensicsAutoTriggering	Forensics auto triggering configuration	false	see Update Account Policy - response - forensicsAutoTriggering table
fwForNetworkQuarantineEnabled	True if Firewall Control for Network	false	boolean

	Quarantine is enabled		
identityConfigurationSettings	Identity configuration	false	see Update Account Policy - response - identityConfigurationSettings table
identityEndpointReporting	Endpoint reporting level	false	enum
identityOn	Identity module on/off	false	boolean
identityReportInterval	Identity telemetry report interval in minutes	false	integer
identityThrottlingInterval	Identity duplicate command consolidation interval in minutes	false	integer
identityUpdateInterval	Identity update interval in minutes	false	integer
informationalAlertsOn	Informational alerts on/off	false	boolean
inheritedFrom	Indicates the parent scope from which this policy is inherited, or 'null' if it is not inherited (modified specifically for the current scope).	false	enum
ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Update Account Policy - response - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean
isDefault	True if this is the tenant policy	false	boolean
isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean
mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean
networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Update Account Policy - response - remoteOpsForensics table
remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Update Account Policy - response - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean

researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first registration	false	boolean
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

Update Account Policy - response - agentUi

Name	Description	Required	Value
agentUiOn	Agent ui on	false	boolean
contactCompany	Contact company	false	string
contactDirectMessage	Contact direct message	false	string
contactEmail	Contact email	false	string
contactFreeText	Contact free text	false	string
contactOther	Contact other	false	string
contactPhoneNumber	Contact phone number	false	string
contactSupportWebsite	Contact support website	false	string
devicePopUpNotifications	Device pop up notifications	false	boolean
maxEventAgeDays	Max event age days	false	integer
showAgentWarnings	Show agent warnings	false	boolean
showDeviceTab	Show device tab	false	boolean
showQuarantineTab	Show quarantine tab	false	boolean
showSupport	Show support	false	boolean
showSuspicious	Show suspicious	false	boolean
threatPopUpNotifications	Threat pop up notifications	false	boolean

Update Account Policy - response - autoFileUpload

Name	Description	Required	Value
enabled	Automatic file upload on/off	false	boolean
includeBenignFiles	Upload benign files	false	boolean
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum file size (MB) to upload	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalDiskUsage	Maximum local disk usage (MB) for uploaded files	false	integer
maxLocalDiskUsageLimit	Limit for the maximum local disk usage (MB) for uploaded files	false	integer

Update Account Policy - response - dvAttributesPerEventType

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	see Update Account Policy - response - autoInstallBrowserExtensions table
behavioralIndicators	Behavioral indicators event	false	see Update Account Policy - response - behavioralIndicators table
commandScripts	Command scripts event	false	see Update Account Policy - response - commandScripts table
crossProcess	Cross process event	false	see Update Account Policy - response - crossProcess table
dataMasking	Data masking	false	see Update Account Policy - response - dataMasking table
dllModuleLoad	DLL module load event	false	see Update Account Policy - response - dllModuleLoad table
dns	Network event - DNS	false	see Update Account Policy - response - dns table
driver	Driver	false	see Update Account Policy - response - driver table
externalDeviceActivity	External Device Activity	false	see Update Account Policy - response - externalDeviceActivity table
file	File event	false	see Update Account Policy - response - file table
ip	Network event - IP	false	see Update Account Policy - response - ip table
login	User login/logout event	false	see Update Account Policy - response - login table
namedPipe	Named Pipe	false	see Update Account Policy - response - namedPipe table

[see Update Account Policy - response - namedPipeExtended table](#)

namedPipeExtended	Named Pipe Extended	false	
openDirectoryActivity	Open Directory Activity	false	see Update Account Policy - response - openDirectoryActivity table
process	Process event	false	see Update Account Policy - response - process table
profileActivity	Profile Activity	false	see Update Account Policy - response - profileActivity table
registry	Registry event	false	see Update Account Policy - response - registry table
scheduledTask	Scheduled task event	false	see Update Account Policy - response - scheduledTask table
smartFileMonitoring	Smart file monitoring	false	see Update Account Policy - response - smartFileMonitoring table
url	URL Actions event	false	see Update Account Policy - response - url table
userSubstitution	User Substitution	false	see Update Account Policy - response - userSubstitution table
windowsEventLogs	Windows Event Log	false	see Update Account Policy - response - windowsEventLogs table
windowsEventLogsExtended	Windows Event Log Extended	false	see Update Account Policy - response - windowsEventLogsExtended table

Update Account Policy - response - autoInstallBrowserExtensions

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	boolean

Update Account Policy - response - behavioralIndicators

Name	Description	Required	Value
dvEventTypeBehavioralIndicators	Behavioral indicators event	false	boolean

Update Account Policy - response - commandScripts

Name	Description	Required	Value
dvEventTypeCommandScripts	Command scripts event	false	boolean

Update Account Policy - response - crossProcess

Name	Description	Required	Value
------	-------------	----------	-------

dvEventTypeCrossProcessDuplicateProcess	Duplicate Process Event Type	false	boolean
dvEventTypeCrossProcessDuplicateThread	Duplicate Thread Event Type	false	boolean
dvEventTypeCrossProcessOpenProcesses	Open Process Event Type	false	boolean
dvEventTypeCrossProcessRemoteThread	Remote Thread Event Type	false	boolean

Update Account Policy - response - dataMasking

Name	Description	Required	Value
dataMasking	Data masking	false	boolean

Update Account Policy - response - dllModuleLoad

Name	Description	Required	Value
dvEventTypeDllModuleLoad	DLL module load event	false	boolean

Update Account Policy - response - dns

Name	Description	Required	Value
dvEventTypeDns	Network event - DNS	false	boolean
dvEventTypeExtendedDns	Extended DNS event	false	boolean

Update Account Policy - response - driver

Name	Description	Required	Value
dvEventTypeDriverLoad	Driver Load	false	boolean

Update Account Policy - response - externalDeviceActivity

Name	Description	Required	Value
dvEventTypeExternalDeviceConnect	External Device Connect Event Type	false	boolean
dvEventTypeExternalDeviceDisconnect	External Device Disconnect Event Type	false	boolean

Update Account Policy - response - file

Name	Description	Required	Value
dvEventTypeFileCreation	File Creation Event Type	false	boolean
dvEventTypeFileDeletion	File Deletion Event Type	false	boolean
dvEventTypeFileModification	File Modification Event Type	false	boolean
dvEventTypeFileRename	File Rename Event Type	false	boolean
fullDiskScan	File Scan Event Type	false	boolean

Update Account Policy - response - ip

Name	Description	Required	Value
dvEventTypeIpConnect	IP Connect Event Type	false	boolean
dvEventTypeIpListen	IP Listen Event Type	false	boolean

Update Account Policy - response - login

Name	Description	Required	Value
dvEventTypeLoginLoggedIn	User Login Event Type	false	boolean
dvEventTypeLoginLoggedOut	User Logout Event Type	false	boolean

Update Account Policy - response - namedPipe

Name	Description	Required	Value
dvEventTypeNamedPipeConnection	Named Pipe Connection Event Type	false	boolean

dvEventTypeNamedPipeCreation	Named Pipe Creation Event Type	false	boolean
------------------------------	--------------------------------	-------	---------

Update Account Policy - response - namedPipeExtended

Name	Description	Required	Value
namedPipeExtended	Named Pipe Connection Extended Event Type	false	boolean

Update Account Policy - response - openDirectoryActivity

Name	Description	Required	Value
dvEventTypeOpenDirectoryAddAttributeValue	Add Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryAddMemberToGroup	Add Member to Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateGroup	Create Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateUser	Create User Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteGroup	Delete Group Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteUser	Delete User Event Type	false	boolean
dvEventTypeOpenDirectoryDisableUser	Disable User Event Type	false	boolean
dvEventTypeOpenDirectoryEnableUser	Enable User Event Type	false	boolean
dvEventTypeOpenDirectoryModifyPassword	Modify Password Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveAttributeValue	Remove Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveMemberFromGroup	Remove Member from Group Event Type	false	boolean
dvEventTypeOpenDirectorySetAttributeValues	Set Attribute Values Event Type	false	boolean

dvEventTypeOpenDirectorySetMembersOfGroup	Set Members of Group Event Type	false	boolean
---	---------------------------------	-------	---------

Update Account Policy - response - process

Name	Description	Required	Value
dvEventTypeProcessCreation	Process Creation Event Type	false	boolean
dvEventTypeProcessExit	Process Exit Event Type	false	boolean
dvEventTypeProcessModification	Process Termination Event Type	false	boolean

Update Account Policy - response - profileActivity

Name	Description	Required	Value
dvEventTypeProfileAddition	Profile Addition Event Type	false	boolean
dvEventTypeProfileRemoval	Profile Removal Event Type	false	boolean

Update Account Policy - response - registry

Name	Description	Required	Value
dvEventTypeRegistryKeyCreated	Registry Key Created Event Type	false	boolean
dvEventTypeRegistryKeyDelete	Registry Key Delete Event Type	false	boolean
dvEventTypeRegistryKeyExport	Registry Key Export Event Type	false	boolean
dvEventTypeRegistryKeyImport	Registry Key Import Event Type	false	boolean
dvEventTypeRegistryKeyRename	Registry Key Rename Event Type	false	boolean
dvEventTypeRegistryKeySecurityChanged	Registry Key Security Changed Event Type	false	boolean
dvEventTypeRegistryValueCreated	Registry Value Crated Event Type	false	boolean
dvEventTypeRegistryValueDeleted	Registry Value Deleted Event Type	false	boolean
dvEventTypeRegistryValueModified	Registry Value Modified Event Type	false	boolean

Update Account Policy - response - scheduledTask

Name	Description	Required	Value
dvEventTypeScheduledTaskDelete	Scheduled Task Delete Event Type	false	boolean
dvEventTypeScheduledTaskRegister	Scheduled Task Register Event Type	false	boolean
dvEventTypeScheduledTaskStart	Scheduled Task Start Event Type	false	boolean
dvEventTypeScheduledTaskTrigger	Scheduled Task Trigeer Event Type	false	boolean
dvEventTypeScheduledTaskUpdate	Scheduled Task Update Event Type	false	boolean

Update Account Policy - response - smartFileMonitoring

Name	Description	Required	Value
smartFileMonitoring	Smart file monitoring	false	boolean

Update Account Policy - response - url

Name	Description	Required	Value
dvEventTypeUrl	URL Actions event	false	boolean

Update Account Policy - response - userSubstitution

Name	Description	Required	Value
dvEventTypeSu	su Event Type	false	boolean
dvEventTypeSudo	sudo Event Type	false	boolean

Update Account Policy - response - windowsEventLogs

Name	Description	Required	Value
dvEventTypeWindowsEventLogCreation	Windows Event Log Creation Event Type	false	boolean

Update Account Policy - response - windowsEventLogsExtended

Name	Description	Required	Value
windowsEventLogsExtended	Windows Event Log Extended Event Type	false	boolean

Update Account Policy - response - engines

Name	Description	Required	Value
applicationControl	application control	false	enum
applicationDetection	application detection	false	enum
dataFiles	data files	false	enum
driftDetection	drift detection	false	enum
executables	executables	false	enum
exploits	exploits	false	enum
idr	idr	false	enum
lateralMovement	lateral movement	false	enum
networkProtection	network protection	false	enum
penetration	penetration	false	enum
preExecution	on-write	false	enum
preExecutionSuspicious	pre execution suspicious	false	enum
pup	potentially unwanted applications (PUP)	false	enum
remoteShell	remote shell	false	enum
reputation	reputation	false	enum

Update Account Policy - response - forensicsAutoTriggering

Name	Description	Required	Value
linuxEnabled	True if linux forensics is enabled	false	boolean
linuxProfileId	The profile id for the linux forensics	false	string
linuxProfileName	The profile name for the linux forensics	false	string
macosEnabled	True if macos forensics is enabled	false	boolean

macosProfileId	The profile id for the macos forensics	false	string
macosProfileName	The profile name for the macos forensics	false	string
windowsEnabled	True if windows forensics is enabled	false	boolean
windowsProfileId	The profile id for the windows forensics	false	string
windowsProfileName	The profile name for the windows forensics	false	string

Update Account Policy - response - identityConfigurationSettings

Name	Description	Required	Value
identityMaxCpuThreshold	Identity maximum CPU threshold	false	integer
identityMaxDefinedMemoryLimit	Identity maximum defined memory limit in MB	false	integer
identityMaxMemoryLimit	Identity maximum memory limit in MB	false	integer
identityMaxMemoryUsage	Identity maximum memory usage	false	integer
identityThresholdMonitoring	True if Identity threshold monitoring is enabled	false	boolean

Update Account Policy - response - iocAttributes

Name	Description	Required	Value
autoInstallBrowserExtensions	Update auto install browser extensions	false	boolean
behavioralIndicators	Update behavioral indicators	false	boolean
commandScripts	Update command scripts	false	boolean
crossProcess	Update cross process	false	boolean
dataMasking	Update data masking	false	boolean
dllModuleLoad	Update DLL module load	false	boolean
dns	Network event - DNS	false	boolean
driver	Driver	false	boolean

externalDeviceActivity	External Device Activity	false	boolean
fds	Full disk scan	false	boolean
file	File event	false	boolean
ip	Network event - IP	false	boolean
login	User login/logout event	false	boolean
namedPipe	Named Pipe	false	boolean
namedPipeExtended	Named Pipe Extended	false	boolean
openDirectoryActivity	Open Directory Activity	false	boolean
process	Process creation event	false	boolean
profileActivity	Profile Activity	false	boolean
registry	Registry event	false	boolean
scheduledTask	Scheduled task event	false	boolean
smartFileMonitoring	Smart file monitoring	false	boolean
url	loc URI	false	boolean
userSubstitution	User Substitution	false	boolean
windowsEventLogs	Windows Event Log	false	boolean
windowsEventLogsExtended	Windows Event Log Extended	false	boolean

Update Account Policy - response - remoteOpsForensics

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection process	false	integer
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Update Account Policy - response - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Update Account Policy - body - data table

Update Account Policy - body - data

Name	Description	Required	Value
agentLoggingOn	True if logging is enabled in the agent	false	boolean
agentNotification	[DEPRECATED] Show end point notification on suspicious.Replaced by 'show_suspicious' in the agent UI section	false	boolean
agentUi	Agent ui	false	see Update Account Policy - body - agentUi table
agentUiOn	[DEPRECATED] Show/hide Agent UI. Moved inside the agent UI section	false	boolean
allowRemoteShell	True if Remote Shell is enabled for the scope	false	boolean
allowUnprotectByApprovedProcess	Allow Unprotect By Approved Process on/off	false	boolean
antiTamperingOn	Anti tampering on/off	false	boolean
autoDecommissionDays	Automatic decommission period in days	false	integer
autoDecommissionOn	Auto decommission on	false	boolean
autoFileUpload	Automatic file upload configuration	false	see Update Account Policy - body - autoFileUpload table
autoImmuneOn	Automatic immune on/off - this value must be true since all policies are immune by default	false	boolean
autoMitigationAction	Default action for auto mitigation	false	string
cloudValidationOn	Cloud validation on	false	
createdAt	Timestamp of policy creation	false	string
driftDetectionDelayTime	Drift detection delay time in seconds	false	integer
driverBlocking	Suspicious driver blocking engine on/off	false	boolean
dvAttributesPerEventType	The DV attributes	false	see Update Account Policy - body - dvAttributesPerEventType table
engines	The engines statuses	false	see Update Account Policy - body - engines table
forensicsAutoTriggering	Forensics auto triggering configuration	false	see Update Account Policy - body - forensicsAutoTriggering table
identityConfigurationSettings	Identity configuration	false	see Update Account Policy - body - identityConfigurationSettings table

identityEndpointReporting	Endpoint reporting level	false	enum
identityOn	Identity module on/off	false	boolean
identityReportInterval	Identity telemetry report interval in minutes	false	integer
identityThrottlingInterval	Identity duplicate command consolidation interval in minutes	false	integer
identityUpdateInterval	Identity update interval in minutes	false	integer
informationalAlertsOn	Informational alerts on/off	false	boolean
inheritedFrom	Indicates the parent scope from which this policy is inherited, or 'null' if it is not inherited (modified specifically for the current scope).	false	enum
ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Update Account Policy - body - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean
isDefault	True if this is the tenant policy	false	boolean
isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean
mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean
networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Update Account Policy - body - remoteOpsForensics table
remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Update Account Policy - body - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean
researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first	false	boolean

	registration		
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

Update Account Policy - body - agentUi

Name	Description	Required	Value
agentUiOn	Agent ui on	false	boolean
contactCompany	Contact company	false	string
contactDirectMessage	Contact direct message	false	string
contactEmail	Contact email	false	string
contactFreeText	Contact free text	false	string
contactOther	Contact other	false	string
contactPhoneNumber	Contact phone number	false	string
contactSupportWebsite	Contact support website	false	string
devicePopUpNotifications	Device pop up notifications	false	boolean
maxEventAgeDays	Max event age days	false	integer
showAgentWarnings	Show agent warnings	false	boolean
showDeviceTab	Show device tab	false	boolean
showQuarantineTab	Show quarantine tab	false	boolean
showSupport	Show support	false	boolean
showSuspicious	Show suspicious	false	boolean
threatPopUpNotifications	Threat pop up notifications	false	boolean

Update Account Policy - body - autoFileUpload

Name	Description	Required	Value
enabled	Automatic file upload on/off	false	boolean
includeBenignFiles	Upload benign files	false	boolean
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum file size (MB) to upload	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalDiskUsage	Maximum local disk usage (MB) for uploaded files	false	integer
maxLocalDiskUsageLimit	Limit for the maximum local disk usage (MB) for uploaded files	false	integer

Update Account Policy - body - dvAttributesPerEventType

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	see Update Account Policy - body - autoInstallBrowserExtensions table
behavioralIndicators	Behavioral indicators event	false	see Update Account Policy - body - behavioralIndicators table
commandScripts	Command scripts event	false	see Update Account Policy - body - commandScripts table
crossProcess	Cross process event	false	see Update Account Policy - body - crossProcess table
dataMasking	Data masking	false	see Update Account Policy - body - dataMasking table
dllModuleLoad	DLL module load event	false	see Update Account Policy - body - dllModuleLoad table
dns	Network event - DNS	false	see Update Account Policy - body - dns table
driver	Driver	false	see Update Account Policy - body - driver table
externalDeviceActivity	External Device Activity	false	see Update Account Policy - body - externalDeviceActivity table
file	File event	false	see Update Account Policy - body - file table
ip	Network event - IP	false	see Update Account Policy - body - ip table
login	User login/logout event	false	see Update Account Policy - body - login table
namedPipe	Named Pipe	false	see Update Account Policy - body - namedPipe table
namedPipeExtended	Named Pipe Extended	false	see Update Account Policy - body - namedPipeExtended table
openDirectoryActivity	Open Directory Activity	false	see Update Account Policy - body - openDirectoryActivity table
process	Process event	false	see Update Account Policy - body - process table

profileActivity	Profile Activity	false	see Update Account Policy - body - profileActivity table
registry	Registry event	false	see Update Account Policy - body - registry table
scheduledTask	Scheduled task event	false	see Update Account Policy - body - scheduledTask table
smartFileMonitoring	Smart file monitoring	false	see Update Account Policy - body - smartFileMonitoring table
url	URL Actions event	false	see Update Account Policy - body - url table
userSubstitution	User Substitution	false	see Update Account Policy - body - userSubstitution table
windowsEventLogs	Windows Event Log	false	see Update Account Policy - body - windowsEventLogs table
windowsEventLogsExtended	Windows Event Log Extended	false	see Update Account Policy - body - windowsEventLogsExtended table

Update Account Policy - body - autoInstallBrowserExtensions

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	boolean

Update Account Policy - body - behavioralIndicators

Name	Description	Required	Value
dvEventTypeBehavioralIndicators	Behavioral indicators event	false	boolean

Update Account Policy - body - commandScripts

Name	Description	Required	Value
dvEventTypeCommandScripts	Command scripts event	false	boolean

Update Account Policy - body - crossProcess

Name	Description	Required	Value
dvEventTypeCrossProcessDuplicateProcess	Duplicate Process Event Type	false	boolean
dvEventTypeCrossProcessDuplicateThread	Duplicate Thread Event Type	false	boolean

read			
dvEventTypeCrossProcessOpenProcesses	Open Process Event Type	false	boolean
dvEventTypeCrossProcessRemoteThread	Remote Thread Event Type	false	boolean

Update Account Policy - body - dataMasking

Name	Description	Required	Value
dataMasking	Data masking	false	boolean

Update Account Policy - body - dllModuleLoad

Name	Description	Required	Value
dvEventTypeDllModuleLoad	DLL module load event	false	boolean

Update Account Policy - body - dns

Name	Description	Required	Value
dvEventTypeDns	Network event - DNS	false	boolean
dvEventTypeExtendedDns	Extended DNS event	false	boolean

Update Account Policy - body - driver

Name	Description	Required	Value
dvEventTypeDriverLoad	Driver Load	false	boolean

Update Account Policy - body - externalDeviceActivity

Name	Description	Required	Value
------	-------------	----------	-------

dvEventTypeExternalDeviceConnect	External Device Connect Event Type	false	boolean
dvEventTypeExternalDeviceDisconnect	External Device Disconnect Event Type	false	boolean

Update Account Policy - body - file

Name	Description	Required	Value
dvEventTypeFileCreation	File Creation Event Type	false	boolean
dvEventTypeFileDeletion	File Deletion Event Type	false	boolean
dvEventTypeFileModification	File Modification Event Type	false	boolean
dvEventTypeFileRename	File Rename Event Type	false	boolean
fullDiskScan	File Scan Event Type	false	boolean

Update Account Policy - body - ip

Name	Description	Required	Value
dvEventTypeIpConnect	IP Connect Event Type	false	boolean
dvEventTypeIpListen	IP Listen Event Type	false	boolean

Update Account Policy - body - login

Name	Description	Required	Value
dvEventTypeLoginLoggedIn	User Login Event Type	false	boolean
dvEventTypeLoginLoggedOut	User Logout Event Type	false	boolean

Update Account Policy - body - namedPipe

Name	Description	Required	Value
dvEventTypeNamedPipeConnection	Named Pipe Connection Event Type	false	boolean
dvEventTypeNamedPipeCreation	Named Pipe Creation Event Type	false	boolean

Update Account Policy - body - namedPipeExtended

Name	Description	Required	Value
namedPipeExtended	Named Pipe Connection Extended Event Type	false	boolean

Update Account Policy - body - openDirectoryActivity

Name	Description	Required	Value
dvEventTypeOpenDirectoryAddAttributeValue	Add Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryAddMemberToGroup	Add Member to Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateGroup	Create Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateUser	Create User Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteGroup	Delete Group Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteUser	Delete User Event Type	false	boolean
dvEventTypeOpenDirectoryDisableUser	Disable User Event Type	false	boolean
dvEventTypeOpenDirectoryEnableUser	Enable User Event Type	false	boolean
dvEventTypeOpenDirectoryModifyPassword	Modify Password Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveAttributeValue	Remove Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveMemberFromGroup	Remove Member from Group Event Type	false	boolean
dvEventTypeOpenDirectorySetAttributeValues	Set Attribute Values Event Type	false	boolean
dvEventTypeOpenDirectorySetMembersOfGroup	Set Members of Group Event Type	false	boolean

Update Account Policy - body - process

Name	Description	Required	Value
dvEventTypeProcessCreation	Process Creation Event Type	false	boolean
dvEventTypeProcessExit	Process Exit Event Type	false	boolean
dvEventTypeProcessModification	Process Termination Event Type	false	boolean

Update Account Policy - body - profileActivity

Name	Description	Required	Value
dvEventTypeProfileAddition	Profile Addition Event Type	false	boolean
dvEventTypeProfileRemoval	Profile Removal Event Type	false	boolean

Update Account Policy - body - registry

Name	Description	Required	Value
dvEventTypeRegistryKeyCreated	Registry Key Created Event Type	false	boolean
dvEventTypeRegistryKeyDelete	Registry Key Delete Event Type	false	boolean
dvEventTypeRegistryKeyExport	Registry Key Export Event Type	false	boolean
dvEventTypeRegistryKeyImport	Registry Key Import Event Type	false	boolean
dvEventTypeRegistryKeyRename	Registry Key Rename Event Type	false	boolean
dvEventTypeRegistryKeySecurityChanged	Registry Key Security Changed Event Type	false	boolean
dvEventTypeRegistryValueCreated	Registry Value Crated Event Type	false	boolean
dvEventTypeRegistryValueDeleted	Registry Value Deleted Event Type	false	boolean
dvEventTypeRegistryValueModified	Registry Value Modified Event Type	false	boolean

Update Account Policy - body - scheduledTask

Name	Description	Required	Value
------	-------------	----------	-------

dvEventTypeScheduledTaskDelete	Scheduled Task Delete Event Type	false	boolean
dvEventTypeScheduledTaskRegister	Scheduled Task Register Event Type	false	boolean
dvEventTypeScheduledTaskStart	Scheduled Task Start Event Type	false	boolean
dvEventTypeScheduledTaskTrigger	Scheduled Task Trigeer Event Type	false	boolean
dvEventTypeScheduledTaskUpdate	Scheduled Task Update Event Type	false	boolean

Update Account Policy - body - smartFileMonitoring

Name	Description	Required	Value
smartFileMonitoring	Smart file monitoring	false	boolean

Update Account Policy - body - url

Name	Description	Required	Value
dvEventTypeUrl	URL Actions event	false	boolean

Update Account Policy - body - userSubstitution

Name	Description	Required	Value
dvEventTypeSu	su Event Type	false	boolean
dvEventTypeSudo	sudo Event Type	false	boolean

Update Account Policy - body - windowsEventLogs

Name	Description	Required	Value
dvEventTypeWindowsEventLogCreation	Windows Event Log Creation Event Type	false	boolean

Update Account Policy - body - windowsEventLogsExtended

Name	Description	Required	Value
windowsEventLogsExtended	Windows Event Log Extended Event Type	false	boolean

Update Account Policy - body - engines

Name	Description	Required	Value
applicationControl	application control	false	enum
applicationDetection	application detection	false	enum
dataFiles	data files	false	enum
driftDetection	drift detection	false	enum
executables	executables	false	enum
exploits	exploits	false	enum
idr	idr	false	enum
lateralMovement	lateral movement	false	enum
networkProtection	network protection	false	enum
penetration	penetration	false	enum
preExecution	on-write	false	enum
preExecutionSuspicious	pre execution suspicious	false	enum
pup	potentially unwanted applications (PUP)	false	enum
remoteShell	remote shell	false	enum
reputation	reputation	false	enum

Update Account Policy - body - forensicsAutoTriggering

Name	Description	Required	Value
linuxEnabled	True if linux forensics is enabled	false	boolean
linuxProfileId	The profile id for the linux forensics	false	string
linuxProfileName	The profile name for the linux forensics	false	string
macosEnabled	True if macos forensics is enabled	false	boolean

macosProfileId	The profile id for the macos forensics	false	string
macosProfileName	The profile name for the macos forensics	false	string
windowsEnabled	True if windows forensics is enabled	false	boolean
windowsProfileId	The profile id for the windows forensics	false	string
windowsProfileName	The profile name for the windows forensics	false	string

Update Account Policy - body - identityConfigurationSettings

Name	Description	Required	Value
identityMaxCpuThreshold	Identity maximum CPU threshold	false	integer
identityMaxDefinedMemoryLimit	Identity maximum defined memory limit in MB	false	integer
identityMaxMemoryLimit	Identity maximum memory limit in MB	false	integer
identityMaxMemoryUsage	Identity maximum memory usage	false	integer
identityThresholdMonitoring	True if Identity threshold monitoring is enabled	false	boolean

Update Account Policy - body - iocAttributes

Name	Description	Required	Value
autoInstallBrowserExtensions	Update auto install browser extensions	false	boolean
behavioralIndicators	Update behavioral indicators	false	boolean
commandScripts	Update command scripts	false	boolean
crossProcess	Update cross process	false	boolean
dataMasking	Update data masking	false	boolean
dllModuleLoad	Update DLL module load	false	boolean
dns	Network event - DNS	false	boolean
driver	Driver	false	boolean

externalDeviceActivity	External Device Activity	false	boolean
fds	Full disk scan	false	boolean
file	File event	false	boolean
ip	Network event - IP	false	boolean
login	User login/logout event	false	boolean
namedPipe	Named Pipe	false	boolean
namedPipeExtended	Named Pipe Extended	false	boolean
openDirectoryActivity	Open Directory Activity	false	boolean
process	Process creation event	false	boolean
profileActivity	Profile Activity	false	boolean
registry	Registry event	false	boolean
scheduledTask	Scheduled task event	false	boolean
smartFileMonitoring	Smart file monitoring	false	boolean
url	loc URI	false	boolean
userSubstitution	User Substitution	false	boolean
windowsEventLogs	Windows Event Log	false	boolean
windowsEventLogsExtended	Windows Event Log Extended	false	boolean

Update Account Policy - body - remoteOpsForensics

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection process	false	integer
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Update Account Policy - body - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Global Policy

GET /web/api/v2.1/tenant/policy

Get the Global policy. This is the default policy for your deployment. See also: Get Policy.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

404 - Policy not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Global Policy - response - data table

errors	Errors	false	array
--------	--------	-------	-------

Global Policy - response - data

Name	Description	Required	Value
agentLoggingOn	True if logging is enabled in the agent	false	boolean
agentNotification	[DEPRECATED] Show end point notification on suspicious.Replaced by 'show_suspicious' in the agent UI section	false	boolean
agentUi	Agent ui	false	see Global Policy - response - agentUi table
agentUiOn	[DEPRECATED] Show/hide Agent UI. Moved inside the agent UI section	false	boolean
allowRemoteShell	True if Remote Shell is enabled for the scope	false	boolean
allowUnprotectByApprovedProcess	Allow Unprotect By Approved Process on/off	false	boolean
antiTamperingOn	Anti tampering on/off	false	boolean
autoDecommissionDays	Automatic decommission period in days	false	integer
autoDecommissionOn	Auto decommission on	false	boolean
autoFileUpload	Automatic file upload configuration	false	see Global Policy - response - autoFileUpload table
autoImmuneOn	Automatic immune on/off - this value must be true since all policies are immune by default	false	boolean
autoMitigationAction	Default action for auto mitigation	false	string
cloudValidationOn	Cloud validation on	false	
createdAt	Timestamp of policy creation	false	string
driftDetectionDelayTime	Drift detection delay time in seconds	false	integer
driverBlocking	Suspicious driver blocking engine on/off	false	boolean
dvAttributesPerEventType	The DV attributes	false	see Global Policy - response - dvAttributesPerEventType table
engines	The engines statuses	false	see Global Policy - response - engines table
forensicsAutoTriggering	Forensics auto triggering configuration	false	see Global Policy - response - forensicsAutoTriggering table
fwForNetworkQuarantineEnabled	True if Firewall Control for Network	false	boolean

	Quarantine is enabled		
identityConfigurationSettings	Identity configuration	false	see Global Policy - response - identityConfigurationSettings table
identityEndpointReporting	Endpoint reporting level	false	enum
identityOn	Identity module on/off	false	boolean
identityReportInterval	Identity telemetry report interval in minutes	false	integer
identityThrottlingInterval	Identity duplicate command consolidation interval in minutes	false	integer
identityUpdateInterval	Identity update interval in minutes	false	integer
informationalAlertsOn	Informational alerts on/off	false	boolean
inheritedFrom	Indicates the parent scope from which this policy is inherited, or 'null' if it is not inherited (modified specifically for the current scope).	false	enum
ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Global Policy - response - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean
isDefault	True if this is the tenant policy	false	boolean
isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean
mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean
networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Global Policy - response - remoteOpsForensics table
remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Global Policy - response - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean

researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first registration	false	boolean
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

Global Policy - response - agentUi

Name	Description	Required	Value
agentUiOn	Agent ui on	false	boolean
contactCompany	Contact company	false	string
contactDirectMessage	Contact direct message	false	string
contactEmail	Contact email	false	string
contactFreeText	Contact free text	false	string
contactOther	Contact other	false	string
contactPhoneNumber	Contact phone number	false	string
contactSupportWebsite	Contact support website	false	string
devicePopUpNotifications	Device pop up notifications	false	boolean
maxEventAgeDays	Max event age days	false	integer
showAgentWarnings	Show agent warnings	false	boolean
showDeviceTab	Show device tab	false	boolean
showQuarantineTab	Show quarantine tab	false	boolean
showSupport	Show support	false	boolean
showSuspicious	Show suspicious	false	boolean
threatPopUpNotifications	Threat pop up notifications	false	boolean

Global Policy - response - autoFileUpload

Name	Description	Required	Value
enabled	Automatic file upload on/off	false	boolean
includeBenignFiles	Upload benign files	false	boolean
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum file size (MB) to upload	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalDiskUsage	Maximum local disk usage (MB) for uploaded files	false	integer
maxLocalDiskUsageLimit	Limit for the maximum local disk usage (MB) for uploaded files	false	integer

Global Policy - response - dvAttributesPerEventType

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	see Global Policy - response - autoInstallBrowserExtensions table
behavioralIndicators	Behavioral indicators event	false	see Global Policy - response - behavioralIndicators table
commandScripts	Command scripts event	false	see Global Policy - response - commandScripts table
crossProcess	Cross process event	false	see Global Policy - response - crossProcess table
dataMasking	Data masking	false	see Global Policy - response - dataMasking table
dllModuleLoad	DLL module load event	false	see Global Policy - response - dllModuleLoad table
dns	Network event - DNS	false	see Global Policy - response - dns table
driver	Driver	false	see Global Policy - response - driver table
externalDeviceActivity	External Device Activity	false	see Global Policy - response - externalDeviceActivity table
file	File event	false	see Global Policy - response - file table
ip	Network event - IP	false	see Global Policy - response - ip table
login	User login/logout event	false	see Global Policy - response - login table
namedPipe	Named Pipe	false	see Global Policy - response - namedPipe table

[see Global Policy - response - namedPipeExtended table](#)

namedPipeExtended	Named Pipe Extended	false	
openDirectoryActivity	Open Directory Activity	false	see Global Policy - response - openDirectoryActivity table
process	Process event	false	see Global Policy - response - process table
profileActivity	Profile Activity	false	see Global Policy - response - profileActivity table
registry	Registry event	false	see Global Policy - response - registry table
scheduledTask	Scheduled task event	false	see Global Policy - response - scheduledTask table
smartFileMonitoring	Smart file monitoring	false	see Global Policy - response - smartFileMonitoring table
url	URL Actions event	false	see Global Policy - response - url table
userSubstitution	User Substitution	false	see Global Policy - response - userSubstitution table
windowsEventLogs	Windows Event Log	false	see Global Policy - response - windowsEventLogs table
windowsEventLogsExtended	Windows Event Log Extended	false	see Global Policy - response - windowsEventLogsExtended table

Global Policy - response - autoInstallBrowserExtensions

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	boolean

Global Policy - response - behavioralIndicators

Name	Description	Required	Value
dvEventTypeBehavioralIndicators	Behavioral indicators event	false	boolean

Global Policy - response - commandScripts

Name	Description	Required	Value
dvEventTypeCommandScripts	Command scripts event	false	boolean

Global Policy - response - crossProcess

Name	Description	Required	Value
------	-------------	----------	-------

dvEventTypeCrossProcessDuplicateProcess	Duplicate Process Event Type	false	boolean
dvEventTypeCrossProcessDuplicateThread	Duplicate Thread Event Type	false	boolean
dvEventTypeCrossProcessOpenProcesses	Open Process Event Type	false	boolean
dvEventTypeCrossProcessRemoteThread	Remote Thread Event Type	false	boolean

Global Policy - response - dataMasking

Name	Description	Required	Value
dataMasking	Data masking	false	boolean

Global Policy - response - dllModuleLoad

Name	Description	Required	Value
dvEventTypeDllModuleLoad	DLL module load event	false	boolean

Global Policy - response - dns

Name	Description	Required	Value
dvEventTypeDns	Network event - DNS	false	boolean
dvEventTypeExtendedDns	Extended DNS event	false	boolean

Global Policy - response - driver

Name	Description	Required	Value
dvEventTypeDriverLoad	Driver Load	false	boolean

Global Policy - response - externalDeviceActivity

Name	Description	Required	Value
dvEventTypeExternalDeviceConnect	External Device Connect Event Type	false	boolean
dvEventTypeExternalDeviceDisconnect	External Device Disconnect Event Type	false	boolean

Global Policy - response - file

Name	Description	Required	Value
dvEventTypeFileCreation	File Creation Event Type	false	boolean
dvEventTypeFileDeletion	File Deletion Event Type	false	boolean
dvEventTypeFileModification	File Modification Event Type	false	boolean
dvEventTypeFileRename	File Rename Event Type	false	boolean
fullDiskScan	File Scan Event Type	false	boolean

Global Policy - response - ip

Name	Description	Required	Value
dvEventTypeIpConnect	IP Connect Event Type	false	boolean
dvEventTypeIpListen	IP Listen Event Type	false	boolean

Global Policy - response - login

Name	Description	Required	Value
dvEventTypeLoginLoggedIn	User Login Event Type	false	boolean
dvEventTypeLoginLoggedOut	User Logout Event Type	false	boolean

Global Policy - response - namedPipe

Name	Description	Required	Value
dvEventTypeNamedPipeConnection	Named Pipe Connection Event Type	false	boolean

dvEventTypeNamedPipeCreation	Named Pipe Creation Event Type	false	boolean
------------------------------	--------------------------------	-------	---------

Global Policy - response - namedPipeExtended

Name	Description	Required	Value
namedPipeExtended	Named Pipe Connection Extended Event Type	false	boolean

Global Policy - response - openDirectoryActivity

Name	Description	Required	Value
dvEventTypeOpenDirectoryAddAttributeValue	Add Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryAddMemberToGroup	Add Member to Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateGroup	Create Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateUser	Create User Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteGroup	Delete Group Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteUser	Delete User Event Type	false	boolean
dvEventTypeOpenDirectoryDisableUser	Disable User Event Type	false	boolean
dvEventTypeOpenDirectoryEnableUser	Enable User Event Type	false	boolean
dvEventTypeOpenDirectoryModifyPassword	Modify Password Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveAttributeValue	Remove Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveMemberFromGroup	Remove Member from Group Event Type	false	boolean
dvEventTypeOpenDirectorySetAttributeValues	Set Attribute Values Event Type	false	boolean

dvEventTypeOpenDirectorySetMembersOfGroup	Set Members of Group Event Type	false	boolean
---	---------------------------------	-------	---------

Global Policy - response - process

Name	Description	Required	Value
dvEventTypeProcessCreation	Process Creation Event Type	false	boolean
dvEventTypeProcessExit	Process Exit Event Type	false	boolean
dvEventTypeProcessModification	Process Termination Event Type	false	boolean

Global Policy - response - profileActivity

Name	Description	Required	Value
dvEventTypeProfileAddition	Profile Addition Event Type	false	boolean
dvEventTypeProfileRemoval	Profile Removal Event Type	false	boolean

Global Policy - response - registry

Name	Description	Required	Value
dvEventTypeRegistryKeyCreated	Registry Key Created Event Type	false	boolean
dvEventTypeRegistryKeyDelete	Registry Key Delete Event Type	false	boolean
dvEventTypeRegistryKeyExport	Registry Key Export Event Type	false	boolean
dvEventTypeRegistryKeyImport	Registry Key Import Event Type	false	boolean
dvEventTypeRegistryKeyRename	Registry Key Rename Event Type	false	boolean
dvEventTypeRegistryKeySecurityChanged	Registry Key Security Changed Event Type	false	boolean
dvEventTypeRegistryValueCreated	Registry Value Crated Event Type	false	boolean
dvEventTypeRegistryValueDeleted	Registry Value Deleted Event Type	false	boolean
dvEventTypeRegistryValueModified	Registry Value Modified Event Type	false	boolean

Global Policy - response - scheduledTask

Name	Description	Required	Value
dvEventTypeScheduledTaskDelete	Scheduled Task Delete Event Type	false	boolean
dvEventTypeScheduledTaskRegister	Scheduled Task Register Event Type	false	boolean
dvEventTypeScheduledTaskStart	Scheduled Task Start Event Type	false	boolean
dvEventTypeScheduledTaskTrigger	Scheduled Task Trigeer Event Type	false	boolean
dvEventTypeScheduledTaskUpdate	Scheduled Task Update Event Type	false	boolean

Global Policy - response - smartFileMonitoring

Name	Description	Required	Value
smartFileMonitoring	Smart file monitoring	false	boolean

Global Policy - response - url

Name	Description	Required	Value
dvEventTypeUrl	URL Actions event	false	boolean

Global Policy - response - userSubstitution

Name	Description	Required	Value
dvEventTypeSu	su Event Type	false	boolean
dvEventTypeSudo	sudo Event Type	false	boolean

Global Policy - response - windowsEventLogs

Name	Description	Required	Value
dvEventTypeWindowsEventLogCreation	Windows Event Log Creation Event Type	false	boolean

Global Policy - response - windowsEventLogsExtended

Name	Description	Required	Value
windowsEventLogsExtended	Windows Event Log Extended Event Type	false	boolean

Global Policy - response - engines

Name	Description	Required	Value
applicationControl	application control	false	enum
applicationDetection	application detection	false	enum
dataFiles	data files	false	enum
driftDetection	drift detection	false	enum
executables	executables	false	enum
exploits	exploits	false	enum
idr	idr	false	enum
lateralMovement	lateral movement	false	enum
networkProtection	network protection	false	enum
penetration	penetration	false	enum
preExecution	on-write	false	enum
preExecutionSuspicious	pre execution suspicious	false	enum
pup	potentially unwanted applications (PUP)	false	enum
remoteShell	remote shell	false	enum
reputation	reputation	false	enum

Global Policy - response - forensicsAutoTriggering

Name	Description	Required	Value
linuxEnabled	True if linux forensics is enabled	false	boolean
linuxProfileId	The profile id for the linux forensics	false	string
linuxProfileName	The profile name for the linux forensics	false	string
macosEnabled	True if macos forensics is enabled	false	boolean

macosProfileId	The profile id for the macos forensics	false	string
macosProfileName	The profile name for the macos forensics	false	string
windowsEnabled	True if windows forensics is enabled	false	boolean
windowsProfileId	The profile id for the windows forensics	false	string
windowsProfileName	The profile name for the windows forensics	false	string

Global Policy - response - identityConfigurationSettings

Name	Description	Required	Value
identityMaxCpuThreshold	Identity maximum CPU threshold	false	integer
identityMaxDefinedMemoryLimit	Identity maximum defined memory limit in MB	false	integer
identityMaxMemoryLimit	Identity maximum memory limit in MB	false	integer
identityMaxMemoryUsage	Identity maximum memory usage	false	integer
identityThresholdMonitoring	True if Identity threshold monitoring is enabled	false	boolean

Global Policy - response - iocAttributes

Name	Description	Required	Value
autoInstallBrowserExtensions	Update auto install browser extensions	false	boolean
behavioralIndicators	Update behavioral indicators	false	boolean
commandScripts	Update command scripts	false	boolean
crossProcess	Update cross process	false	boolean
dataMasking	Update data masking	false	boolean
dllModuleLoad	Update DLL module load	false	boolean
dns	Network event - DNS	false	boolean
driver	Driver	false	boolean

externalDeviceActivity	External Device Activity	false	boolean
fds	Full disk scan	false	boolean
file	File event	false	boolean
ip	Network event - IP	false	boolean
login	User login/logout event	false	boolean
namedPipe	Named Pipe	false	boolean
namedPipeExtended	Named Pipe Extended	false	boolean
openDirectoryActivity	Open Directory Activity	false	boolean
process	Process creation event	false	boolean
profileActivity	Profile Activity	false	boolean
registry	Registry event	false	boolean
scheduledTask	Scheduled task event	false	boolean
smartFileMonitoring	Smart file monitoring	false	boolean
url	loc URI	false	boolean
userSubstitution	User Substitution	false	boolean
windowsEventLogs	Windows Event Log	false	boolean
windowsEventLogsExtended	Windows Event Log Extended	false	boolean

Global Policy - response - remoteOpsForensics

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection process	false	integer
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Global Policy - response - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Update Global Policy

PUT /web/api/v2.1/tenant/policy

Change the policy of your deployment. Best practice: Get the Global policy before you attempt to change it. See also: Get Policy. You must be a Global Admin user to change the Global Policy.

BEST PRACTICE

Get the Global policy before you attempt to change it. See also: Get Policy. You must be a Global Admin user to change the Global Policy.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

404 - Policy not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Update Global Policy - response - data table
errors	Errors	false	array

Update Global Policy - response - data

Name	Description	Required	Value
agentLoggingOn	True if logging is enabled in the agent	false	boolean
agentNotification	[DEPRECATED] Show end point notification on suspicious.Replaced by 'show_suspicious' in the agent UI section	false	boolean
agentUi	Agent ui	false	see Update Global Policy - response - agentUi table
agentUiOn	[DEPRECATED] Show/hide Agent UI. Moved inside the agent UI section	false	boolean
allowRemoteShell	True if Remote Shell is enabled for the scope	false	boolean
allowUnprotectByApprovedProcess	Allow Unprotect By Approved Process on/off	false	boolean
antiTamperingOn	Anti tampering on/off	false	boolean
autoDecommissionDays	Automatic decommission period in days	false	integer
autoDecommissionOn	Auto decommission on	false	boolean
autoFileUpload	Automatic file upload configuration	false	see Update Global Policy - response - autoFileUpload table
autoImmuneOn	Automatic immune on/off - this value must be true since all policies are immune by default	false	boolean
autoMitigationAction	Default action for auto mitigation	false	string
cloudValidationOn	Cloud validation on	false	
createdAt	Timestamp of policy creation	false	string
driftDetectionDelayTime	Drift detection delay time in seconds	false	integer
driverBlocking	Suspicious driver blocking engine on/off	false	boolean
dvAttributesPerEventType	The DV attributes	false	see Update Global Policy - response - dvAttributesPerEventType table
engines	The engines statuses	false	see Update Global Policy - response - engines table
forensicsAutoTriggering	Forensics auto triggering configuration	false	see Update Global Policy - response - forensicsAutoTriggering table
fwForNetworkQuarantineEnabled	True if Firewall Control for Network	false	boolean

	Quarantine is enabled		
identityConfigurationSettings	Identity configuration	false	see Update Global Policy - response - identityConfigurationSettings table
identityEndpointReporting	Endpoint reporting level	false	enum
identityOn	Identity module on/off	false	boolean
identityReportInterval	Identity telemetry report interval in minutes	false	integer
identityThrottlingInterval	Identity duplicate command consolidation interval in minutes	false	integer
identityUpdateInterval	Identity update interval in minutes	false	integer
informationalAlertsOn	Informational alerts on/off	false	boolean
inheritedFrom	Indicates the parent scope from which this policy is inherited, or 'null' if it is not inherited (modified specifically for the current scope).	false	enum
ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Update Global Policy - response - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean
isDefault	True if this is the tenant policy	false	boolean
isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean
mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean
networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Update Global Policy - response - remoteOpsForensics table
remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Update Global Policy - response - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean

researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first registration	false	boolean
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

Update Global Policy - response - agentUi

Name	Description	Required	Value
agentUiOn	Agent ui on	false	boolean
contactCompany	Contact company	false	string
contactDirectMessage	Contact direct message	false	string
contactEmail	Contact email	false	string
contactFreeText	Contact free text	false	string
contactOther	Contact other	false	string
contactPhoneNumber	Contact phone number	false	string
contactSupportWebsite	Contact support website	false	string
devicePopUpNotifications	Device pop up notifications	false	boolean
maxEventAgeDays	Max event age days	false	integer
showAgentWarnings	Show agent warnings	false	boolean
showDeviceTab	Show device tab	false	boolean
showQuarantineTab	Show quarantine tab	false	boolean
showSupport	Show support	false	boolean
showSuspicious	Show suspicious	false	boolean
threatPopUpNotifications	Threat pop up notifications	false	boolean

Update Global Policy - response - autoFileUpload

Name	Description	Required	Value
enabled	Automatic file upload on/off	false	boolean
includeBenignFiles	Upload benign files	false	boolean
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum file size (MB) to upload	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalDiskUsage	Maximum local disk usage (MB) for uploaded files	false	integer
maxLocalDiskUsageLimit	Limit for the maximum local disk usage (MB) for uploaded files	false	integer

Update Global Policy - response - dvAttributesPerEventType

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	see Update Global Policy - response - autoInstallBrowserExtensions table
behavioralIndicators	Behavioral indicators event	false	see Update Global Policy - response - behavioralIndicators table
commandScripts	Command scripts event	false	see Update Global Policy - response - commandScripts table
crossProcess	Cross process event	false	see Update Global Policy - response - crossProcess table
dataMasking	Data masking	false	see Update Global Policy - response - dataMasking table
dllModuleLoad	DLL module load event	false	see Update Global Policy - response - dllModuleLoad table
dns	Network event - DNS	false	see Update Global Policy - response - dns table
driver	Driver	false	see Update Global Policy - response - driver table
externalDeviceActivity	External Device Activity	false	see Update Global Policy - response - externalDeviceActivity table
file	File event	false	see Update Global Policy - response - file table
ip	Network event - IP	false	see Update Global Policy - response - ip table
login	User login/logout event	false	see Update Global Policy - response - login table
namedPipe	Named Pipe	false	see Update Global Policy - response - namedPipe table

[see Update Global Policy - response - namedPipeExtended table](#)

namedPipeExtended	Named Pipe Extended	false	
openDirectoryActivity	Open Directory Activity	false	see Update Global Policy - response - openDirectoryActivity table
process	Process event	false	see Update Global Policy - response - process table
profileActivity	Profile Activity	false	see Update Global Policy - response - profileActivity table
registry	Registry event	false	see Update Global Policy - response - registry table
scheduledTask	Scheduled task event	false	see Update Global Policy - response - scheduledTask table
smartFileMonitoring	Smart file monitoring	false	see Update Global Policy - response - smartFileMonitoring table
url	URL Actions event	false	see Update Global Policy - response - url table
userSubstitution	User Substitution	false	see Update Global Policy - response - userSubstitution table
windowsEventLogs	Windows Event Log	false	see Update Global Policy - response - windowsEventLogs table
windowsEventLogsExtended	Windows Event Log Extended	false	see Update Global Policy - response - windowsEventLogsExtended table

Update Global Policy - response - autoInstallBrowserExtensions

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	boolean

Update Global Policy - response - behavioralIndicators

Name	Description	Required	Value
dvEventTypeBehavioralIndicators	Behavioral indicators event	false	boolean

Update Global Policy - response - commandScripts

Name	Description	Required	Value
dvEventTypeCommandScripts	Command scripts event	false	boolean

Update Global Policy - response - crossProcess

Name	Description	Required	Value
------	-------------	----------	-------

dvEventTypeCrossProcessDuplicateProcess	Duplicate Process Event Type	false	boolean
dvEventTypeCrossProcessDuplicateThread	Duplicate Thread Event Type	false	boolean
dvEventTypeCrossProcessOpenProcesses	Open Process Event Type	false	boolean
dvEventTypeCrossProcessRemoteThread	Remote Thread Event Type	false	boolean

Update Global Policy - response - dataMasking

Name	Description	Required	Value
dataMasking	Data masking	false	boolean

Update Global Policy - response - dllModuleLoad

Name	Description	Required	Value
dvEventTypeDllModuleLoad	DLL module load event	false	boolean

Update Global Policy - response - dns

Name	Description	Required	Value
dvEventTypeDns	Network event - DNS	false	boolean
dvEventTypeExtendedDns	Extended DNS event	false	boolean

Update Global Policy - response - driver

Name	Description	Required	Value
dvEventTypeDriverLoad	Driver Load	false	boolean

Update Global Policy - response - externalDeviceActivity

Name	Description	Required	Value
dvEventTypeExternalDeviceConnect	External Device Connect Event Type	false	boolean
dvEventTypeExternalDeviceDisconnect	External Device Disconnect Event Type	false	boolean

Update Global Policy - response - file

Name	Description	Required	Value
dvEventTypeFileCreation	File Creation Event Type	false	boolean
dvEventTypeFileDeletion	File Deletion Event Type	false	boolean
dvEventTypeFileModification	File Modification Event Type	false	boolean
dvEventTypeFileRename	File Rename Event Type	false	boolean
fullDiskScan	File Scan Event Type	false	boolean

Update Global Policy - response - ip

Name	Description	Required	Value
dvEventTypeIpConnect	IP Connect Event Type	false	boolean
dvEventTypeIpListen	IP Listen Event Type	false	boolean

Update Global Policy - response - login

Name	Description	Required	Value
dvEventTypeLoginLoggedIn	User Login Event Type	false	boolean
dvEventTypeLoginLoggedOut	User Logout Event Type	false	boolean

Update Global Policy - response - namedPipe

Name	Description	Required	Value
dvEventTypeNamedPipeConnection	Named Pipe Connection Event Type	false	boolean

dvEventTypeNamedPipeCreation	Named Pipe Creation Event Type	false	boolean
------------------------------	--------------------------------	-------	---------

Update Global Policy - response - namedPipeExtended

Name	Description	Required	Value
namedPipeExtended	Named Pipe Connection Extended Event Type	false	boolean

Update Global Policy - response - openDirectoryActivity

Name	Description	Required	Value
dvEventTypeOpenDirectoryAddAttributeValue	Add Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryAddMemberToGroup	Add Member to Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateGroup	Create Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateUser	Create User Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteGroup	Delete Group Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteUser	Delete User Event Type	false	boolean
dvEventTypeOpenDirectoryDisableUser	Disable User Event Type	false	boolean
dvEventTypeOpenDirectoryEnableUser	Enable User Event Type	false	boolean
dvEventTypeOpenDirectoryModifyPassword	Modify Password Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveAttributeValue	Remove Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveMemberFromGroup	Remove Member from Group Event Type	false	boolean
dvEventTypeOpenDirectorySetAttributeValues	Set Attribute Values Event Type	false	boolean

dvEventTypeOpenDirectorySetMembersOfGroup	Set Members of Group Event Type	false	boolean
---	---------------------------------	-------	---------

Update Global Policy - response - process

Name	Description	Required	Value
dvEventTypeProcessCreation	Process Creation Event Type	false	boolean
dvEventTypeProcessExit	Process Exit Event Type	false	boolean
dvEventTypeProcessModification	Process Termination Event Type	false	boolean

Update Global Policy - response - profileActivity

Name	Description	Required	Value
dvEventTypeProfileAddition	Profile Addition Event Type	false	boolean
dvEventTypeProfileRemoval	Profile Removal Event Type	false	boolean

Update Global Policy - response - registry

Name	Description	Required	Value
dvEventTypeRegistryKeyCreated	Registry Key Created Event Type	false	boolean
dvEventTypeRegistryKeyDelete	Registry Key Delete Event Type	false	boolean
dvEventTypeRegistryKeyExport	Registry Key Export Event Type	false	boolean
dvEventTypeRegistryKeyImport	Registry Key Import Event Type	false	boolean
dvEventTypeRegistryKeyRename	Registry Key Rename Event Type	false	boolean
dvEventTypeRegistryKeySecurityChanged	Registry Key Security Changed Event Type	false	boolean
dvEventTypeRegistryValueCreated	Registry Value Crated Event Type	false	boolean
dvEventTypeRegistryValueDeleted	Registry Value Deleted Event Type	false	boolean
dvEventTypeRegistryValueModified	Registry Value Modified Event Type	false	boolean

Update Global Policy - response - scheduledTask

Name	Description	Required	Value
dvEventTypeScheduledTaskDelete	Scheduled Task Delete Event Type	false	boolean
dvEventTypeScheduledTaskRegister	Scheduled Task Register Event Type	false	boolean
dvEventTypeScheduledTaskStart	Scheduled Task Start Event Type	false	boolean
dvEventTypeScheduledTaskTrigger	Scheduled Task Trigeer Event Type	false	boolean
dvEventTypeScheduledTaskUpdate	Scheduled Task Update Event Type	false	boolean

Update Global Policy - response - smartFileMonitoring

Name	Description	Required	Value
smartFileMonitoring	Smart file monitoring	false	boolean

Update Global Policy - response - url

Name	Description	Required	Value
dvEventTypeUrl	URL Actions event	false	boolean

Update Global Policy - response - userSubstitution

Name	Description	Required	Value
dvEventTypeSu	su Event Type	false	boolean
dvEventTypeSudo	sudo Event Type	false	boolean

Update Global Policy - response - windowsEventLogs

Name	Description	Required	Value
dvEventTypeWindowsEventLogCreation	Windows Event Log Creation Event Type	false	boolean

Update Global Policy - response - windowsEventLogsExtended

Name	Description	Required	Value
windowsEventLogsExtended	Windows Event Log Extended Event Type	false	boolean

Update Global Policy - response - engines

Name	Description	Required	Value
applicationControl	application control	false	enum
applicationDetection	application detection	false	enum
dataFiles	data files	false	enum
driftDetection	drift detection	false	enum
executables	executables	false	enum
exploits	exploits	false	enum
idr	idr	false	enum
lateralMovement	lateral movement	false	enum
networkProtection	network protection	false	enum
penetration	penetration	false	enum
preExecution	on-write	false	enum
preExecutionSuspicious	pre execution suspicious	false	enum
pup	potentially unwanted applications (PUP)	false	enum
remoteShell	remote shell	false	enum
reputation	reputation	false	enum

Update Global Policy - response - forensicsAutoTriggering

Name	Description	Required	Value
linuxEnabled	True if linux forensics is enabled	false	boolean
linuxProfileId	The profile id for the linux forensics	false	string
linuxProfileName	The profile name for the linux forensics	false	string
macosEnabled	True if macos forensics is enabled	false	boolean

macosProfileId	The profile id for the macos forensics	false	string
macosProfileName	The profile name for the macos forensics	false	string
windowsEnabled	True if windows forensics is enabled	false	boolean
windowsProfileId	The profile id for the windows forensics	false	string
windowsProfileName	The profile name for the windows forensics	false	string

Update Global Policy - response - identityConfigurationSettings

Name	Description	Required	Value
identityMaxCpuThreshold	Identity maximum CPU threshold	false	integer
identityMaxDefinedMemoryLimit	Identity maximum defined memory limit in MB	false	integer
identityMaxMemoryLimit	Identity maximum memory limit in MB	false	integer
identityMaxMemoryUsage	Identity maximum memory usage	false	integer
identityThresholdMonitoring	True if Identity threshold monitoring is enabled	false	boolean

Update Global Policy - response - iocAttributes

Name	Description	Required	Value
autoInstallBrowserExtensions	Update auto install browser extensions	false	boolean
behavioralIndicators	Update behavioral indicators	false	boolean
commandScripts	Update command scripts	false	boolean
crossProcess	Update cross process	false	boolean
dataMasking	Update data masking	false	boolean
dllModuleLoad	Update DLL module load	false	boolean
dns	Network event - DNS	false	boolean
driver	Driver	false	boolean

externalDeviceActivity	External Device Activity	false	boolean
fds	Full disk scan	false	boolean
file	File event	false	boolean
ip	Network event - IP	false	boolean
login	User login/logout event	false	boolean
namedPipe	Named Pipe	false	boolean
namedPipeExtended	Named Pipe Extended	false	boolean
openDirectoryActivity	Open Directory Activity	false	boolean
process	Process creation event	false	boolean
profileActivity	Profile Activity	false	boolean
registry	Registry event	false	boolean
scheduledTask	Scheduled task event	false	boolean
smartFileMonitoring	Smart file monitoring	false	boolean
url	loc URI	false	boolean
userSubstitution	User Substitution	false	boolean
windowsEventLogs	Windows Event Log	false	boolean
windowsEventLogsExtended	Windows Event Log Extended	false	boolean

Update Global Policy - response - remoteOpsForensics

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection process	false	integer
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Update Global Policy - response - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Update Global Policy - body - data table

Update Global Policy - body - data

Name	Description	Required	Value
agentLoggingOn	True if logging is enabled in the agent	false	boolean
agentNotification	[DEPRECATED] Show end point notification on suspicious.Replaced by 'show_suspicious' in the agent UI section	false	boolean
agentUi	Agent ui	false	see Update Global Policy - body - agentUi table
agentUiOn	[DEPRECATED] Show/hide Agent UI. Moved inside the agent UI section	false	boolean
allowRemoteShell	True if Remote Shell is enabled for the scope	false	boolean
allowUnprotectByApprovedProcess	Allow Unprotect By Approved Process on/off	false	boolean
antiTamperingOn	Anti tampering on/off	false	boolean
autoDecommissionDays	Automatic decommission period in days	false	integer
autoDecommissionOn	Auto decommission on	false	boolean
autoFileUpload	Automatic file upload configuration	false	see Update Global Policy - body - autoFileUpload table
autoImmuneOn	Automatic immune on/off - this value must be true since all policies are immune by default	false	boolean
autoMitigationAction	Default action for auto mitigation	false	string
cloudValidationOn	Cloud validation on	false	
createdAt	Timestamp of policy creation	false	string
driftDetectionDelayTime	Drift detection delay time in seconds	false	integer
driverBlocking	Suspicious driver blocking engine on/off	false	boolean
dvAttributesPerEventType	The DV attributes	false	see Update Global Policy - body - dvAttributesPerEventType table
engines	The engines statuses	false	see Update Global Policy - body - engines table
forensicsAutoTriggering	Forensics auto triggering configuration	false	see Update Global Policy - body - forensicsAutoTriggering table
identityConfigurationSettings	Identity configuration	false	see Update Global Policy - body - identityConfigurationSettings table

identityEndpointReporting	Endpoint reporting level	false	enum
identityOn	Identity module on/off	false	boolean
identityReportInterval	Identity telemetry report interval in minutes	false	integer
identityThrottlingInterval	Identity duplicate command consolidation interval in minutes	false	integer
identityUpdateInterval	Identity update interval in minutes	false	integer
informationalAlertsOn	Informational alerts on/off	false	boolean
inheritedFrom	Indicates the parent scope from which this policy is inherited, or 'null' if it is not inherited (modified specifically for the current scope).	false	enum
ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Update Global Policy - body - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean
isDefault	True if this is the tenant policy	false	boolean
isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean
mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean
networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Update Global Policy - body - remoteOpsForensics table
remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Update Global Policy - body - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean
researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first	false	boolean

	registration		
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

Update Global Policy - body - agentUi

Name	Description	Required	Value

maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

RBAC

Get All Roles

GET /web/api/v2.1/rbac/roles

See roles assigned to users that match the filter, a basic description of the roles, and the number of users for each role.

Role-Based Access Control (RBAC) has predefined roles. (Currently, customized roles are not supported.), This command gives the ID of the role, which you can use in other commands.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
accountname	optional	Name of the account that contains the role
countonly	optional	If true, only total number of items will be returned, without any of

		the actual objects.
createdat	optional	Created at. Example: "2018-02-27T04:49:26.257525Z".
createdat__between	optional	Return RBAC roles created within this range (inclusive). Example: "1514978764288-1514978999999".
createdat__gt	optional	Return RBAC roles created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Return RBAC roles created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Return RBAC roles created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Return RBAC roles created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
creator	optional	Email of the creating user
creatorid	optional	Id of the creating user. Example: "225494730938493804".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
description	optional	Description
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of ids to filter by. Example: "225494730938493804,225494730938493915".
includechildren	optional	Include child scopes roles
includeparents	optional	Include parent scopes roles
limit	optional	Limit number of returned items (1-1000). Example: "10".
name	optional	Return RBAC role matching the name
predefinedrole	optional	Filter only system/custom roles
query	optional	Free text search on role name, and description
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
sitename	optional	Name of the site that contains the role
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".

skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
tenancyids	optional	List of Tenancies IDs to filter by. Example: "225494730938493804,225494730938493915".
tenant	optional	Indicates a tenant scope request
updatedat	optional	Updated at. Example: "2018-02-27T04:49:26.257525Z".
updatedat__between	optional	Return RBAC roles updated within this range (inclusive). Example: "1514978764288-1514978999999".
updatedat__gt	optional	Return RBAC roles updated after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Return RBAC roles updated after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Return RBAC roles updated before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Return RBAC roles updated before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
updatedby	optional	Email of the updating user
updatedbyid	optional	Id of the updating user. Example: "225494730938493804".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get All Roles - response - pagination table
data	Response data	false	see Get All Roles - response - data table
errors	Errors	false	array

Get All Roles - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get All Roles - response - data

Name	Description	Required	Value
accountName	Account name	false	string
createdAt	Created at	false	string
creator	Email of the creating user	false	string
creatorId	Id of the creating user	false	string
description	Description	false	string
id	Id	false	string
name	Name	false	string
predefinedRole	Whether this role is a system role	false	boolean
scope	Scope of the role (Group/Site/Account/Tenant)	false	string
scopeId	Id of the containing scope	false	string
siteName	Site name	false	string
updatedAt	Updated at	false	string
updatedBy	Email of the updating user	false	string
updatedById	Id of the creating user	false	string
usersInRoles	How many users use this role	false	integer

Get Specific Role Definition

GET /web/api/v2.1/rbac/role/{role_id}

With the ID of a role (see Get All Roles) you can see the permissions of that role.

The definition of a role can change in different scopes and SKUs. For example, an Admin role with the scope access of a Site does not have Network Discovery permissions, but an IT role with the scope access of an Account with a Network Discovery license does have permissions on Network Discovery.

The Response shows role permissions to see views in the WebUI and to use Console features.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
createdat__between	optional	Return RBAC roles created within this range (inclusive). Example: "1514978764288-15149789999999".
createdat__gt	optional	Return RBAC roles created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Return RBAC roles created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Return RBAC roles created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Return RBAC roles created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
name	optional	Return RBAC role matching the name
query	optional	Free text search on role name, and description
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
tenant	optional	Indicates a tenant scope request
updatedat__between	optional	Return RBAC roles updated within this range (inclusive). Example: "1514978764288-15149789999999".
updatedat__gt	optional	Return RBAC roles updated after this timestamp. Example: "2018-02-27T04:49:26.257525Z".

Remote Ops MMS

Create new Destination profile.

POST /web/api/v2.1/remote-ops/data-exporter/destination-profiles

Create Destination profile inside specified scope. If the created profile is requested to be default, the default profile of the specified scope is overridden.

Response Messages

200 - Successes

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Create new Destination profile. - response - data table
errors	Errors	false	array

Create new Destination profile. - response - data

Name	Description	Required	Value
profileId	Profile ID	true	string

Body Schema

Name	Description	Required	Value
apiKey	Write key of api account to upload data	true	string
apiUrl	URL of api instance to upload the events	true	string
destination	Destination profile type	true	enum
name	Destination profile name	true	string
scopeId	Scope ID to store the Destination profile	true	string
scopeLevel	Scope level to store the Destination profile	true	enum
isDefault	Flag if the profile should be marked as default in it's scope	false	boolean

Get available Destination profiles

GET /web/api/v2.1/remote-ops/data-exporter/destination-profiles

Get Destination profiles available for the specified scope. The profiles are inherited downwards, e.g. the profiles from parent Account and Tenant scopes are available for a Site. At most one of returned destination profiles will be marked as default for the scope. If the scope does not have default profile defined, it's inherited from the higher scope, unless inheritance was broken

Parameters

scopeid	optional	Scope ID to get Destination profiles configuration. Example: "225494730938493804".
scopelevel	optional	Scope level to get Destination profile configuration. Example: "tenant".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permission to perform such action

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get available Destination profiles - response - data table
errors	Errors	false	array

Get available Destination profiles - response - data

Name	Description	Required	Value
apiKey	Write key of destination account to upload data	true	string
apiUrl	URL of destination instance to upload data	true	string
creator	Email of user who created the Destination profile	true	string
creatorId	ID of user who created the Destination profile	true	string
destination	Destination type where the results will be uploaded	true	string
id	Destination profile ID	true	string
isDefault	Flag if the Destination profile is default for the scope	true	boolean
name	Destination profile name	true	string
scopePath	Path of scope where the Destination profile is stored	true	string
updater	Email of user who updated the Destination profile	true	string
updaterId	ID of user who updated the Destination profile	true	string

Delete multiple Destination profiles by ID

DELETE /web/api/v2.1/remote-ops/data-exporter/destination-profiles

Delete multiple Destination profiles. The profiles that are not possible to delete (e.g.non-existing or user does not have proper permissions) are skipped. IDs of successfully deleted profiles are returned in response.

Response Messages

200 - Delete was completed or partially completed.

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Delete multiple Destination profiles by ID - response - data table
errors	Errors	false	array

Delete multiple Destination profiles by ID - response - data

Name	Description	Required	Value
affected	Deleted Destination profile IDs	false	string []

Body Schema

Name	Description	Required	Value
data	Data	false	see Delete multiple Destination profiles by ID - body - data table
filter	Filter	false	see Delete multiple Destination profiles by ID - body - filter table

Delete multiple Destination profiles by ID - body - data

Delete multiple Destination profiles by ID - body - filter

Name	Description	Required	Value
ids	List of Destination profile IDs to delete	false	string []

Delete Destination profile by ID

DELETE /web/api/v2.1/remote-ops/data-exporter/destination-profiles/{profile_id}

Delete Destination profile with specified ID. If the profile was used as default for a scope, the last created profile will be marked as default for that scope.

Response Messages

200 - Destination profile is deleted

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permission to perform such action

404 - Destination profile is not found

Update existing Destination profile

PUT /web/api/v2.1/remote-ops/data-exporter/destination-profiles/{profile_id}

Update contents of existing Destination profile with specified ID. All the profile data should be specified, even if the values are not changed. If the updated profile is requested to be default, the default profile of its scope is modified.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permission to perform such action

404 - Destination profile is not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Update existing Destination profile - response - data table
errors	Errors	false	array

Name	Description	Required	Value
profileId	Profile ID	true	string

Body Schema

Name	Description	Required	Value
data	Data	true	see Update existing Destination profile - body - data table

Update existing Destination profile - body - data

Name	Description	Required	Value
apiKey	Write key of api account to upload data	true	string
apiUrl	URL of api instance to upload the events	true	string
name	Destination profile name	true	string
isDefault	Flag if the profile should be marked as default in it's scope	false	boolean

Get Destination profile by ID

GET /web/api/v2.1/remote-ops/data-exporter/destination-profiles/{profile_id}

Get Destination profile with specified ID

Parameters

scopeid	optional	Scope ID to get Destination profiles configuration. Example: "225494730938493804".
scopelevel	optional	Scope level to get Destination profile configuration. Example: "tenant".

Response Messages

200 - Get Destination profile

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permission to perform such action

404 - Destination profile is not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get Destination profile by ID - response - data table
errors	Errors	false	array

Get Destination profile by ID - response - data

Name	Description	Required	Value
apiKey	Write key of destination account to upload data	true	string
apiUrl	URL of destination instance to upload data	true	string
creator	Email of user who created the Destination profile	true	string
creatorId	ID of user who created the Destination profile	true	string
destination	Destination type where the results will be uploaded	true	string
id	Destination profile ID	true	string
isDefault	Flag if the Destination profile is default for the scope	true	boolean
name	Destination profile name	true	string
scopePath	Path of scope where the Destination profile is stored	true	string
updater	Email of user who updated the Destination profile	true	string
updaterId	ID of user who updated the Destination profile	true	string

Set profile as default profile of the scope

POST /web/api/v2.1/remote-ops/data-exporter/destination-profiles/set-default

Set profile as default profile of the scope

Response Messages

200 - Get Destination profile

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permission to perform such action

Body Schema

Name	Description	Required	Value
data	Data	true	see Set profile as default profile of the scope - body - data table

Set profile as default profile of the scope - body - data

Name	Description	Required	Value
profileId	Profile Id to set as default profile	true	string
scopeLevel	Scope level to get Destination profile configuration	true	enum
scopeId	Scope ID to get Destination profiles configuration	false	string

Get results sent to data exporter

GET /web/api/v2.1/remote-ops/data-exporter/results

Get results sent to data exporter

Parameters

agentId	required	Id of the agent the data came from
maliciousgroupId	optional	Threat malicious group id
taskId	optional	Task id

Response Messages

200 - Get Destination profile results

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permission to perform such action

Response Schema

Name	Description	Required	Value

Get available Scheduled Tasks

GET /web/api/v2.1/remote-ops/scheduled-tasks

Get available Scheduled Tasks

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__between	optional	Date range for creation time
creatorid	optional	IDs of creating user of scheduled task. Example: "225494730938493804,225494730938493915".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
description__contains	optional	Keyword to search in description
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
id__contains	optional	Keyword to search in task ID
ids	optional	A list of scheduled tasks ids. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".

name__contains	optional	Keyword to search in task name
ostypes	optional	List of the OS types. Example: "linux".
outputdestination	optional	List of the tasks types. Example: "SentinelCloud".
query	optional	Keyword to search in scheduled tasks profile name
scheduledtime__between	optional	Date range for scheduled execution time
scopename__contains	optional	Keyword to search in scope name
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
status	optional	List of the tasks status. Example: "scheduled".
targetscope	optional	IDs of target scopes of scheduled task. Example: "225494730938493804,225494730938493915".
type	optional	List of the tasks types. Example: "action".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permission to perform such action

Response Schema

clusterName__contains	Free-text filter by cluster name (supports multiple values)	false	string []

computerName	Computer name	false	string
computerName__contains	Free-text filter by computer name (supports multiple values)	false	string []
computerName__like	Match computer name partially (substring)	false	string
computerNameOrUuid__contains	Free-text filter by computer name or uuid (supports multiple values)	false	string []
consoleMigrationStatuses	Migration status in	false	string []
consoleMigrationStatusesNin	Migration status nin	false	string []
containerizedWorkloadCounts	Containerized workload counts	false	see Start collection of Forensics artifacts according to specified profile - body - containerizedWorkloadCounts table
coreCount__between	Possible number of CPU cores (inclusive)	false	string
coreCount__gt	CPU cores (more than)	false	integer
coreCount__gte	CPU cores (more than or equal)	false	integer
coreCount__lt	CPU cores (less than)	false	integer
coreCount__lte	CPU cores (less than or equal)	false	integer
cpuCount__between	Possible number of CPU cores (inclusive)	false	string
cpuCount__gt	Number of CPUs (more than)	false	integer
cpuCount__gte	Number of CPUs (more than or equal)	false	integer
cpuCount__lt	Number of CPUs (less than)	false	integer
cpuCount__lte	Number of CPUs (less than or equal)	false	integer
cpuld__contains	Free-text filter by CPU name (supports multiple values)	false	string []
createdAt__between	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
createdAt__gt	Agents created after this timestamp	false	string
createdAt__gte	Agents created after or at this timestamp	false	string
createdAt__lt	Agents created before this timestamp	false	string
createdAt__lte	Agents created before or at this timestamp	false	string
csvFilterId	The ID of the CSV file to filter by	false	string
decommissionedAt__between	Date range for decommission time	false	string

	(format: <from_timestamp>-<to_timestamp>, inclusive)		
decommissionedAt__gt	Agents decommissioned after this timestamp	false	string
decommissionedAt__gte	Agents decommissioned after or at this timestamp	false	string
decommissionedAt__lt	Agents decommissioned before this timestamp	false	string
decommissionedAt__lte	Agents decommissioned before this timestamp	false	string
domains	Included network domains	false	string []
domainsNin	Not included network domains	false	string []
ecsClusterName__contains	Free-text filter by ECS cluster name	false	string []
ecsServiceArn__contains	Free-text filter by ECS service arn	false	string []
ecsServiceName__contains	Free-text filter by ECS service name	false	string []
ecsTaskArn__contains	Free-text filter by ECS task arn	false	string []
ecsTaskAvailabilityZone__contains	Free-text filter by ECS task availability zone	false	string []
ecsTaskDefinitionArn__contains	Free-text filter by ECS task definition arn	false	string []
ecsTaskDefinitionFamily__contains	Free-text filter by ECS task definition family	false	string []
ecsTaskDefinitionRevision__contains	Free-text filter by ECS task definition revision	false	string []
ecsType__contains	Free-text filter by ECS type	false	string []
ecsVersion__contains	Free-text filter by ECS version	false	string []
encryptedApplications	Disk encryption status	false	boolean []
entraId__contains	Free-text filter by Entra ID (supports multiple values)	false	string []
externalId__contains	Free-text filter by external ID (Customer ID)	false	string []
externalIp__contains	Free-text filter by visible IP (supports multiple values)	false	string []
filteredGroupIds	List of Group IDs to filter by	false	string []
filteredSiteIds	List of Site IDs to filter by	false	string []
filterId	Include all Agents matching this saved	false	string

	filter		
firewallEnabled	The agents supports Firewall Control and it is enabled for the agent's group	false	boolean []
gatewayIp	Gateway ip	false	string
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of Group IDs to filter by	false	string []
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean []
hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
ids	Included Agent IDs	false	string []
idsNin	Excluded Agent IDs	false	string []
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []
isActive	Include only active Agents	false	boolean []
isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []
isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA enabled if True, or not if False	false	boolean []
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []

isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastActiveDate__gt	Agents last active after this time	false	string
lastActiveDate__gte	Agents last active after or at this time	false	string
lastActiveDate__lt	Agents last active before this time	false	string
lastActiveDate__lte	Agents last active before or at this time	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string
lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string
liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []

locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceLocalnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []
osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []

proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []
scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []

storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string
totalMemory__gt	Memory size (MB, more than)	false	integer
totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string

	inclusive)		
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Start collection of Forensics artifacts according to specified profile - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Return result of collection task

GET /web/api/v2.1/remote-ops/forensics/task-result

Return result of collection task

Parameters

taskid	required	Task id. Example: "225494730938493804".
--------	----------	---

Response Messages

200 - Task is found and result is returned

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Return result of collection task - response - data table
errors	Errors	false	array

Return result of collection task - response - data

Name	Description	Required	Value
collection	Details of the collection	false	see Return result of collection task - response - collection table
collectionFile	Details of the collection file, if exists	false	see Return result of collection task - response - collectionFile table
collectionFileError	Collection file error	false	string
collectionProfile	Details of the collection profile used for collection	false	see Return result of collection task - response - collectionProfile table
destination	Details of the destination	false	see Return result of collection task - response - destination table
skylightParentTaskResultsUrl	Link to Skylight view with results for parent task	false	string
skylightResultsStatus	Status of Skylight results	false	see Return result of collection task - response - skylightResultsStatus table
skylightResultsUrl	Link to Skylight view with results for the single task	false	string

Return result of collection task - response - collection

Name	Description	Required	Value
tag	Tag of the collection	true	string
artifacts	Artifacts included in the collection	false	see Return result of collection task - response - artifacts table
description	Description of the collection	false	string

Return result of collection task - response - artifacts

Name	Description	Required	Value
artifactType	Type of the artifact	true	string
detailedStatus	Detailed status of the artifact collection	true	string
osType	Target Os	true	string
status	Status of the artifact collection	true	string
parameters	Parameters passed to the artifact	false	object

	collector		
--	-----------	--	--

Return result of collection task - response - collectionFile

Name	Description	Required	Value
agentId	Agent id	true	string
signature	File Signature	true	string
siteId	Site id	true	string
uploadedTimestamp	Uploaded timestamp	true	string
signatureType	Signature type	false	string

Return result of collection task - response - collectionProfile

Name	Description	Required	Value
id	ID of used collection profile	true	string
name	Name of used collection profile	true	string

Return result of collection task - response - destination

Name	Description	Required	Value
profileId	ID of destination profile used for collection	false	string

Return result of collection task - response - skylightResultsStatus

Name	Description	Required	Value
hasFailures	Indicates if there were failures during uploading data to Skylight	true	boolean
isEmpty	Indicates if the collection contains no data store in Skylight	true	boolean
errorMessage	Last error message if there were	false	string

	failures during upload		
--	------------------------	--	--

Returns collection file download pre-signed url

GET /web/api/v2.1/remote-ops/forensics/collection-file-url

Returns collection file download pre-signed url

Parameters

agentid	required	Agent id. Example: "225494730938493804".
signature	required	Signature
signaturetype	required	Signature type
siteid	required	Site id. Example: "225494730938493804".
uploadedtimestamp	required	Uploaded timestamp

Response Messages

- 200 - Remote Ops Forensics Collection File Found
- 400 - Invalid user input received. See error details for further information.
- 401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Returns collection file download pre-signed url - response - data table
errors	Errors	false	array

Returns collection file download pre-signed url - response - data

Name	Description	Required	Value
downloadUrl	download link for the file	false	string
fileName	the name of the file	false	string

Check if collection file exists for given storyline

GET /web/api/v2.1/remote-ops/forensics/is-collection-file

Check if collection file exists for given storyline

Parameters

agentid	required	Agent's ID. Example: "225494730938493804".
storyline	required	Storyline ID

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

404 - Collection file not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Check if collection file exists for given storyline - response - data table
errors	Errors	false	array

Check if collection file exists for given storyline - response - data

Name	Description	Required	Value
agentId	Agent's ID	true	string
signature	File's Signature	true	string
siteId	Site's ID	true	string
signatureType	Signature type	false	string
uploadedTimestamp	Collection file uploaded DateTime iso-formatted	false	string

Get list of supported artifact types

GET /web/api/v2.1/remote-ops/forensics/artifact-types

Return a complete list of supported artifact types

Response Messages

200 - Successes

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get list of supported artifact types - response - data table
errors	Errors	false	array

Get list of supported artifact types - response - data

Name	Description	Required	Value
artifactType	Artifact type code name, used as identifier of the artifact	true	string
category	Category of the artifact type	true	string
name	User-readable name of the artifact	true	string
categoryKey	Category key for translation	false	string
osTypes	Os types	false	string []
parameters	Parameters	false	see Get list of supported artifact types - response - parameters table
version	Internal version of the artifact type	false	integer

Get list of supported artifact types - response - parameters

Name	Description	Required	Value
default	Default value of artifact parameter, null if the parameter does not allow default	true	string
key	Unique key of artifact parameter	true	string
type	Type of artifact parameter	true	enum
description	Artifact parameter description	false	string
example	Example of the parameter value	false	string

Get Collection profile by ID

GET /web/api/v2.1/remote-ops/forensics/collection-profiles/{profile_id}

Get contents of an existing Forensics Collection profile, including specification of artifacts to be collected and profile metadata.

Response Messages

200 - Collection profile content is returned

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permission to perform such action

404 - Collection profile was not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get Collection profile by ID - response - data table
errors	Errors	false	array

Get Collection profile by ID - response - data

Name	Description	Required	Value
createdAt	Timestamp when the profile was created	true	string
creator	Email of user who created the profile	true	string
description	Collection profile description	true	string
id	Collection profile ID	true	string
isBundled	Flag indicating if the Collection profile is bundled (provided by S1)	true	boolean
name	name of collection profile in db	true	string
scopeId	Scope ID where the Collection profile is stored	true	string
scopeLevel	Scope level where the Collection profile is stored	true	enum
scopeName	Scope name where the Collection profile is stored	true	string
scopePath	Full path of Scope where the Collection profile is stored	true	string
type	Type of RemoteOps Action (forensicsProfile)	true	enum
updater	Email of user who update the profile	true	string
version	Collection profile version	true	string
artifacts	Artifacts	false	see Get Collection profile by ID - response - artifacts table
nameKey	Profile name in camel case representation used for localization, only relevant for default profiles	false	string
osTypes	Os types	false	string []
updatedAt	Timestamp when the profile was updated	false	string

Get Collection profile by ID - response - artifacts

Name	Description	Required	Value
artifactType	Type of artifact to collect	true	string
osType	OS type where the artifact will be collected	true	enum
parameters	Input parameters for the artifact	false	object

Update Collection profile by ID

PUT /web/api/v2.1/remote-ops/forensics/collection-profiles/{profile_id}

Update contents of an existing Forensics Collection profile. All the profile data should be specified, even if the values are not changed. It's not allowed to change scope of profile. The name must be unique inside the scope, if different profile with specified name already exists, Bad request error is returned and no profile data is changed.

Response Messages

200 - Collection profile is updated

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User has insufficient permission to perform such action

404 - Collection profile was not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Update Collection profile by ID - response - data table
errors	Errors	false	array

Update Collection profile by ID - response - data

Name	Description	Required	Value
createdAt	Timestamp when the profile was created	true	string
creator	Email of user who created the profile	true	string
description	Collection profile description	true	string
id	Collection profile ID	true	string

nameKey	Profile name in camel case representation used for localization, only relevant for default profiles	false	string
osTypes	Os types	false	string []
updatedAt	Timestamp when the profile was updated	false	string

Update Collection profile by ID - response - artifacts

Name	Description	Required	Value
artifactType	Type of artifact to collect	true	string
osType	OS type where the artifact will be collected	true	enum
parameters	Input parameters for the artifact	false	object

Body Schema

Name	Description	Required	Value
data	Data	true	see Update Collection profile by ID - body - data table

Update Collection profile by ID - body - data

Name	Description	Required	Value
name	Collection profile name	true	string
artifacts	Artifacts	false	see Update Collection profile by ID - body - artifacts table
description	Collection profile description	false	string

Update Collection profile by ID - body - artifacts

Name	Description	Required	Value
artifactType	Type of artifact to collect	true	string
osType	OS type where the artifact will be collected	true	enum
parameters	Input parameters for the artifact	false	object

Delete Collection profiles

DELETE /web/api/v2.1/remote-ops/forensics/collection-profiles

Delete multiple Forensics Collection profiles. The profiles that are not possible to delete (e.g. bundled profiles by S1, non-existing or user does not have proper permissions) are skipped. Contents of successfully deleted profiles are returned in response.

Response Messages

200 - Delete was completed or partially completed.

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Delete Collection profiles - response - data table

errors	Errors	false	array
--------	--------	-------	-------

sitelds	List of Site IDs to filter by	false	string []

Create new Collection profile

POST /web/api/v2.1/remote-ops/forensics/collection-profiles

Create a Forensics Collection profile with provided artifacts on the specified scope. The profile name must be unique inside the scope, if the name already exists, Bad request error is returned.

Response Messages

200 - Collection profile is created

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Create new Collection profile - response - data table

osType	OS type where the artifact will be collected	true	enum
parameters	Input parameters for the artifact	false	object

Get list of available Collection profiles

GET /web/api/v2.1/remote-ops/forensics/collection-profiles

Get list of available Forensics collection profiles. The list may be narrowed by specifying filter parameter. Profiles are inherited between scopes in both upward and downward directions, e.g. profiles on parent Account and Tenant scopes are returned when querying for a Site scope, and profiles on a Site scopes are returned when querying its parent Account. Bundled profiles are available regardless of requested scope. If scope is not specified in filter, the scopes of the requesting user are considered.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
autotriggeringcompatible	optional	Fetch auto triggering compatible profiles
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.

cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
ids	optional	A list of collection profiles IDs. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".
ostypes	optional	Os types. Example: "linux".
query	optional	Keyword to search in Collection profile name / description
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get list of available Collection profiles - response - pagination table
data	Response data	false	see Get list of available Collection profiles - response - data table
errors	Errors	false	array

Get list of available Collection profiles - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get list of available Collection profiles - response - data

Name	Description	Required	Value
createdAt	Timestamp when the profile was created	true	string
creator	Email of user who created the profile	true	string
creatorId	ID of user who created the profile	true	string
description	Collection profile description	true	string
id	Collection profile ID	true	string
isBundled	Flag indicating if the Collection profile is bundled (provided by S1)	true	boolean
name	name of collection profile in db	true	string
scopeId	Scope ID where the Collection profile is stored	true	string
scopeLevel	Scope level where the Collection profile is stored	true	enum
scopeName	Scope name where the Collection profile is stored	true	string
scopePath	Full path of Scope where the Collection profile is stored	true	string
type	Type of RemoteOps Action (forensicsProfile)	true	enum
updater	Email of user who update the profile	true	string

updaterId	ID of user who updated the profile	true	string
version	Collection profile version	true	string
nameKey	Profile name in camel case representation used for localization, only relevant for default profiles	false	string
osTypes	Os types	false	string []
updatedAt	Timestamp when the profile was updated	false	string

RemoteOps Scripts

Run Remote Script

POST /web/api/v2.1/remote-scripts/execute

Run a remote script that was uploaded to the SentinelOne Script Library.

Response Messages

200 - Run remote script request was successful

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Run Remote Script - response - data table
errors	Errors	false	array

Run Remote Script - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer
parentTaskId	The parent task id of the script execution task, null in case of pending execution	false	string
pending	Flag indicating if requested script execution requires approval and is created as pending execution	false	boolean
pendingExecutionId	ID of created pending execution, present only if pending flag is true	false	string

Body Schema

Name	Description	Required	Value
filter	Applied filter	true	see Run Remote Script - body - filter table
data	Data	false	see Run Remote Script - body - data table

Run Remote Script - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
activeProtection	Included agent active protections	false	string []
activeThreats	Include Agents with this amount of active threats	false	integer
activeThreats__gt	Include Agents with at least this amount of active threats	false	integer
adComputerMember__contains	Free-text filter by Active Directory computer groups string (supports multiple values)	false	string []
adComputerName__contains	Free-text filter by Active Directory computer name string (supports multiple values)	false	string []
adComputerQuery__contains	Free-text filter by Active Directory computer name or its groups (supports multiple values)	false	string []
adQuery	An Active Directory query string	false	string
adQuery__contains	Free-text filter by Active Directory string (supports multiple values)	false	string []
adUserMember__contains	Free-text filter by Active Directory user groups string (supports multiple values)	false	string []
adUserName__contains	Free-text filter by Active Directory username string (supports multiple values)	false	string []
adUserQuery__contains	Free-text filter by Active Directory computer name or its groups (supports multiple values)	false	string []
agentNamespace__contains	Free-text filter by agent namespace (supports multiple values)	false	string []
agentOperatingMode__contains	Free-text filter by Agent Operating Mode (supports multiple values)	false	string []
agentOperatingModes	Agent operating mode in	false	string []
agentOperatingModesNin	Agent operating mode nin	false	string []

agentPodName__contains	Free-text filter by agent pod name (supports multiple values)	false	string []
agentVersion__between	Version range for agent version (format: <from_version>-<to_version>, inclusive)	false	string
agentVersion__gt	Agents versions greater than given version	false	string
agentVersion__gte	Agents versions greater than or equal to given version	false	string
agentVersion__lt	Agents versions less than given version	false	string
agentVersion__lte	Agents versions less than or equal to given version	false	string
agentVersions	Agent versions to include	false	string []
agentVersionsNin	Agent versions not to include	false	string []
appsVulnerabilityStatuses	Apps vulnerability status in	false	string []
appsVulnerabilityStatusesNin	Apps vulnerability status nin	false	string []
awsRole__contains	Free-text filter by aws role(supports multiple values)	false	string []
awsSecurityGroups__contains	Free-text filter by aws securityGroups(supports multiple values)	false	string []
awsSubnetIds__contains	Free-text filter by aws subnet ids (supports multiple values)	false	string []
azureResourceGroup__contains	Free-text filter by azure resource group(supports multiple values)	false	string []
cloudAccount__contains	Free-text filter by cloud account (supports multiple values)	false	string []
cloudImage__contains	Free-text filter by cloud image (supports multiple values)	false	string []
cloudInstanceId__contains	Free-text filter by cloud instance id(supports multiple values)	false	string []
cloudInstanceSize__contains	Free-text filter by cloud instance size(supports multiple values)	false	string []
cloudLocation__contains	Free-text filter by cloud location (supports multiple values)	false	string []
cloudNetwork__contains	Free-text filter by cloud network (supports multiple values)	false	string []

cloudProvider	Agents from which cloud provider	false	string []
cloudProviderNin	Exclude Agents from these cloud provider	false	string []
cloudTags__contains	Free-text filter by cloud tags (supports multiple values)	false	string []
clusterName__contains	Free-text filter by cluster name (supports multiple values)	false	string []
computerName	Computer name	false	string
computerName__contains	Free-text filter by computer name (supports multiple values)	false	string []
computerName__like	Match computer name partially (substring)	false	string
computerNameOrUuid__contains	Free-text filter by computer name or uuid (supports multiple values)	false	string []
consoleMigrationStatuses	Migration status in	false	string []
consoleMigrationStatusesNin	Migration status nin	false	string []
containerizedWorkloadCounts	Containerized workload counts	false	see Run Remote Script - body - containerizedWorkloadCounts table
coreCount__between	Possible number of CPU cores (inclusive)	false	string
coreCount__gt	CPU cores (more than)	false	integer
coreCount__gte	CPU cores (more than or equal)	false	integer
coreCount__lt	CPU cores (less than)	false	integer
coreCount__lte	CPU cores (less than or equal)	false	integer
cpuCount__between	Possible number of CPU cores (inclusive)	false	string
cpuCount__gt	Number of CPUs (more than)	false	integer
cpuCount__gte	Number of CPUs (more than or equal)	false	integer
cpuCount__lt	Number of CPUs (less than)	false	integer
cpuCount__lte	Number of CPUs (less than or equal)	false	integer
cpuld__contains	Free-text filter by CPU name (supports multiple values)	false	string []
createdAt__between	Date range for creation time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
createdAt__gt	Agents created after this timestamp	false	string

createdAt__gte	Agents created after or at this timestamp	false	string
createdAt__lt	Agents created before this timestamp	false	string
createdAt__lte	Agents created before or at this timestamp	false	string
csvFilterId	The ID of the CSV file to filter by	false	string
decommissionedAt__between	Date range for decommission time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
decommissionedAt__gt	Agents decommissioned after this timestamp	false	string
decommissionedAt__gte	Agents decommissioned after or at this timestamp	false	string
decommissionedAt__lt	Agents decommissioned before this timestamp	false	string
decommissionedAt__lte	Agents decommissioned before this timestamp	false	string
domains	Included network domains	false	string []
domainsNin	Not included network domains	false	string []
ecsClusterName__contains	Free-text filter by ECS cluster name	false	string []
ecsServiceArn__contains	Free-text filter by ECS service arn	false	string []
ecsServiceName__contains	Free-text filter by ECS service name	false	string []
ecsTaskArn__contains	Free-text filter by ECS task arn	false	string []
ecsTaskAvailabilityZone__contains	Free-text filter by ECS task availability zone	false	string []
ecsTaskDefinitionArn__contains	Free-text filter by ECS task definition arn	false	string []
ecsTaskDefinitionFamily__contains	Free-text filter by ECS task definition family	false	string []
ecsTaskDefinitionRevision__contains	Free-text filter by ECS task definition revision	false	string []
ecsType__contains	Free-text filter by ECS type	false	string []
ecsVersion__contains	Free-text filter by ECS version	false	string []
encryptedApplications	Disk encryption status	false	boolean []
entraId__contains	Free-text filter by Entra ID (supports multiple values)	false	string []

externalId__contains	Free-text filter by external ID (Customer ID)	false	string []
externalIp__contains	Free-text filter by visible IP (supports multiple values)	false	string []
filteredGroupIds	List of Group IDs to filter by	false	string []
filteredSiteIds	List of Site IDs to filter by	false	string []
filterId	Include all Agents matching this saved filter	false	string
firewallEnabled	The agents supports Firewall Control and it is enabled for the agent's group	false	boolean []
gatewayIp	Gateway ip	false	string
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of Group IDs to filter by	false	string []
hasContainerizedWorkload	Indicates whether the agent protects containerized workload at the moment	false	boolean []
hasLocalConfiguration	Agent has a local configuration set	false	boolean
hasTags	Include only Agents that have any tags assigned if True, or none if False	false	boolean
ids	Included Agent IDs	false	string []
idsNin	Excluded Agent IDs	false	string []
infected	Include only Agents with at least one active threat	false	boolean
installerTypes	Include only Agents installed with these package types	false	string []
installerTypesNin	Exclude Agents installed with these package types	false	string []
isActive	Include only active Agents	false	boolean []
isAdConnector	The agents that are ADConnectors if True, or not if False	false	boolean []
isDecommissioned	Include active, decommissioned or both	false	boolean []
isEventSearchProxyEnabled	Include only Agents using event search proxy. Accepts true, false, or none (for not reported).	false	string []
isHyperAutomate	The agents has Hyper Automate PNA	false	boolean []

	enabled if True, or not if False		
isMgmtProxyEnabled	Include only Agents using mgmt proxy. Accepts true, false, or none (for not reported).	false	string []
isPendingUninstall	Include only Agents with pending uninstall requests	false	boolean []
isUninstalled	Include installed, uninstalled or both	false	boolean []
isUpToDate	Include only Agents with updated software	false	boolean []
k8sNodeLabels__contains	Free-text filter by K8s node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by K8s node name (supports multiple values)	false	string []
k8sType__contains	Free-text filter by K8s type(supports multiple values)	false	string []
k8sVersion__contains	Free-text filter by K8s version (supports multiple values)	false	string []
lastActiveDate__between	Date range for last active date(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastActiveDate__gt	Agents last active after this time	false	string
lastActiveDate__gte	Agents last active after or at this time	false	string
lastActiveDate__lt	Agents last active before this time	false	string
lastActiveDate__lte	Agents last active before or at this time	false	string
lastLoggedInUserName__contains	Free-text filter by username (supports multiple values)	false	string []
lastSuccessfulScanDate__between	Date range for last successful full disk scan(format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
lastSuccessfulScanDate__gt	Agents last successful full disk scan after this time	false	string
lastSuccessfulScanDate__gte	Agents last successful full disk scan after or at this time	false	string
lastSuccessfulScanDate__lt	Agents last successful full disk scan before this time	false	string
lastSuccessfulScanDate__lte	Agents last successful full disk scan before or at this time	false	string

liveUpdateId__contains	Free-text filter by live update ID (supports multiple values)	false	string []
locationEnabled	The agents supports Location Awareness and it is enabled for the agent's group	false	boolean []
locationIds	Include only Agents reporting these locations	false	string []
locationIdsNin	Do not include only Agents reporting these locations	false	string []
machineTypes	Included machine types	false	string []
machineTypesNin	Not included machine types	false	string []
migrationStatus	Migration status	false	enum
missingPermissions	Included missing permissions	false	string []
missingPermissionsNin	Excluded missing permissions	false	string []
mitigationMode	Agent mitigation mode policy	false	enum
mitigationModeSuspicious	Mitigation mode policy for suspicious activity	false	enum
networkInterfaceGatewayMacAddress__contains	Free-text filter by Gateway MAC address (supports multiple values)	false	string []
networkInterfaceIpnet__contains	Free-text filter by local IP (supports multiple values)	false	string []
networkInterfacePhysical__contains	Free-text filter by MAC address (supports multiple values)	false	string []
networkQuarantineEnabled	The agents supports Network Quarantine Control and its enabled for the agent's group	false	boolean []
networkStatuses	Included network statuses	false	string []
networkStatusesNin	Included network statuses	false	string []
operationalStates	Agent operational state	false	string []
operationalStatesNin	Do not include these Agent operational states	false	string []
osArch	OS architecture	false	enum
osArches	OS architectures to include	false	string []
osArchesNin	OS architectures not to include	false	string []
osTypes	Included OS types	false	string []
osTypesNin	Not included OS types	false	string []

osVersion__contains	Free-text filter by OS full name and version (supports multiple values)	false	string []
pacFileUsage	Include only Agents using PAC file for proxy configuration. Accepts true, false, or none (for not reported).	false	string []
proxyMethod	Include only Agents using these proxy methods	false	string []
proxyMethodNin	Exclude Agents using these proxy methods	false	string []
query	A free-text search term, will match applicable attributes (sub-string match). Note: Device's physical addresses will be matched if they start with the search term only (no match if they contain the term).	false	string
rangerStatus	[DEPRECATED] Use rangerStatuses.	false	enum
rangerStatuses	Status of Network Discovery	false	string []
rangerStatusesNin	Do not include these Network Scanner Statuses	false	string []
rangerVersions	Network Scanner versions to include	false	string []
rangerVersionsNin	Network Scanner versions not to include	false	string []
registeredAt__between	Date range for first registration time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
registeredAt__gt	Agents registered after this time	false	string
registeredAt__gte	Agents registered after or at this time	false	string
registeredAt__lt	Agents registered before this time	false	string
registeredAt__lte	Agents registered before or at this time	false	string
remoteOpsForensicsSupported	Include only agents that has Remote Ops Forensicsfeature supported	false	boolean
remoteProfilingStates	Agent remote profiling state	false	string []
remoteProfilingStatesNin	Do not include these Agent remote profiling states	false	string []
rsoLevel	Supported Remote Script Orchestration level	false	enum
rsoLevels	A list of included rso_levels	false	string []

scanStatus	Scan status	false	enum
scanStatuses	Included scan statuses	false	string []
scanStatusesNin	Not included scan statuses	false	string []
serialNumber__contains	Free-text filter by Serial Number (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storageTypes	Included storage types	false	string []
storageTypesNin	Excluded storage types	false	string []
tagsData	Filter agents by their assigned tags. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
tenant	Indicates a tenant scope request	false	boolean
threatContentHash	Include only Agents that have at least one threat with this content hash	false	string
threatCreatedAt__between	Agents with threats reported in a date range (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
threatCreatedAt__gt	Agents with threats reported after this time	false	string
threatCreatedAt__gte	Agents with threats reported after or at this time	false	string
threatCreatedAt__lt	Agents with threats reported before this time	false	string
threatCreatedAt__lte	Agents with threats reported before or at this time	false	string
threatHidden	Include only Agents with at least one hidden threat	false	boolean
threatMitigationStatus	Include only Agents that have threats with this mitigation status	false	enum
threatRebootRequired	Has at least one threat with at least one mitigation action pending reboot to succeed	false	boolean []
threatResolved	Include only Agents with at least one resolved threat	false	boolean
totalMemory__between	Total memory range (GB, inclusive)	false	string

totalMemory__gt	Memory size (MB, more than)	false	integer
totalMemory__gte	Memory size (MB, more than or equal)	false	integer
totalMemory__lt	Memory size (MB, less than)	false	integer
totalMemory__lte	Memory size (MB, less than or equal)	false	integer
updatedAt__between	Date range for update time (format: <from_timestamp>-<to_timestamp>, inclusive)	false	string
updatedAt__gt	Agents updated after this timestamp	false	string
updatedAt__gte	Agents updated after or at this timestamp	false	string
updatedAt__lt	Agents updated before this timestamp	false	string
updatedAt__lte	Agents updated before or at this timestamp	false	string
userActionsNeeded	Included pending user actions	false	string []
userActionsNeededNin	Excluded pending user actions	false	string []
uuid	Agent's universally unique identifier	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []
uuids	A list of included UUIDs	false	string []
windowsOsRevision__gte	Agents os revision than or equal to given version	false	integer
windowsOsRevision__lte	Agents os revision lower than or equal to given version	false	integer

Run Remote Script - body - containerizedWorkloadCounts

Name	Description	Required	Value
containersCount	Number of containers the agent is currently protecting	false	integer
PodsCount	Number of K8s pods the agent is currently protecting	false	integer
tasksCount	Number of tasks the agent is currently protecting	false	integer

Run Remote Script - body - data

Name	Description	Required	Value
outputDestination	Output destination	true	enum
scriptId	Script id	true	string
taskDescription	Task description	true	string
apiKey	Api key	false	string
destinationProfileId	Id of destination profile to use	false	string
destinationProfileKeyword	Destination profile keyword	false	string
inputParams	Input params	false	string
outputDirectory	Output directory	false	string
outputFilePaths	Output file paths	false	string []
password	Password	false	string
passwordFromScope	Used to specify execution where a generic password is used	false	see Run Remote Script - body - passwordFromScope table
requiresApproval	If set to true, execution will require approval	false	boolean
scriptRuntimeTimeoutSeconds	Script runtime timeout in seconds for current execution	false	integer
singularityxdrKeyword	Singularityxdr keyword	false	string
singularityxdrUrl	Singularityxdr url	false	string

Run Remote Script - body - passwordFromScope

Name	Description	Required	Value
scopeLevel	User scope	true	enum
scopeId	string repr. of scope id	false	string

Get Remote Scripts Tasks Status

GET /web/api/v2.1/remote-scripts/status

Get remote scripts tasks using a variety of filters. Accessible via API only
parent_task_id or parent_task_id__in query parameter is mandatory

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
computername__contains	optional	Free-text filter by agent computer name (supports multiple values)
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__gt	optional	Created at greater than. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Created at greater or equal than. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Created at lesser than. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Created at lesser or equal than. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
description__contains	optional	Only include tasks with specific description
detailedstatus__contains	optional	Only include tasks with specific detailed status
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of IDs to filter by. Example: "225494730938493804,225494730938493915".
initiatedby__contains	optional	Only include tasks from specific initiating user
limit	optional	Limit number of returned items (1-1000). Example: "10".
parenttaskid	optional	parent task id to fetch the status by. Example: "225494730938493804".
parenttaskid__in	optional	List of IDs to filter by
query	optional	Query
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".

skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
status	optional	Status in. Example: "created".
tenant	optional	Indicates a tenant scope request
type	optional	Type
types	optional	Type in
updatedat__gt	optional	Updated at greater than. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Updated at greater or equal than. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Updated at lesser than. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Updated at lesser or equal than. Example: "2018-02-27T04:49:26.257525Z".
uuid__contains	optional	Free-text filter by agent UUID (supports multiple values)

errors	Errors	false	array

Get script content - response - data

Name	Description	Required	Value
scriptContent	Script content	true	string

Get Scripts

GET /web/api/v2.1/remote-scripts

Get data of the scripts in the SentinelOne Script Library.

The SentinelOne Script Library, used for the Remote Script Orchestration feature, gives you a wide range of scripts to collect various forensic artifacts, parse them, and show them in formats that are easy to analyze. Use the scripts to collect information such as hardware and software inventory and configuration, running applications and processes, files and directories, network connections, and more.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
groupids	optional	List of group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	A list of script IDs. Example: "225494730938493804,225494730938493915".
isavailableforars	optional	Is the script runnable in Advanced Response Scripts
limit	optional	Limit number of returned items (1-1000). Example: "10".
ostypes	optional	List of the script OS types. Example: "linux".
query	optional	Query
scripttype	optional	List of the script types. Example: "artifactCollection".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".

skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

sitelds	List of Site IDs to filter by	false	string []

Update a Script

PUT /web/api/v2.1/remote-scripts/{script_id}

Change the properties of a given script: runtime timeout, name, and whether input is required (if true, input example and instructions are required). This command requires the script ID, which you can get from the Get Scripts API.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

404 - Script not found

Get paginated pending executions

GET /web/api/v2.1/remote-scripts/pending-executions

Get paginated pending executions

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
groupids	optional	List of group IDs to filter by. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

List saved searches

GET /sdl/v2/api/saved-searches

Retrieves all saved searches visible to the current user. Saved searches allow you to persist and quickly access frequently used search queries in Event Search. Use the `type` parameter to filter by PRIVATE (user-specific) or SHARED (visible to all users in the scope) searches.

Parameters

type	optional	Filter by search type. PRIVATE searches are visible only to you, while SHARED searches are visible to all users in your current scope. Defaults to PRIVATE if not specified.
------	----------	--

Response Messages

200 - List of saved searches retrieved successfully.

401 - Unauthorized. Authentication is required.

403 - Forbidden. User does not have permission to manage searches.

Response Schema

Name	Description	Required	Value
index	Zero-based position of the saved search in the list. This determines the display order.	true	integer

name	Display name of the saved search. Must be unique within the same type and scope.	true	string
type	Visibility type. PRIVATE searches are visible only to you, while SHARED searches are visible to all users in the same scope. Use the S1-Scope header to manage searches in different scopes.	true	enum
url	Event Search URL path with query parameters, typically starting with / events. This URL is used to navigate to the saved search.	true	string

Create or update saved searches

PUT /sdl/v2/api/saved-searches

Create or update multiple saved searches in a single request. This endpoint allows you to save up to 100 searches at once. When a search with the same name already exists in the target scope, the `duplicateStrategy` parameter controls the behavior: `NEW_ONLY` (default) skips duplicates, `REPLACE` overwrites existing searches, or `APPEND_SUFFIX` creates new searches with numeric suffixes (e.g., 'My Search (2)'). You can change the active scope using the `S1-Scope` header to manage `SHARED` searches in different scopes.

Note: A `teamToken` query parameter will be automatically added to each search URL if it is not already present. This token ensures the searches are scoped correctly.

Response Messages

- 200 - All searches were processed successfully. This includes searches that were saved, as well as searches that were skipped due to the duplicate strategy.
- 207 - Partial success. Some searches were saved successfully, but others failed validation or encountered errors. Check the results array for details on each search.
- 400 - Invalid request. The request body is malformed or contains invalid parameters.
- 401 - Authentication required. Please provide valid credentials.
- 403 - Permission denied. You do not have the required permissions to manage saved searches.
- 500 - Internal server error. All searches failed to save due to a system error.

Response Schema

Name	Description	Required	Value
results	Individual result for each search in the request, in the same order as submitted.	false	undefined []

Body Schema

Name	Description	Required	Value
duplicateStrategy	How to handle searches with names that already exist in the target scope. NEW_ONLY (default) skips duplicates and marks them as SKIPPED in the response. REPLACE overwrites existing searches with the same name. APPEND_SUFFIX creates new searches by adding numeric suffixes like ' (2)', ' (3)' to duplicate names.	false	enum
searches	List of saved searches to create or update. Maximum 100 searches per request.	false	undefined []

Delete saved searches

POST /sdl/v2/api/saved-searches/batch-delete

Delete multiple saved searches in a single request. You can delete up to 100 searches at once by providing their names and types. Each search name must be unique within its type (PRIVATE or SHARED) and scope. Use the `S1-Scope` header to target SHARED searches in specific scopes.

Response Messages

- 200 - All searches were deleted successfully.
- 207 - Partial success. Some searches were deleted successfully, but others were not found or encountered errors. Check the results array for details on each search.
- 400 - Invalid request. The request body is malformed or contains invalid parameters.
- 401 - Authentication required. Please provide valid credentials.
- 403 - Permission denied. You do not have the required permissions to delete saved searches.
- 500 - Internal server error. All searches failed to delete due to a system error.

Response Schema

Name	Description	Required	Value
results	Individual result for each search in the request, in the same order as submitted.	false	undefined []

Body Schema

Name	Description	Required	Value
searches	List of saved searches to delete, identified by name and type. Maximum 100 searches per request.	false	undefined []

Sentinel Deploy

Create Cred Group

POST /web/api/v2.1/ranger/cred-groups

Create a new Cred Group.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Create Cred Group - response - data table
errors	Errors	false	array

Create Cred Group - response - data

Name	Description	Required	Value
groupName	The cred group name	true	string
groupPassphrase	Encrypted passphrase with key unknown by the management	true	string
scopeId	Scope id	true	string
domain	The domain associated to this cred group	false	string
id	The cred group id	false	string
targetOs	The os type for this cred group	false	enum
totalDetails	The number of cred details in the group	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Create Cred Group - body - data table

Create Cred Group - body - data

Name	Description	Required	Value
groupName	The cred group name	true	string
groupPassphrase	Encrypted passphrase with key unknown by the management	true	string
scopeld	Scope id	true	string
domain	The domain associated to this cred group	false	string
targetOs	The os type for this cred group	false	enum

Get Cred groups

GET /web/api/v2.1/ranger/cred-groups

Get the data for each row in the Cred Groups table.

Parameters

accountids	optional	Single Account ID to filter by. Example: "225494730938493804".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
groupname	optional	Group name being searched
groupnamelike	optional	Group name being searched
ids	optional	A list of ids to get
limit	optional	Limit number of returned items (1-1000). Example: "10".
siteids	optional	Single Site ID to filter by. Example: "225494730938493804".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.

sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
targetos	optional	The os type for this cred group. Example: "windows".
totaldetails__gt	optional	Get creds with total details greater than the supplied number

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Cred groups - response - pagination table
data	Response data	false	see Get Cred groups - response - data table
errors	Errors	false	array

Get Cred groups - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Cred groups - response - data

Name	Description	Required	Value
groupName	The cred group name	true	string
groupPassphrase	Encrypted passphrase with key unknown by the management	true	string
scopeId	Scope id	true	string
domain	The domain associated to this cred group	false	string
id	The cred group id	false	string
targetOs	The os type for this cred group	false	enum
totalDetails	The number of cred details in the group	false	integer

Delete Cred Group

DELETE /web/api/v2.1/ranger/cred-groups/{cred_group_id}

Delete cred group value.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

404 - Cred group not found.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Delete Cred Group - response - data table
errors	Errors	false	array

Delete Cred Group - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Add cred details

POST /web/api/v2.1/ranger/cred-groups/details

Add cred details to a cred group.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

404 - Cred group not found.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Add cred details - response - data table
errors	Errors	false	array

Add cred details - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Body Schema

Name	Description	Required	Value
data	Data	false	see Add cred details - body - data table

Add cred details - body - data

Name	Description	Required	Value
credGroupid	Cred group id	true	string
details	The cred group details	false	see Add cred details - body - details table

Add cred details - body - details

Name	Description	Required	Value
credType	The type of the cred	true	string
encryptedCred	The encrypted creds	true	string
encryptedKey	A encrypted key for the creds	true	string
title	The title for the cred	true	string

Get Cred group details

GET /web/api/v2.1/ranger/cred-groups/details

Get the data for each row in the Cred Groups details table.

Parameters

accountids	optional	Single Account ID to filter by. Example: "225494730938493804".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
credgroupids	optional	A list of ids to get
credtypelike	optional	The type of the cred group
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
ids	optional	A list of ids to get
limit	optional	Limit number of returned items (1-1000). Example: "10".

siteids	optional	Single Site ID to filter by. Example: "225494730938493804".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
title	optional	Exact filter by title
titlelike	optional	Like filter by title

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Cred group details - response - pagination table
data	Response data	false	see Get Cred group details - response - data table
errors	Errors	false	array

Get Cred group details - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Cred group details - response - data

Name	Description	Required	Value
credType	The type of the cred group	true	string
title	The title for the cred	true	string
createdAt	The creation time	false	string
createdBy	The user that created the details	false	string
credGroupId	The cred group id	false	string
id	The detail id	false	string
updatedAt	The last update time	false	string
updatedBy	The user that updated the details	false	string

Delete Cred Group Detail

DELETE /web/api/v2.1/ranger/cred-groups/details/{detail_id}

Delete cred group detail value.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

404 - Cred group not found.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Delete Cred Group Detail - response - data table
errors	Errors	false	array

Delete Cred Group Detail - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Update Cred Group Details

PUT /web/api/v2.1/ranger/cred-groups/details/{detail_id}

Update cred group values.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

404 - Cred group not found.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Update Cred Group Details - response - data table
errors	Errors	false	array

Update Cred Group Details - response - data

Name	Description	Required	Value
credType	The type of the cred group	true	string
title	The title for the cred	true	string
createdAt	The creation time	false	string
createdBy	The user that created the details	false	string
credGroupId	The cred group id	false	string
id	The detail id	false	string
updatedAt	The last update time	false	string
updatedBy	The user that updated the details	false	string

Body Schema

data	Data	true	see Update Cred Group Details - body - data table

Update Cred Group Details - body - data

Name	Description	Required	Value
credType	The type of the cred	true	string
encryptedCred	The encrypted creds	true	string
encryptedKey	A encrypted key for the creds	true	string
title	The title for the cred	true	string

Service Users

Get Service Users

GET /web/api/v2.1/service-users

Get a list of service users.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
ids	optional	List of service user IDs to filter by. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".
query	optional	Full text search for fields: full_name, email, description
roleids	optional	List of rbac roles to filter by. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example:

		"225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

Response Messages

200 - List of service users retrieved successfully.

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value

Delete Service User - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Export Service Users

GET /web/api/v2.1/export/service-users

Export Service User data to a CSV, for Service Users that match the filter.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of service user IDs to filter by. Example: "225494730938493804,225494730938493915".
query	optional	Full text search for fields: full_name, email, description
roleids	optional	List of rbac roles to filter by. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Generate API Token for Service User

POST /web/api/v2.1/service-users/{service_user_id}/generate-api-token

Generate a new API token for a service user and revoke the existing API token.

Response Messages

200 - API token delivered to user.

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Forbidden.

404 - Service User not found.

409 - API token creation conflict.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Generate API Token for Service User - response - data table
errors	Errors	false	array

Generate API Token for Service User - response - data

Name	Description	Required	Value
token	Service User's API token	true	string

Bulk Delete Service Users - body - data

Settings

Get SSO Settings

GET /web/api/v2.1/settings/sso

Get the Single Sign-On configuration for the given Sites (to get the IDs, run "sites") or Accounts ("accounts").

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get SSO Settings - response - data table
errors	Errors	false	array

Get SSO Settings - response - data

Name	Description	Required	Value
autoProvisioning	True if the user should be auto provisioned	false	boolean
defaultUserRole	The role name of the default role for a new user logging in via SSO for the first time	false	string
defaultUserRoleId	The role name of the default role for a new user logging in via SSO for the first time	false	string
domains	A list of domain names associated with the scope	false	string []
enabled	Indicates if SSO is enabled	false	boolean
idpCertName	Identity provider's certificate file name (If not provided, cert name and content will stay untouched in the DB)	false	string
idpEntityId	Identity provider's Entity ID (a.k.a. Issuer)	false	string
idpSsoUrl	The SSO URL of the Identity Provider (Login URL)	false	string
signRequest	Indicates if SAML Request Signing is enabled	false	boolean
spAcsUrl	Management console Assertion Consumer Service (ACS) URL. This is where IDP should send the authentication request	false	string
spEntityId	Identifier the Management console creates to dialogue with the SSO provider.	false	string
ssoElevatedSessionReauthType	Type of re-authentication used for session elevation.	false	enum
ssoElevatedSessionReauthTypeEnabled	Marks whether re-auth type choice should be available in SSO settings	false	boolean
ssoInheritableDomains	A dictionary of inheritable domains	false	object
ssoInheritDomainsFrom	Scope(s) to inherit domains from	false	string []

ssoPropagateDomainsToChildren	True if the domains should be propagated to children scopes	false	boolean
-------------------------------	---	-------	---------

Set SSO Settings

PUT /web/api/v2.1/settings/sso

Change the Single Sign-On configuration for the given Sites (to get the IDs, run "sites") or Accounts ("accounts").

The Management supports SAML 2.0 and will integrate with SAML 2.0 compliant SSO providers.

SentinelOne Technical Support can help you with issues related to the provider we tested: Okta. To use a different ID provider, see the provider documentation and support.

For requirements and best practices of Okta integration, see <https://support.sentinelone.com/hc/en-us/articles/360004195714>.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Set SSO Settings - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
siteIds	List of Site IDs to filter by	false	string []

Get SSO Service Provider Certificate

GET /web/api/v2.1/settings/sso/sp-cert

Get the Service Provider Certificate for the Single Sign-On configuration for the given scope.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get SSO Service Provider Certificate - response - data table
errors	Errors	false	array

Get SSO Service Provider Certificate - response - data

Name	Description	Required	Value
expiresAt	Certificate expires at	false	string
fileName	File name of the signing certificate used by the service provider to sign SAML requests	false	string
issuedAt	Certificate issued at	false	string
pem	Certificate in PEM format	false	string

Download SSO Service Provider Certificate

GET /web/api/v2.1/settings/sso/sp-cert/download

Download the Service Provider Certificate for the Single Sign-On configuration for the given scope.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Test SSO Settings

POST /web/api/v2.1/settings/sso/test

Test Single Sign-On settings.

Response Messages

200 - The url to redirect too.

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Test SSO Settings - response - data table
errors	Errors	false	array

Test SSO Settings - response - data

Name	Description	Required	Value
redirectUrl	The url to redirect for test.	false	string

Body Schema

Name	Description	Required	Value
data	Data	true	see Test SSO Settings - body - data table
filter	Filter	true	see Test SSO Settings - body - filter table

Test SSO Settings - body - data

Name	Description	Required	Value
enabled	If True, other arguments must also be supplied, if False, other arguments stay untouched in the DB	true	boolean
autoProvisioning	True if the user should be auto provisioned	false	boolean
defaultUserRole	The name of the default role for a new user who logs in with SSO. Sending it without default_user_role_id will search only in global scope	false	string

Test SSO Settings - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
siteIds	List of Site IDs to filter by	false	string []

Get Notification Settings

GET /web/api/v2.1/settings/notifications

Get the notification settings for the given Sites (to get the IDs, run "settings") or Accounts ("accounts").

The response shows every possible notification and whether it is active and if so, for email or syslog or both. It also shows the ID string for each notification, which can be used in other commands.

Note: Each notification also shows "sms" which is deprecated.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".

Response Messages

200 - Data retrieved successfully

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User is not allowed in this scope

siteIds	List of Site IDs to filter by	false	string []

Sites

Get Sites

GET /web/api/v2.1/sites

Get the Sites that match the filters.

The response includes the IDs of Sites, which you can use in other commands.

Parameters

accountid	optional	Account id. Example: "225494730938493804".
accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
accountname__contain	optional	Free-text filter by account name (supports multiple values)

s		
activelicenses	optional	Active licenses
adminonly	optional	[DEPRECATED] Show sites the user has Admin privileges to
availablemovesites	optional	Only return sites the user can move agents to
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat	optional	Timestamp of site creation. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
description	optional	The description for the Site
description__contains	optional	Free-text filter by site description (supports multiple values)
expiration	optional	Expiration. Example: "2018-02-27T04:49:26.257525Z".
externalid	optional	Id in a CRM external system
features	optional	If sent return only sites that support this features. Example: "firewall-control".
healthstatus	optional	Health status
isdefault	optional	Is default
limit	optional	Limit number of returned items (1-1000). Example: "10".
module	optional	Module. Example: "star,rso".
name	optional	Name. Example: "My Site".
name__contains	optional	Free-text filter by site name (supports multiple values)
query	optional	Full text search for fields: name, account_name, description. (Note: on single-account consoles account name will not be matched)
registrationtoken	optional	Registration token. Example: "eyJ1cmwiOiAiaHR0cHM6Ly9jb25zb2xlLnNlbnRpbmVsb25lLm5ldCIsICJzaXRlX2tleSI6IClwNzhkYjliMWUyOTA1Y2NhIn0=".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
sitetype	optional	Site type. Example: "Trial".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".

skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sku	optional	Sku. Example: "core".
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
state	optional	Site state. Example: "active".
states	optional	List of states to filter
statesnin	optional	List of states to not filter
suite	optional	[DEPRECATED] Use sku instead. Example: "Core".
totallicenses	optional	Total licenses
updatedat	optional	Timestamp of last update. Example: "2018-02-27T04:49:26.257525Z".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

externalId	Id of CRM external system	false	string
inheritAccountExpiration	True, if expiration should be inherited from account	false	boolean
inherits	True if the policy is inherited from Tenant, False if the site has its own edited policy	false	boolean
irFields	IR related fields	false	see Create Site - body - irFields table
licenses	The license configuration for the Site	false	see Create Site - body - licenses table
policy	Policy is mandatory if inherits is false, else it will be ignored.	false	see Create Site - body - policy table
promptFields	Prompt related fields	false	see Create Site - body - promptFields table
siteType	Site types	false	enum
sku	[DEPRECATED] Use licenses instead	false	enum
suite	[DEPRECATED] Use licenses instead	false	enum
totalLicenses	Total licenses	false	integer
unlimitedExpiration	Is expiration unlimited, if not expiration should be supplied	false	boolean
unlimitedLicenses	Is the site unlimited, if not then total_licenses must be supplied	false	boolean
usageType	Usage type	false	enum

Create Site - body - irFields

Name	Description	Required	Value
companyName	The customer's company name	true	string
contactEmail	Business email of the customer contact. Must not match the IR partner domain, the submitter's own domain, or a free/personal email provider (e.g. Gmail, Yahoo, Hotmail)	true	string
contactFirstName	First name of the customer contact	true	string
contactLastName	Last name of the customer contact	true	string
country	Country of the customer	true	string
industry	Industry vertical of the customer	true	enum
numberOfEmployeesEndpoints	Estimated number of employees or endpoints at the customer	true	integer
city	City of the customer	false	string
postal	Postal / ZIP code of the customer	false	string
region	State or region within the country	false	string

Create Site - body - licenses

Name	Description	Required	Value
bundles	The list of Bundles selected	false	see Create Site - body - bundles table
modules	The list of Add-ons selected	false	see Create Site - body - modules table

Create Site - body - bundles

Name	Description	Required	Value
name		true	string
majorVersion		false	integer
surfaces		false	see Create Site - body - surfaces table

Create Site - body - surfaces

Name	Description	Required	Value
name		true	string
count	The number of licenses per Surface. -1 indicates unlimited count.	false	integer

Create Site - body - modules

Name	Description	Required	Value
name		true	string

Create Site - body - policy

Name	Description	Required	Value
agentLoggingOn	True if logging is enabled in the agent	false	boolean
agentNotification	[DEPRECATED] Show end point notification on suspicious.Replaced by 'show_suspicious' in the agent UI section	false	boolean
agentUi	Agent ui	false	see Create Site - body - agentUi table
agentUiOn	[DEPRECATED] Show/hide Agent UI. Moved inside the agent UI section	false	boolean
allowRemoteShell	True if Remote Shell is enabled for the scope	false	boolean
allowUnprotectByApprovedProcess	Allow Unprotect By Approved Process on/off	false	boolean
antiTamperingOn	Anti tampering on/off	false	boolean
autoDecommissionDays	Automatic decommission period in days	false	integer
autoDecommissionOn	Auto decommission on	false	boolean
autoFileUpload	Automatic file upload configuration	false	see Create Site - body - autoFileUpload table
autoImmuneOn	Automatic immune on/off - this value must be true since all policies are immune by default	false	boolean
autoMitigationAction	Default action for auto mitigation	false	string

cloudValidationOn	Cloud validation on	false	
createdAt	Timestamp of policy creation	false	string
driftDetectionDelayTime	Drift detection delay time in seconds	false	integer
driverBlocking	Suspicious driver blocking engine on/off	false	boolean
dvAttributesPerEventType	The DV attributes	false	see Create Site - body - dvAttributesPerEventType table
engines	The engines statuses	false	see Create Site - body - engines table
forensicsAutoTriggering	Forensics auto triggering configuration	false	see Create Site - body - forensicsAutoTriggering table
identityConfigurationSettings	Identity configuration	false	see Create Site - body - identityConfigurationSettings table
identityEndpointReporting	Endpoint reporting level	false	enum
identityOn	Identity module on/off	false	boolean
identityReportInterval	Identity telemetry report interval in minutes	false	integer
identityThrottlingInterval	Identity duplicate command consolidation interval in minutes	false	integer
identityUpdateInterval	Identity update interval in minutes	false	integer
informationalAlertsOn	Informational alerts on/off	false	boolean
inheritedFrom	Indicates the parent scope from which this policy is inherited, or 'null' if it is not inherited (modified specifically for the current scope).	false	enum
ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Create Site - body - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean
isDefault	True if this is the tenant policy	false	boolean
isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean
mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean

networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Create Site - body - remoteOpsForensics table
remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Create Site - body - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean
researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first registration	false	boolean
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

Create Site - body - agentUi

Name	Description	Required	Value
agentUiOn	Agent ui on	false	boolean
contactCompany	Contact company	false	string
contactDirectMessage	Contact direct message	false	string
contactEmail	Contact email	false	string
contactFreeText	Contact free text	false	string
contactOther	Contact other	false	string
contactPhoneNumber	Contact phone number	false	string
contactSupportWebsite	Contact support website	false	string
devicePopUpNotifications	Device pop up notifications	false	boolean

maxEventAgeDays	Max event age days	false	integer
showAgentWarnings	Show agent warnings	false	boolean
showDeviceTab	Show device tab	false	boolean
showQuarantineTab	Show quarantine tab	false	boolean
showSupport	Show support	false	boolean
showSuspicious	Show suspicious	false	boolean
threatPopUpNotifications	Threat pop up notifications	false	boolean

Create Site - body - autoFileUpload

Name	Description	Required	Value
enabled	Automatic file upload on/off	false	boolean
includeBenignFiles	Upload benign files	false	boolean
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum file size (MB) to upload	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalDiskUsage	Maximum local disk usage (MB) for uploaded files	false	integer
maxLocalDiskUsageLimit	Limit for the maximum local disk usage (MB) for uploaded files	false	integer

Create Site - body - dvAttributesPerEventType

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	see Create Site - body - autoInstallBrowserExtensions table
behavioralIndicators	Behavioral indicators event	false	see Create Site - body - behavioralIndicators table
commandScripts	Command scripts event	false	see Create Site - body - commandScripts table
crossProcess	Cross process event	false	see Create Site - body - crossProcess table
dataMasking	Data masking	false	see Create Site - body - dataMasking table

dllModuleLoad	DLL module load event	false	see Create Site - body - dllModuleLoad table
dns	Network event - DNS	false	see Create Site - body - dns table
driver	Driver	false	see Create Site - body - driver table
externalDeviceActivity	External Device Activity	false	see Create Site - body - externalDeviceActivity table
file	File event	false	see Create Site - body - file table
ip	Network event - IP	false	see Create Site - body - ip table
login	User login/logout event	false	see Create Site - body - login table
namedPipe	Named Pipe	false	see Create Site - body - namedPipe table
namedPipeExtended	Named Pipe Extended	false	see Create Site - body - namedPipeExtended table
openDirectoryActivity	Open Directory Activity	false	see Create Site - body - openDirectoryActivity table
process	Process event	false	see Create Site - body - process table
profileActivity	Profile Activity	false	see Create Site - body - profileActivity table
registry	Registry event	false	see Create Site - body - registry table
scheduledTask	Scheduled task event	false	see Create Site - body - scheduledTask table
smartFileMonitoring	Smart file monitoring	false	see Create Site - body - smartFileMonitoring table
url	URL Actions event	false	see Create Site - body - url table
userSubstitution	User Substitution	false	see Create Site - body - userSubstitution table
windowsEventLogs	Windows Event Log	false	see Create Site - body - windowsEventLogs table
windowsEventLogsExtended	Windows Event Log Extended	false	see Create Site - body - windowsEventLogsExtended table

Create Site - body - autoInstallBrowserExtensions

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	boolean

Create Site - body - behavioralIndicators

Name	Description	Required	Value
dvEventTypeBehavioralIndicators	Behavioral indicators event	false	boolean

Create Site - body - commandScripts

Name	Description	Required	Value
dvEventTypeCommandScripts	Command scripts event	false	boolean

Create Site - body - crossProcess

Name	Description	Required	Value
dvEventTypeCrossProcessDuplicateProcess	Duplicate Process Event Type	false	boolean
dvEventTypeCrossProcessDuplicateThread	Duplicate Thread Event Type	false	boolean
dvEventTypeCrossProcessOpenProcesses	Open Process Event Type	false	boolean
dvEventTypeCrossProcessRemoteThread	Remote Thread Event Type	false	boolean

Create Site - body - dataMasking

Name	Description	Required	Value
dataMasking	Data masking	false	boolean

Create Site - body - dllModuleLoad

Name	Description	Required	Value
dvEventTypeDllModuleLoad	DLL module load event	false	boolean

Create Site - body - dns

Name	Description	Required	Value
dvEventTypeDns	Network event - DNS	false	boolean
dvEventTypeExtendedDns	Extended DNS event	false	boolean

Create Site - body - driver

Name	Description	Required	Value
dvEventTypeDriverLoad	Driver Load	false	boolean

Create Site - body - externalDeviceActivity

Name	Description	Required	Value
dvEventTypeExternalDeviceConnect	External Device Connect Event Type	false	boolean
dvEventTypeExternalDeviceDisconnect	External Device Disconnect Event Type	false	boolean

Create Site - body - file

Name	Description	Required	Value
dvEventTypeFileCreation	File Creation Event Type	false	boolean
dvEventTypeFileDeletion	File Deletion Event Type	false	boolean
dvEventTypeFileModification	File Modification Event Type	false	boolean
dvEventTypeFileRename	File Rename Event Type	false	boolean
fullDiskScan	File Scan Event Type	false	boolean

Create Site - body - ip

Name	Description	Required	Value
dvEventTypeIpConnect	IP Connect Event Type	false	boolean
dvEventTypeIpListen	IP Listen Event Type	false	boolean

Create Site - body - login

Name	Description	Required	Value
------	-------------	----------	-------

dvEventTypeLoginLoggedIn	User Login Event Type	false	boolean
dvEventTypeLoginLoggedOut	User Logout Event Type	false	boolean

Create Site - body - namedPipe

Name	Description	Required	Value
dvEventTypeNamedPipeConnection	Named Pipe Connection Event Type	false	boolean
dvEventTypeNamedPipeCreation	Named Pipe Creation Event Type	false	boolean

Create Site - body - namedPipeExtended

Name	Description	Required	Value
namedPipeExtended	Named Pipe Connection Extended Event Type	false	boolean

Create Site - body - openDirectoryActivity

Name	Description	Required	Value
dvEventTypeOpenDirectoryAddAttributeValue	Add Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryAddMemberToGroup	Add Member to Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateGroup	Create Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateUser	Create User Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteGroup	Delete Group Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteUser	Delete User Event Type	false	boolean
dvEventTypeOpenDirectoryDisableUser	Disable User Event Type	false	boolean
dvEventTypeOpenDirectoryEnableUser	Enable User Event Type	false	boolean

r			
dvEventTypeOpenDirectoryModifyPassword	Modify Password Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveAttributeValue	Remove Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveMemberFromGroup	Remove Member from Group Event Type	false	boolean
dvEventTypeOpenDirectorySetAttributeValues	Set Attribute Values Event Type	false	boolean
dvEventTypeOpenDirectorySetMembersOfGroup	Set Members of Group Event Type	false	boolean

Create Site - body - process

Name	Description	Required	Value
dvEventTypeProcessCreation	Process Creation Event Type	false	boolean
dvEventTypeProcessExit	Process Exit Event Type	false	boolean
dvEventTypeProcessModification	Process Termination Event Type	false	boolean

Create Site - body - profileActivity

Name	Description	Required	Value
dvEventTypeProfileAddition	Profile Addition Event Type	false	boolean
dvEventTypeProfileRemoval	Profile Removal Event Type	false	boolean

Create Site - body - registry

Name	Description	Required	Value
dvEventTypeRegistryKeyCreated	Registry Key Created Event Type	false	boolean
dvEventTypeRegistryKeyDelete	Registry Key Delete Event Type	false	boolean
dvEventTypeRegistryKeyExport	Registry Key Export Event Type	false	boolean
dvEventTypeRegistryKeyImport	Registry Key Import Event Type	false	boolean

dvEventTypeRegistryKeyRename	Registry Key Rename Event Type	false	boolean
dvEventTypeRegistryKeySecurityChanged	Registry Key Security Changed Event Type	false	boolean
dvEventTypeRegistryValueCreated	Registry Value Crated Event Type	false	boolean
dvEventTypeRegistryValueDeleted	Registry Value Deleted Event Type	false	boolean
dvEventTypeRegistryValueModified	Registry Value Modified Event Type	false	boolean

Create Site - body - scheduledTask

Name	Description	Required	Value
dvEventTypeScheduledTaskDelete	Scheduled Task Delete Event Type	false	boolean
dvEventTypeScheduledTaskRegister	Scheduled Task Register Event Type	false	boolean
dvEventTypeScheduledTaskStart	Scheduled Task Start Event Type	false	boolean
dvEventTypeScheduledTaskTrigger	Scheduled Task Trigeer Event Type	false	boolean
dvEventTypeScheduledTaskUpdate	Scheduled Task Update Event Type	false	boolean

Create Site - body - smartFileMonitoring

Name	Description	Required	Value
smartFileMonitoring	Smart file monitoring	false	boolean

Create Site - body - url

Name	Description	Required	Value
dvEventTypeUrl	URL Actions event	false	boolean

Create Site - body - userSubstitution

Name	Description	Required	Value
dvEventTypeSu	su Event Type	false	boolean

dvEventTypeSudo	sudo Event Type	false	boolean
-----------------	-----------------	-------	---------

Create Site - body - windowsEventLogs

Name	Description	Required	Value
dvEventTypeWindowsEventLogCreation	Windows Event Log Creation Event Type	false	boolean

Create Site - body - windowsEventLogsExtended

Name	Description	Required	Value
windowsEventLogsExtended	Windows Event Log Extended Event Type	false	boolean

Create Site - body - engines

Name	Description	Required	Value
applicationControl	application control	false	enum
applicationDetection	application detection	false	enum
dataFiles	data files	false	enum
driftDetection	drift detection	false	enum
executables	executables	false	enum
exploits	exploits	false	enum
idr	idr	false	enum
lateralMovement	lateral movement	false	enum
networkProtection	network protection	false	enum
penetration	penetration	false	enum
preExecution	on-write	false	enum
preExecutionSuspicious	pre execution suspicious	false	enum
pup	potentially unwanted applications (PUP)	false	enum

remoteShell	remote shell	false	enum
reputation	reputation	false	enum

Create Site - body - forensicsAutoTriggering

Name	Description	Required	Value
linuxEnabled	True if linux forensics is enabled	false	boolean
linuxProfileId	The profile id for the linux forensics	false	string
linuxProfileName	The profile name for the linux forensics	false	string
macosEnabled	True if macos forensics is enabled	false	boolean
macosProfileId	The profile id for the macos forensics	false	string
macosProfileName	The profile name for the macos forensics	false	string
windowsEnabled	True if windows forensics is enabled	false	boolean
windowsProfileId	The profile id for the windows forensics	false	string
windowsProfileName	The profile name for the windows forensics	false	string

Create Site - body - identityConfigurationSettings

Name	Description	Required	Value
identityMaxCpuThreshold	Identity maximum CPU threshold	false	integer
identityMaxDefinedMemoryLimit	Identity maximum defined memory limit in MB	false	integer
identityMaxMemoryLimit	Identity maximum memory limit in MB	false	integer
identityMaxMemoryUsage	Identity maximum memory usage	false	integer
identityThresholdMonitoring	True if Identity threshold monitoring is enabled	false	boolean

Create Site - body - iocAttributes

Name	Description	Required	Value
autoInstallBrowserExtensions	Update auto install browser extensions	false	boolean
behavioralIndicators	Update behavioral indicators	false	boolean
commandScripts	Update command scripts	false	boolean
crossProcess	Update cross process	false	boolean
dataMasking	Update data masking	false	boolean
dllModuleLoad	Update DLL module load	false	boolean
dns	Network event - DNS	false	boolean
driver	Driver	false	boolean
externalDeviceActivity	External Device Activity	false	boolean
fds	Full disk scan	false	boolean
file	File event	false	boolean
ip	Network event - IP	false	boolean
login	User login/logout event	false	boolean
namedPipe	Named Pipe	false	boolean
namedPipeExtended	Named Pipe Extended	false	boolean
openDirectoryActivity	Open Directory Activity	false	boolean
process	Process creation event	false	boolean
profileActivity	Profile Activity	false	boolean
registry	Registry event	false	boolean
scheduledTask	Scheduled task event	false	boolean
smartFileMonitoring	Smart file monitoring	false	boolean
url	loc URI	false	boolean
userSubstitution	User Substitution	false	boolean
windowsEventLogs	Windows Event Log	false	boolean
windowsEventLogsExtended	Windows Event Log Extended	false	boolean

Create Site - body - remoteOpsForensics

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection	false	integer

	process		
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Create Site - body - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Create Site - body - promptFields

Name	Description	Required	Value
promptRegion	Region associated with the prompt	false	enum

promptTenantName	Tenant name associated with the prompt	false	string
promptUserEmail	Email of the user associated with the prompt	false	string
promptUserName	Name of the user associated with the prompt	false	string

Export Sites

GET /web/api/v2.1/export/sites

Export Sites data to a CSV, for Sites that match the filter.

Parameters

accountid	optional	Account id. Example: "225494730938493804".
accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
accountname__contains	optional	Free-text filter by account name (supports multiple values)
activelicenses	optional	Active licenses
adminonly	optional	[DEPRECATED] Show sites the user has Admin privileges to
availablemovesites	optional	Only return sites the user can move agents to
createdat	optional	Timestamp of site creation. Example: "2018-02-27T04:49:26.257525Z".
description	optional	The description for the Site
description__contains	optional	Free-text filter by site description (supports multiple values)
expiration	optional	Expiration. Example: "2018-02-27T04:49:26.257525Z".
externalid	optional	Id in a CRM external system
features	optional	If sent return only sites that support this features. Example: "firewall-control".
healthstatus	optional	Health status
isdefault	optional	Is default
module	optional	Module. Example: "star,rso".
name	optional	Name. Example: "My Site".

name__contains	optional	Free-text filter by site name (supports multiple values)
query	optional	Full text search for fields: name, account_name, description. (Note: on single-account consoles account name will not be matched)
registrationtoken	optional	Registration token. Example: "eyJ1cmwiOiAiaHR0cHM6Ly9jb25zb2xlnNlbnRpbmVsb25lLm5ldCIsICJzaXRlX2tleSI6IClwNzhkYjliMWUyOTA1Y2NhIn0=".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
sitetype	optional	Site type. Example: "Trial".
sku	optional	Sku. Example: "core".
state	optional	Site state. Example: "active".
states	optional	List of states to filter
statesnin	optional	List of states to not filter
suite	optional	[DEPRECATED] Use sku instead. Example: "Core".
totallicenses	optional	Total licenses
updatedat	optional	Timestamp of last update. Example: "2018-02-27T04:49:26.257525Z".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Get Site by ID

GET /web/api/v2.1/sites/{site_id}

Get the data of the Site of the ID. To get the ID, run "sites".

The response shows the Site expiration date, SKU, licenses (total and active), token, Account name and ID, who and when it was created and changed, and its status.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

404 - Site not found

Name	Description	Required	Value
count	The Surface count. -1 indicates unlimited count	false	integer
name	The Surface name.	false	string

Update Site - response - modules

Name	Description	Required	Value
displayName	The Add-on display name	false	string
majorVersion	The Add-on major version	false	integer
name	The Add-on internal api name	false	string

Update Site - response - settings

Name	Description	Required	Value
displayName	[DEPRECATED] The Setting display name	false	string
groupName	The Setting group name	false	
setting	The Setting display name	false	
settingGroup	[DEPRECATED] The Setting group name	false	string
settingGroupDisplayName	The Setting group display name	false	string

Update Site - response - promptFields

Name	Description	Required	Value
promptRegion	Region associated with the prompt	false	enum
promptTenantName	Tenant name associated with the prompt	false	string
promptUserEmail	Email of the user associated with the prompt	false	string
promptUserName	Name of the user associated with the prompt	false	string

Body Schema

Name	Description	Required	Value
data	Data	true	see Update Site - body - data table

Update Site - body - data

Name	Description	Required	Value
description	The user-defined description for the Site	false	string
expiration	Expiration	false	string
externalId	Id of CRM external system	false	string
id	Site ID	false	string
inheritAccountExpiration	True, if expiration should be inherited from account	false	boolean
inherits	True if the policy is inherited from Tenant, False if the site has its own edited policy	false	boolean
irFields	IR related fields	false	see Update Site - body - irFields table
licenses	The license configuration for the Site	false	see Update Site - body - licenses table
name	Name	false	string
policy	Policy	false	see Update Site - body - policy table
promptFields	Prompt related fields	false	see Update Site - body - promptFields table
siteType	Site type	false	enum
suite	[DEPRECATED] Use licenses instead	false	enum
totalLicenses	Total licenses	false	integer
unlimitedExpiration	Is expiration unlimited, if not expiration should be supplied	false	boolean
unlimitedLicenses	[DEPRECATED] True if the Site has unlimited licenses.	false	boolean
usageType	Usage type	false	enum

Update Site - body - irFields

Name	Description	Required	Value
companyName	The customer's company name	true	string
contactEmail	Business email of the customer	true	string

	contact. Must not match the IR partner domain, the submitter's own domain, or a free/personal email provider (e.g. Gmail, Yahoo, Hotmail)		
contactFirstName	First name of the customer contact	true	string
contactLastName	Last name of the customer contact	true	string
country	Country of the customer	true	string
industry	Industry vertical of the customer	true	enum
numberOfEmployeesEndpoints	Estimated number of employees or endpoints at the customer	true	integer
city	City of the customer	false	string
postal	Postal / ZIP code of the customer	false	string
region	State or region within the country	false	string

Update Site - body - licenses

Name	Description	Required	Value
bundles	The list of Bundles selected	false	see Update Site - body - bundles table
modules	The list of Add-ons selected	false	see Update Site - body - modules table

Update Site - body - bundles

Name	Description	Required	Value
name		true	string
majorVersion		false	integer
surfaces		false	see Update Site - body - surfaces table

Update Site - body - surfaces

Name	Description	Required	Value
name		true	string

count	The number of licenses per Surface. -1 indicates unlimited count.	false	integer
-------	--	-------	---------

Update Site - body - modules

Name	Description	Required	Value
name		true	string

Update Site - body - policy

Name	Description	Required	Value
agentLoggingOn	True if logging is enabled in the agent	false	boolean
agentNotification	[DEPRECATED] Show end point notification on suspicious.Replaced by 'show_suspicious' in the agent UI section	false	boolean
agentUi	Agent ui	false	see Update Site - body - agentUi table
agentUiOn	[DEPRECATED] Show/hide Agent UI. Moved inside the agent UI section	false	boolean
allowRemoteShell	True if Remote Shell is enabled for the scope	false	boolean
allowUnprotectByApprovedProcess	Allow Unprotect By Approved Process on/off	false	boolean
antiTamperingOn	Anti tampering on/off	false	boolean
autoDecommissionDays	Automatic decommission period in days	false	integer
autoDecommissionOn	Auto decommission on	false	boolean
autoFileUpload	Automatic file upload configuration	false	see Update Site - body - autoFileUpload table
autoImmuneOn	Automatic immune on/off - this value must be true since all policies are immune by default	false	boolean
autoMitigationAction	Default action for auto mitigation	false	string
cloudValidationOn	Cloud validation on	false	
createdAt	Timestamp of policy creation	false	string

driftDetectionDelayTime	Drift detection delay time in seconds	false	integer
driverBlocking	Suspicious driver blocking engine on/off	false	boolean
dvAttributesPerEventType	The DV attributes	false	see Update Site - body - dvAttributesPerEventType table
engines	The engines statuses	false	see Update Site - body - engines table
forensicsAutoTriggering	Forensics auto triggering configuration	false	see Update Site - body - forensicsAutoTriggering table
identityConfigurationSettings	Identity configuration	false	see Update Site - body - identityConfigurationSettings table
identityEndpointReporting	Endpoint reporting level	false	enum
identityOn	Identity module on/off	false	boolean
identityReportInterval	Identity telemetry report interval in minutes	false	integer
identityThrottlingInterval	Identity duplicate command consolidation interval in minutes	false	integer
identityUpdateInterval	Identity update interval in minutes	false	integer
informationalAlertsOn	Informational alerts on/off	false	boolean
inheritedFrom	Indicates the parent scope from which this policy is inherited, or 'null' if it is not inherited (modified specifically for the current scope).	false	enum
ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Update Site - body - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean
isDefault	True if this is the tenant policy	false	boolean
isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean
mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean
networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Update Site - body - remoteOpsForensics table

remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Update Site - body - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean
researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first registration	false	boolean
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

Update Site - body - agentUi

Name	Description	Required	Value
agentUiOn	Agent ui on	false	boolean
contactCompany	Contact company	false	string
contactDirectMessage	Contact direct message	false	string
contactEmail	Contact email	false	string
contactFreeText	Contact free text	false	string
contactOther	Contact other	false	string
contactPhoneNumber	Contact phone number	false	string
contactSupportWebsite	Contact support website	false	string
devicePopUpNotifications	Device pop up notifications	false	boolean
maxEventAgeDays	Max event age days	false	integer
showAgentWarnings	Show agent warnings	false	boolean

showDeviceTab	Show device tab	false	boolean
showQuarantineTab	Show quarantine tab	false	boolean
showSupport	Show support	false	boolean
showSuspicious	Show suspicious	false	boolean
threatPopUpNotifications	Threat pop up notifications	false	boolean

Update Site - body - autoFileUpload

Name	Description	Required	Value
enabled	Automatic file upload on/off	false	boolean
includeBenignFiles	Upload benign files	false	boolean
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum file size (MB) to upload	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalDiskUsage	Maximum local disk usage (MB) for uploaded files	false	integer
maxLocalDiskUsageLimit	Limit for the maximum local disk usage (MB) for uploaded files	false	integer

Update Site - body - dvAttributesPerEventType

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	see Update Site - body - autoInstallBrowserExtensions table
behavioralIndicators	Behavioral indicators event	false	see Update Site - body - behavioralIndicators table
commandScripts	Command scripts event	false	see Update Site - body - commandScripts table
crossProcess	Cross process event	false	see Update Site - body - crossProcess table
dataMasking	Data masking	false	see Update Site - body - dataMasking table
dllModuleLoad	DLL module load event	false	see Update Site - body - dllModuleLoad table
dns	Network event - DNS	false	see Update Site - body - dns table

driver	Driver	false	see Update Site - body - driver table
externalDeviceActivity	External Device Activity	false	see Update Site - body - externalDeviceActivity table
file	File event	false	see Update Site - body - file table
ip	Network event - IP	false	see Update Site - body - ip table
login	User login/logout event	false	see Update Site - body - login table
namedPipe	Named Pipe	false	see Update Site - body - namedPipe table
namedPipeExtended	Named Pipe Extended	false	see Update Site - body - namedPipeExtended table
openDirectoryActivity	Open Directory Activity	false	see Update Site - body - openDirectoryActivity table
process	Process event	false	see Update Site - body - process table
profileActivity	Profile Activity	false	see Update Site - body - profileActivity table
registry	Registry event	false	see Update Site - body - registry table
scheduledTask	Scheduled task event	false	see Update Site - body - scheduledTask table
smartFileMonitoring	Smart file monitoring	false	see Update Site - body - smartFileMonitoring table
url	URL Actions event	false	see Update Site - body - url table
userSubstitution	User Substitution	false	see Update Site - body - userSubstitution table
windowsEventLogs	Windows Event Log	false	see Update Site - body - windowsEventLogs table
windowsEventLogsExtended	Windows Event Log Extended	false	see Update Site - body - windowsEventLogsExtended table

Update Site - body - autoInstallBrowserExtensions

Name	Description	Required	Value
autoInstallBrowserExtensions	Auto install browser extensions	false	boolean

Update Site - body - behavioralIndicators

Name	Description	Required	Value
dvEventTypeBehavioralIndicators	Behavioral indicators event	false	boolean

Update Site - body - commandScripts

Name	Description	Required	Value
dvEventTypeCommandScripts	Command scripts event	false	boolean

Update Site - body - crossProcess

Name	Description	Required	Value
dvEventTypeCrossProcessDuplicateProcess	Duplicate Process Event Type	false	boolean
dvEventTypeCrossProcessDuplicateThread	Duplicate Thread Event Type	false	boolean
dvEventTypeCrossProcessOpenProcesses	Open Process Event Type	false	boolean
dvEventTypeCrossProcessRemoteThread	Remote Thread Event Type	false	boolean

Update Site - body - dataMasking

Name	Description	Required	Value
dataMasking	Data masking	false	boolean

Update Site - body - dllModuleLoad

Name	Description	Required	Value
dvEventTypeDllModuleLoad	DLL module load event	false	boolean

Update Site - body - dns

Name	Description	Required	Value
dvEventTypeDns	Network event - DNS	false	boolean
dvEventTypeExtendedDns	Extended DNS event	false	boolean

Update Site - body - driver

Name	Description	Required	Value
dvEventTypeDriverLoad	Driver Load	false	boolean

Update Site - body - externalDeviceActivity

Name	Description	Required	Value
dvEventTypeExternalDeviceConnect	External Device Connect Event Type	false	boolean
dvEventTypeExternalDeviceDisconnect	External Device Disconnect Event Type	false	boolean

Update Site - body - file

Name	Description	Required	Value
dvEventTypeFileCreation	File Creation Event Type	false	boolean
dvEventTypeFileDeletion	File Deletion Event Type	false	boolean
dvEventTypeFileModification	File Modification Event Type	false	boolean
dvEventTypeFileRename	File Rename Event Type	false	boolean
fullDiskScan	File Scan Event Type	false	boolean

Update Site - body - ip

Name	Description	Required	Value
dvEventTypeIpConnect	IP Connect Event Type	false	boolean
dvEventTypeIpListen	IP Listen Event Type	false	boolean

Update Site - body - login

Name	Description	Required	Value
------	-------------	----------	-------

dvEventTypeLoginLoggedIn	User Login Event Type	false	boolean
dvEventTypeLoginLoggedOut	User Logout Event Type	false	boolean

Update Site - body - namedPipe

Name	Description	Required	Value
dvEventTypeNamedPipeConnection	Named Pipe Connection Event Type	false	boolean
dvEventTypeNamedPipeCreation	Named Pipe Creation Event Type	false	boolean

Update Site - body - namedPipeExtended

Name	Description	Required	Value
namedPipeExtended	Named Pipe Connection Extended Event Type	false	boolean

Update Site - body - openDirectoryActivity

Name	Description	Required	Value
dvEventTypeOpenDirectoryAddAttributeValue	Add Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryAddMemberToGroup	Add Member to Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateGroup	Create Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateUser	Create User Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteGroup	Delete Group Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteUser	Delete User Event Type	false	boolean
dvEventTypeOpenDirectoryDisableUser	Disable User Event Type	false	boolean
dvEventTypeOpenDirectoryEnableUser	Enable User Event Type	false	boolean

r			
dvEventTypeOpenDirectoryModifyPassword	Modify Password Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveAttributeValue	Remove Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveMemberFromGroup	Remove Member from Group Event Type	false	boolean
dvEventTypeOpenDirectorySetAttributeValues	Set Attribute Values Event Type	false	boolean
dvEventTypeOpenDirectorySetMembersOfGroup	Set Members of Group Event Type	false	boolean

Update Site - body - process

Name	Description	Required	Value
dvEventTypeProcessCreation	Process Creation Event Type	false	boolean
dvEventTypeProcessExit	Process Exit Event Type	false	boolean
dvEventTypeProcessModification	Process Termination Event Type	false	boolean

Update Site - body - profileActivity

Name	Description	Required	Value
dvEventTypeProfileAddition	Profile Addition Event Type	false	boolean
dvEventTypeProfileRemoval	Profile Removal Event Type	false	boolean

Update Site - body - registry

Name	Description	Required	Value
dvEventTypeRegistryKeyCreated	Registry Key Created Event Type	false	boolean
dvEventTypeRegistryKeyDelete	Registry Key Delete Event Type	false	boolean
dvEventTypeRegistryKeyExport	Registry Key Export Event Type	false	boolean
dvEventTypeRegistryKeyImport	Registry Key Import Event Type	false	boolean

dvEventTypeRegistryKeyRename	Registry Key Rename Event Type	false	boolean
dvEventTypeRegistryKeySecurityChanged	Registry Key Security Changed Event Type	false	boolean
dvEventTypeRegistryValueCreated	Registry Value Crated Event Type	false	boolean
dvEventTypeRegistryValueDeleted	Registry Value Deleted Event Type	false	boolean
dvEventTypeRegistryValueModified	Registry Value Modified Event Type	false	boolean

Update Site - body - scheduledTask

Name	Description	Required	Value
dvEventTypeScheduledTaskDelete	Scheduled Task Delete Event Type	false	boolean
dvEventTypeScheduledTaskRegister	Scheduled Task Register Event Type	false	boolean
dvEventTypeScheduledTaskStart	Scheduled Task Start Event Type	false	boolean
dvEventTypeScheduledTaskTrigger	Scheduled Task Trigeer Event Type	false	boolean
dvEventTypeScheduledTaskUpdate	Scheduled Task Update Event Type	false	boolean

Update Site - body - smartFileMonitoring

Name	Description	Required	Value
smartFileMonitoring	Smart file monitoring	false	boolean

Update Site - body - url

Name	Description	Required	Value
dvEventTypeUrl	URL Actions event	false	boolean

Update Site - body - userSubstitution

Name	Description	Required	Value
dvEventTypeSu	su Event Type	false	boolean

dvEventTypeSudo	sudo Event Type	false	boolean
-----------------	-----------------	-------	---------

Update Site - body - windowsEventLogs

Name	Description	Required	Value
dvEventTypeWindowsEventLogCreation	Windows Event Log Creation Event Type	false	boolean

Update Site - body - windowsEventLogsExtended

Name	Description	Required	Value
windowsEventLogsExtended	Windows Event Log Extended Event Type	false	boolean

Update Site - body - engines

Name	Description	Required	Value
applicationControl	application control	false	enum
applicationDetection	application detection	false	enum
dataFiles	data files	false	enum
driftDetection	drift detection	false	enum
executables	executables	false	enum
exploits	exploits	false	enum
idr	idr	false	enum
lateralMovement	lateral movement	false	enum
networkProtection	network protection	false	enum
penetration	penetration	false	enum
preExecution	on-write	false	enum
preExecutionSuspicious	pre execution suspicious	false	enum
pup	potentially unwanted applications (PUP)	false	enum

remoteShell	remote shell	false	enum
reputation	reputation	false	enum

Update Site - body - forensicsAutoTriggering

Name	Description	Required	Value
linuxEnabled	True if linux forensics is enabled	false	boolean
linuxProfileId	The profile id for the linux forensics	false	string
linuxProfileName	The profile name for the linux forensics	false	string
macosEnabled	True if macos forensics is enabled	false	boolean
macosProfileId	The profile id for the macos forensics	false	string
macosProfileName	The profile name for the macos forensics	false	string
windowsEnabled	True if windows forensics is enabled	false	boolean
windowsProfileId	The profile id for the windows forensics	false	string
windowsProfileName	The profile name for the windows forensics	false	string

Update Site - body - identityConfigurationSettings

Name	Description	Required	Value
identityMaxCpuThreshold	Identity maximum CPU threshold	false	integer
identityMaxDefinedMemoryLimit	Identity maximum defined memory limit in MB	false	integer
identityMaxMemoryLimit	Identity maximum memory limit in MB	false	integer
identityMaxMemoryUsage	Identity maximum memory usage	false	integer
identityThresholdMonitoring	True if Identity threshold monitoring is enabled	false	boolean

Update Site - body - iocAttributes

Name	Description	Required	Value
autoInstallBrowserExtensions	Update auto install browser extensions	false	boolean
behavioralIndicators	Update behavioral indicators	false	boolean
commandScripts	Update command scripts	false	boolean
crossProcess	Update cross process	false	boolean
dataMasking	Update data masking	false	boolean
dllModuleLoad	Update DLL module load	false	boolean
dns	Network event - DNS	false	boolean
driver	Driver	false	boolean
externalDeviceActivity	External Device Activity	false	boolean
fds	Full disk scan	false	boolean
file	File event	false	boolean
ip	Network event - IP	false	boolean
login	User login/logout event	false	boolean
namedPipe	Named Pipe	false	boolean
namedPipeExtended	Named Pipe Extended	false	boolean
openDirectoryActivity	Open Directory Activity	false	boolean
process	Process creation event	false	boolean
profileActivity	Profile Activity	false	boolean
registry	Registry event	false	boolean
scheduledTask	Scheduled task event	false	boolean
smartFileMonitoring	Smart file monitoring	false	boolean
url	loc URI	false	boolean
userSubstitution	User Substitution	false	boolean
windowsEventLogs	Windows Event Log	false	boolean
windowsEventLogsExtended	Windows Event Log Extended	false	boolean

Update Site - body - remoteOpsForensics

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection	false	integer

	process		
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Update Site - body - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Update Site - body - promptFields

Name	Description	Required	Value
promptRegion	Region associated with the prompt	false	enum

promptTenantName	Tenant name associated with the prompt	false	string
promptUserEmail	Email of the user associated with the prompt	false	string
promptUserName	Name of the user associated with the prompt	false	string

Delete Site

DELETE /web/api/v2.1/sites/{site_id}

Delete the Site of the given ID. To get the ID, run "sites".
You must have an Admin role with scope access that includes the Site.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Delete Site - response - data table
errors	Errors	false	array

Delete Site - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Get Site registration token by ID

GET /web/api/v2.1/sites/{site_id}/token

Get the registration token of the Site of the ID.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

404 - Site not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get Site registration token by ID - response - data table
errors	Errors	false	array

Get Site registration token by ID - response - data

Name	Description	Required	Value
token	Token	false	string

Revert Policy

PUT /web/api/v2.1/sites/{site_id}/revert-policy

When a Site is created through the Console, it gets the Global policy.
If you change the policy and later want it set to the Global policy, use this command.
The site_id is required. You can get it from "sites".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Revert Policy - response - data table
errors	Errors	false	array

Revert Policy - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Body Schema

Name	Description	Required	Value
data	Data	false	see Revert Policy - body - data table

Revert Policy - body - data

Name	Description	Required	Value
id	Id	false	string

Create duplicate site

POST /web/api/v2.1/sites/duplicate-site

[DEPRECATED] Create duplicate site.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Create duplicate site - response - data table
errors	Errors	false	array

Create duplicate site - response - data

Name	Description	Required	Value
accountId	Account id	false	string
accountName	Account name	false	string
activeLicenses	Number of active licenses for the site	false	integer
createdAt	Timestamp of site creation	false	string
creator	Full name of the creating user	false	string
creatorId	Id of the creating user	false	string
description	The user-defined description for the Site	false	string
expiration	Expiration	false	string
externalId	Id of CRM external system	false	string
healthStatus	Obsolete. Always true	false	boolean
id	Site ID	false	string

ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Create duplicate site - body - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean
isDefault	True if this is the tenant policy	false	boolean
isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean

mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean
networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Create duplicate site - body - remoteOpsForensics table
remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Create duplicate site - body - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean
researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first registration	false	boolean
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

Create duplicate site - body - agentUi

Name	Description	Required	Value
agentUiOn	Agent ui on	false	boolean
contactCompany	Contact company	false	string
contactDirectMessage	Contact direct message	false	string
contactEmail	Contact email	false	string

contactFreeText	Contact free text	false	string
contactOther	Contact other	false	string
contactPhoneNumber	Contact phone number	false	string
contactSupportWebsite	Contact support website	false	string
devicePopUpNotifications	Device pop up notifications	false	boolean
maxEventAgeDays	Max event age days	false	integer
showAgentWarnings	Show agent warnings	false	boolean
showDeviceTab	Show device tab	false	boolean
showQuarantineTab	Show quarantine tab	false	boolean
showSupport	Show support	false	boolean
showSuspicious	Show suspicious	false	boolean
threatPopUpNotifications	Threat pop up notifications	false	boolean

Create duplicate site - body - autoFileUpload

Name	Description	Required	Value
enabled	Automatic file upload on/off	false	boolean
includeBenignFiles	Upload benign files	false	boolean
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum file size (MB) to upload	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalDiskUsage	Maximum local disk usage (MB) for uploaded files	false	integer
maxLocalDiskUsageLimit	Limit for the maximum local disk usage (MB) for uploaded files	false	integer

Create duplicate site - body - dvAttributesPerEventType

Name	Description	Required	Value

Name	Description	Required	Value
dvEventTypeProfileAddition	Profile Addition Event Type	false	boolean
dvEventTypeProfileRemoval	Profile Removal Event Type	false	boolean

Create duplicate site - body - registry

Name	Description	Required	Value
------	-------------	----------	-------

dvEventTypeRegistryKeyCreated	Registry Key Created Event Type	false	boolean
dvEventTypeRegistryKeyDelete	Registry Key Delete Event Type	false	boolean
dvEventTypeRegistryKeyExport	Registry Key Export Event Type	false	boolean
dvEventTypeRegistryKeyImport	Registry Key Import Event Type	false	boolean
dvEventTypeRegistryKeyRename	Registry Key Rename Event Type	false	boolean
dvEventTypeRegistryKeySecurityChanged	Registry Key Security Changed Event Type	false	boolean
dvEventTypeRegistryValueCreated	Registry Value Crated Event Type	false	boolean
dvEventTypeRegistryValueDeleted	Registry Value Deleted Event Type	false	boolean
dvEventTypeRegistryValueModified	Registry Value Modified Event Type	false	boolean

Create duplicate site - body - scheduledTask

Name	Description	Required	Value
dvEventTypeScheduledTaskDelete	Scheduled Task Delete Event Type	false	boolean
dvEventTypeScheduledTaskRegister	Scheduled Task Register Event Type	false	boolean
dvEventTypeScheduledTaskStart	Scheduled Task Start Event Type	false	boolean
dvEventTypeScheduledTaskTrigger	Scheduled Task Trigeer Event Type	false	boolean
dvEventTypeScheduledTaskUpdate	Scheduled Task Update Event Type	false	boolean

Create duplicate site - body - smartFileMonitoring

Name	Description	Required	Value
smartFileMonitoring	Smart file monitoring	false	boolean

Create duplicate site - body - url

Name	Description	Required	Value
dvEventTypeUrl	URL Actions event	false	boolean

Create duplicate site - body - userSubstitution

Name	Description	Required	Value
dvEventTypeSu	su Event Type	false	boolean
dvEventTypeSudo	sudo Event Type	false	boolean

Create duplicate site - body - windowsEventLogs

Name	Description	Required	Value
dvEventTypeWindowsEventLogCreation	Windows Event Log Creation Event Type	false	boolean

Create duplicate site - body - windowsEventLogsExtended

Name	Description	Required	Value
windowsEventLogsExtended	Windows Event Log Extended Event Type	false	boolean

Create duplicate site - body - engines

Name	Description	Required	Value
applicationControl	application control	false	enum
applicationDetection	application detection	false	enum
dataFiles	data files	false	enum
driftDetection	drift detection	false	enum
executables	executables	false	enum
exploits	exploits	false	enum
idr	idr	false	enum
lateralMovement	lateral movement	false	enum
networkProtection	network protection	false	enum
penetration	penetration	false	enum

preExecution	on-write	false	enum
preExecutionSuspicious	pre execution suspicious	false	enum
pup	potentially unwanted applications (PUP)	false	enum
remoteShell	remote shell	false	enum
reputation	reputation	false	enum

Create duplicate site - body - forensicsAutoTriggering

Name	Description	Required	Value
linuxEnabled	True if linux forensics is enabled	false	boolean
linuxProfileId	The profile id for the linux forensics	false	string
linuxProfileName	The profile name for the linux forensics	false	string
macosEnabled	True if macos forensics is enabled	false	boolean
macosProfileId	The profile id for the macos forensics	false	string
macosProfileName	The profile name for the macos forensics	false	string
windowsEnabled	True if windows forensics is enabled	false	boolean
windowsProfileId	The profile id for the windows forensics	false	string
windowsProfileName	The profile name for the windows forensics	false	string

Create duplicate site - body - identityConfigurationSettings

Name	Description	Required	Value
identityMaxCpuThreshold	Identity maximum CPU threshold	false	integer
identityMaxDefinedMemoryLimit	Identity maximum defined memory limit in MB	false	integer
identityMaxMemoryLimit	Identity maximum memory limit in MB	false	integer
identityMaxMemoryUsage	Identity maximum memory usage	false	integer

identityThresholdMonitoring	True if Identity threshold monitoring is enabled	false	boolean
-----------------------------	--	-------	---------

Create duplicate site - body - iocAttributes

Name	Description	Required	Value
autoInstallBrowserExtensions	Update auto install browser extensions	false	boolean
behavioralIndicators	Update behavioral indicators	false	boolean
commandScripts	Update command scripts	false	boolean
crossProcess	Update cross process	false	boolean
dataMasking	Update data masking	false	boolean
dllModuleLoad	Update DLL module load	false	boolean
dns	Network event - DNS	false	boolean
driver	Driver	false	boolean
externalDeviceActivity	External Device Activity	false	boolean
fds	Full disk scan	false	boolean
file	File event	false	boolean
ip	Network event - IP	false	boolean
login	User login/logout event	false	boolean
namedPipe	Named Pipe	false	boolean
namedPipeExtended	Named Pipe Extended	false	boolean
openDirectoryActivity	Open Directory Activity	false	boolean
process	Process creation event	false	boolean
profileActivity	Profile Activity	false	boolean
registry	Registry event	false	boolean
scheduledTask	Scheduled task event	false	boolean
smartFileMonitoring	Smart file monitoring	false	boolean
url	loc URI	false	boolean
userSubstitution	User Substitution	false	boolean
windowsEventLogs	Windows Event Log	false	boolean
windowsEventLogsExtended	Windows Event Log Extended	false	boolean

Create duplicate site - body - remoteOpsForensics

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection process	false	integer
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Create duplicate site - body - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer
maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Create Site and User

POST /web/api/v2.1/site-with-admin

Create a Site and an Admin role user. This requires an Admin role with a Global scope or Account scope that has permissions over the Account to which the Site will belong.

You must have a license for a new Site.

In the body of this request, include the policy and user properties.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Create Site and User - response - data table
errors	Errors	false	array

Create Site and User - response - data

Name	Description	Required	Value
accountId	Account id	false	string
accountName	Account name	false	string
activeLicenses	Number of active licenses for the site	false	integer
createdAt	Timestamp of site creation	false	string
description	The user-defined description for the Site	false	string
expiration	Expiration	false	string
externalId	Id of CRM external system	false	string
healthStatus	Obsolete. Always true	false	boolean
id	Site ID	false	string
inheritAccountExpiration	Inherit account expiration	false	boolean
irFields	Ir fields	false	see Create Site and User - response - irFields table
isDefault	Is default	false	boolean
licenses	The site licenses	false	see Create Site and User - response - licenses table
name	Name	false	string
promptFields	Prompt fields	false	see Create Site and User - response - promptFields table
registrationToken	[DEPRECATED] token generation in dedicated endpoint - /sites/<site_id>/token	false	
siteType	Site type	false	string
sku	[DEPRECATED] The sku of product features active for this site	false	enum
state	Site state	false	enum
suite	[DEPRECATED] Use sku instead	false	enum
totalLicenses	Total licenses	false	integer
updatedAt	Timestamp of last update	false	string
usageType	Usage type	false	string
user	The data of the newly created site admin	false	see Create Site and User - response - user table

Create Site and User - response - irFields

Name	Description	Required	Value
companyName	The customer's company name	true	string
contactEmail	Business email of the customer contact. Must not match the IR partner domain, the submitter's own domain, or a free/personal email provider (e.g. Gmail, Yahoo, Hotmail)	true	string
contactFirstName	First name of the customer contact	true	string
contactLastName	Last name of the customer contact	true	string
country	Country of the customer	true	string
industry	Industry vertical of the customer	true	enum
numberOfEmployeesEndpoints	Estimated number of employees or endpoints at the customer	true	integer
city	City of the customer	false	string
postal	Postal / ZIP code of the customer	false	string
region	State or region within the country	false	string

Create Site and User - response - licenses

Name	Description	Required	Value
bundles	The licenses Bundles	false	see Create Site and User - response - bundles table
modules	The licenses Add-ons	false	see Create Site and User - response - modules table
settings	The licenses Settings	false	see Create Site and User - response - settings table

Create Site and User - response - bundles

Name	Description	Required	Value
displayName	The Bundle display name	false	string
majorVersion	The Bundle major version	false	integer
minorVersion	The Bundle minor version	false	integer

name	The Bundle internal api name	false	string
surfaces	The Surfaces in the Bundle	false	see Create Site and User - response - surfaces table
totalSurfaces	The total number of Surfaces in this Bundle. -1 indicates unlimited count.	false	integer

Create Site and User - response - surfaces

Name	Description	Required	Value
count	The Surface count. -1 indicates unlimited count	false	integer
name	The Surface name.	false	string

Create Site and User - response - modules

Name	Description	Required	Value
displayName	The Add-on display name	false	string
majorVersion	The Add-on major version	false	integer
name	The Add-on internal api name	false	string

Create Site and User - response - settings

Name	Description	Required	Value
displayName	[DEPRECATED] The Setting display name	false	string
groupName	The Setting group name	false	
setting	The Setting display name	false	
settingGroup	[DEPRECATED] The Setting group name	false	string
settingGroupDisplayName	The Setting group display name	false	string

Create Site and User - response - promptFields

Name	Description	Required	Value
promptRegion	Region associated with the prompt	false	enum
promptTenantName	Tenant name associated with the prompt	false	string
promptUserEmail	Email of the user associated with the prompt	false	string
promptUserName	Name of the user associated with the prompt	false	string

Create Site and User - response - user

Name	Description	Required	Value
email	Email	true	string
fullName	Full name	true	string
id	Id	false	string
primaryTwoFaMethod	Primary two fa method	false	string
twoFaEnabled	Two fa enabled	false	boolean

Body Schema

Name	Description	Required	Value
data	Data	true	see Create Site and User - body - data table

Create Site and User - body - data

Name	Description	Required	Value
name	Name	true	string
user	The data of the admin user been created	true	see Create Site and User - body - user table
accountId	Associated account. Leave empty in single-account management consoles.	false	string
accountSfld		false	string
description	The user-defined description for the Site	false	string
expiration	Expiration	false	string
externalId	Id of CRM external system	false	string
inheritAccountExpiration	True, if expiration should be inherited from account	false	boolean
inherits	True if the policy is inherited from Tenant, False if the site has its own edited policy	false	boolean
irFields	IR related fields	false	see Create Site and User - body - irFields table
licenses	The license configuration for the Site	false	see Create Site and User - body - licenses table
policy	Policy is mandatory if inherits is false, else it will be ignored.	false	see Create Site and User - body - policy table
promptFields	Prompt related fields	false	see Create Site and User - body - promptFields table
siteType	Site types	false	enum
sku	[DEPRECATED] Use licenses instead	false	enum
suite	[DEPRECATED] Use licenses instead	false	enum
totalLicenses	Total licenses	false	integer
unlimitedExpiration	Is expiration unlimited, if not expiration should be supplied	false	boolean
unlimitedLicenses	Is the site unlimited, if not then total_licenses must be supplied	false	boolean
usageType	Usage type	false	enum

Create Site and User - body - user

Name	Description	Required	Value
email	Email	true	string
fullName	Full name	true	string
id	Id	false	string
password	Password	false	string
primaryTwoFaMethod	Primary two fa method	false	string
twoFaEnabled	Two fa enabled	false	boolean

Create Site and User - body - irFields

Name	Description	Required	Value
companyName	The customer's company name	true	string
contactEmail	Business email of the customer contact. Must not match the IR partner domain, the submitter's own domain, or a free/personal email provider (e.g. Gmail, Yahoo, Hotmail)	true	string
contactFirstName	First name of the customer contact	true	string
contactLastName	Last name of the customer contact	true	string
country	Country of the customer	true	string
industry	Industry vertical of the customer	true	enum
numberOfEmployeesEndpoints	Estimated number of employees or endpoints at the customer	true	integer
city	City of the customer	false	string
postal	Postal / ZIP code of the customer	false	string
region	State or region within the country	false	string

Create Site and User - body - licenses

Name	Description	Required	Value
------	-------------	----------	-------

Name	Description	Required	Value
name		true	string
count	The number of licenses per Surface. -1 indicates unlimited count.	false	integer

Create Site and User - body - modules

Name	Description	Required	Value
name		true	string

Create Site and User - body - policy

Name	Description	Required	Value
agentLoggingOn	True if logging is enabled in the agent	false	boolean
agentNotification	[DEPRECATED] Show end point notification on suspicious.Replaced by 'show_suspicious' in the agent UI section	false	boolean
agentUi	Agent ui	false	see Create Site and User - body - agentUi table

agentUiOn	[DEPRECATED] Show/hide Agent UI. Moved inside the agent UI section	false	boolean
allowRemoteShell	True if Remote Shell is enabled for the scope	false	boolean
allowUnprotectByApprovedProcess	Allow Unprotect By Approved Process on/off	false	boolean
antiTamperingOn	Anti tampering on/off	false	boolean
autoDecommissionDays	Automatic decommission period in days	false	integer
autoDecommissionOn	Auto decommission on	false	boolean
autoFileUpload	Automatic file upload configuration	false	see Create Site and User - body - autoFileUpload table
autoImmuneOn	Automatic immune on/off - this value must be true since all policies are immune by default	false	boolean
autoMitigationAction	Default action for auto mitigation	false	string
cloudValidationOn	Cloud validation on	false	
createdAt	Timestamp of policy creation	false	string
driftDetectionDelayTime	Drift detection delay time in seconds	false	integer
driverBlocking	Suspicious driver blocking engine on/off	false	boolean
dvAttributesPerEventType	The DV attributes	false	see Create Site and User - body - dvAttributesPerEventType table
engines	The engines statuses	false	see Create Site and User - body - engines table
forensicsAutoTriggering	Forensics auto triggering configuration	false	see Create Site and User - body - forensicsAutoTriggering table
identityConfigurationSettings	Identity configuration	false	see Create Site and User - body - identityConfigurationSettings table
identityEndpointReporting	Endpoint reporting level	false	enum
identityOn	Identity module on/off	false	boolean
identityReportInterval	Identity telemetry report interval in minutes	false	integer
identityThrottlingInterval	Identity duplicate command consolidation interval in minutes	false	integer
identityUpdateInterval	Identity update interval in minutes	false	integer
informationalAlertsOn	Informational alerts on/off	false	boolean
inheritedFrom	Indicates the parent scope from which this policy is inherited, or 'null' if it is not inherited (modified	false	enum

	specifically for the current scope).		
ioc	True if ioc is enabled	false	boolean
iocAttributes	The ioc attributes	false	see Create Site and User - body - iocAttributes table
iocSupported	ioc supported for the scope	false	boolean
isDefault	True if this is the tenant policy	false	boolean
isDvPolicyPerEventType	FE indication as to how to display DV policy	false	boolean
logCollectorEnabled	Log collector on/off	false	boolean
mitigationMode	Mitigation modes	false	enum
mitigationModeSuspicious	Mitigation mode	false	enum
monitorOnExecute	Monitor on execute on/off	false	boolean
monitorOnWrite	Monitor on write	false	boolean
networkProtectionInfra	Network Protection Infrastructure On/Off	false	boolean
networkQuarantineOn	Network quarantine on	false	boolean
remoteOpsForensics	Remote ops forensics configuration	false	see Create Site and User - body - remoteOpsForensics table
remoteScriptOrchestration	Remote script orchestration upload limits configuration	false	see Create Site and User - body - remoteScriptOrchestration table
removeMacros	Determines if macros should be removed from macro threats	false	boolean
removeMacrosML	Determines if malicious macros should be mitigated using ML Models	false	boolean
researchOn	Share data with SentinelOne	false	boolean
scanNewAgents	If True initiate full disk scan upon first registration	false	boolean
signedDriverBlockingOn	Suspicious signed driver blocking on/off	false	boolean
smbLateralMovementMitigation	SMB Lateral Movement Mitigation	false	boolean
snapshotsOn	True if snapshots are enabled	false	boolean
unsignedDriverBlockingOn	Suspicious unsigned driver blocking on/off	false	boolean
updatedAt	Time of the last update to the policy	false	string
userFullName	The user that created the policy	false	string
userId	The user id	false	string

Create Site and User - body - agentUi

Name	Description	Required	Value

dvEventTypeCrossProcessDuplicateProcess	Duplicate Process Event Type	false	boolean
dvEventTypeCrossProcessDuplicateThread	Duplicate Thread Event Type	false	boolean
dvEventTypeCrossProcessOpenProcesses	Open Process Event Type	false	boolean
dvEventTypeCrossProcessRemoteThread	Remote Thread Event Type	false	boolean

Create Site and User - body - dataMasking

Name	Description	Required	Value
dataMasking	Data masking	false	boolean

Create Site and User - body - dllModuleLoad

Name	Description	Required	Value
dvEventTypeDllModuleLoad	DLL module load event	false	boolean

Create Site and User - body - dns

Name	Description	Required	Value
dvEventTypeDns	Network event - DNS	false	boolean
dvEventTypeExtendedDns	Extended DNS event	false	boolean

Create Site and User - body - driver

Name	Description	Required	Value
dvEventTypeDriverLoad	Driver Load	false	boolean

Create Site and User - body - externalDeviceActivity

Name	Description	Required	Value
dvEventTypeExternalDeviceConnect	External Device Connect Event Type	false	boolean
dvEventTypeExternalDeviceDisconnect	External Device Disconnect Event Type	false	boolean

Create Site and User - body - file

Name	Description	Required	Value
dvEventTypeFileCreation	File Creation Event Type	false	boolean
dvEventTypeFileDeletion	File Deletion Event Type	false	boolean
dvEventTypeFileModification	File Modification Event Type	false	boolean
dvEventTypeFileRename	File Rename Event Type	false	boolean

fullDiskScan	File Scan Event Type	false	boolean
--------------	----------------------	-------	---------

Create Site and User - body - ip

Name	Description	Required	Value
dvEventTypeIpConnect	IP Connect Event Type	false	boolean
dvEventTypeIpListen	IP Listen Event Type	false	boolean

Create Site and User - body - login

Name	Description	Required	Value
dvEventTypeLoginLoggedIn	User Login Event Type	false	boolean
dvEventTypeLoginLoggedOut	User Logout Event Type	false	boolean

Create Site and User - body - namedPipe

Name	Description	Required	Value
dvEventTypeNamedPipeConnection	Named Pipe Connection Event Type	false	boolean
dvEventTypeNamedPipeCreation	Named Pipe Creation Event Type	false	boolean

Create Site and User - body - namedPipeExtended

Name	Description	Required	Value
namedPipeExtended	Named Pipe Connection Extended Event Type	false	boolean

Create Site and User - body - openDirectoryActivity

Name	Description	Required	Value
------	-------------	----------	-------

dvEventTypeOpenDirectoryAddAttributeValue	Add Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryAddMemberToGroup	Add Member to Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateGroup	Create Group Event Type	false	boolean
dvEventTypeOpenDirectoryCreateUser	Create User Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteGroup	Delete Group Event Type	false	boolean
dvEventTypeOpenDirectoryDeleteUser	Delete User Event Type	false	boolean
dvEventTypeOpenDirectoryDisableUser	Disable User Event Type	false	boolean
dvEventTypeOpenDirectoryEnableUser	Enable User Event Type	false	boolean
dvEventTypeOpenDirectoryModifyPassword	Modify Password Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveAttributeValue	Remove Attribute Value Event Type	false	boolean
dvEventTypeOpenDirectoryRemoveMemberFromGroup	Remove Member from Group Event Type	false	boolean
dvEventTypeOpenDirectorySetAttributeValues	Set Attribute Values Event Type	false	boolean
dvEventTypeOpenDirectorySetMembersOfGroup	Set Members of Group Event Type	false	boolean

Create Site and User - body - process

Name	Description	Required	Value
dvEventTypeProcessCreation	Process Creation Event Type	false	boolean
dvEventTypeProcessExit	Process Exit Event Type	false	boolean
dvEventTypeProcessModification	Process Termination Event Type	false	boolean

Create Site and User - body - profileActivity

Name	Description	Required	Value
dvEventTypeProfileAddition	Profile Addition Event Type	false	boolean
dvEventTypeProfileRemoval	Profile Removal Event Type	false	boolean

Create Site and User - body - registry

Name	Description	Required	Value
dvEventTypeRegistryKeyCreated	Registry Key Created Event Type	false	boolean
dvEventTypeRegistryKeyDelete	Registry Key Delete Event Type	false	boolean
dvEventTypeRegistryKeyExport	Registry Key Export Event Type	false	boolean
dvEventTypeRegistryKeyImport	Registry Key Import Event Type	false	boolean
dvEventTypeRegistryKeyRename	Registry Key Rename Event Type	false	boolean
dvEventTypeRegistryKeySecurityChanged	Registry Key Security Changed Event Type	false	boolean
dvEventTypeRegistryValueCreated	Registry Value Crated Event Type	false	boolean
dvEventTypeRegistryValueDeleted	Registry Value Deleted Event Type	false	boolean
dvEventTypeRegistryValueModified	Registry Value Modified Event Type	false	boolean

Create Site and User - body - scheduledTask

Name	Description	Required	Value
dvEventTypeScheduledTaskDelete	Scheduled Task Delete Event Type	false	boolean
dvEventTypeScheduledTaskRegister	Scheduled Task Register Event Type	false	boolean
dvEventTypeScheduledTaskStart	Scheduled Task Start Event Type	false	boolean
dvEventTypeScheduledTaskTrigger	Scheduled Task Trigeer Event Type	false	boolean
dvEventTypeScheduledTaskUpdate	Scheduled Task Update Event Type	false	boolean

Create Site and User - body - smartFileMonitoring

Name	Description	Required	Value
------	-------------	----------	-------

smartFileMonitoring	Smart file monitoring	false	boolean
---------------------	-----------------------	-------	---------

Create Site and User - body - url

Name	Description	Required	Value
dvEventTypeUrl	URL Actions event	false	boolean

Create Site and User - body - userSubstitution

Name	Description	Required	Value
dvEventTypeSu	su Event Type	false	boolean
dvEventTypeSudo	sudo Event Type	false	boolean

Create Site and User - body - windowsEventLogs

Name	Description	Required	Value
dvEventTypeWindowsEventLogCreation	Windows Event Log Creation Event Type	false	boolean

Create Site and User - body - windowsEventLogsExtended

Name	Description	Required	Value
windowsEventLogsExtended	Windows Event Log Extended Event Type	false	boolean

Create Site and User - body - engines

Name	Description	Required	Value
applicationControl	application control	false	enum
applicationDetection	application detection	false	enum

dataFiles	data files	false	enum
driftDetection	drift detection	false	enum
executables	executables	false	enum
exploits	exploits	false	enum
idr	idr	false	enum
lateralMovement	lateral movement	false	enum
networkProtection	network protection	false	enum
penetration	penetration	false	enum
preExecution	on-write	false	enum
preExecutionSuspicious	pre execution suspicious	false	enum
pup	potentially unwanted applications (PUP)	false	enum
remoteShell	remote shell	false	enum
reputation	reputation	false	enum

Create Site and User - body - forensicsAutoTriggering

Name	Description	Required	Value
linuxEnabled	True if linux forensics is enabled	false	boolean
linuxProfileId	The profile id for the linux forensics	false	string
linuxProfileName	The profile name for the linux forensics	false	string
macosEnabled	True if macos forensics is enabled	false	boolean
macosProfileId	The profile id for the macos forensics	false	string
macosProfileName	The profile name for the macos forensics	false	string
windowsEnabled	True if windows forensics is enabled	false	boolean
windowsProfileId	The profile id for the windows forensics	false	string
windowsProfileName	The profile name for the windows forensics	false	string

Create Site and User - body - identityConfigurationSettings

Name	Description	Required	Value
identityMaxCpuThreshold	Identity maximum CPU threshold	false	integer
identityMaxDefinedMemoryLimit	Identity maximum defined memory limit in MB	false	integer
identityMaxMemoryLimit	Identity maximum memory limit in MB	false	integer
identityMaxMemoryUsage	Identity maximum memory usage	false	integer
identityThresholdMonitoring	True if Identity threshold monitoring is enabled	false	boolean

Create Site and User - body - iocAttributes

Name	Description	Required	Value
autoInstallBrowserExtensions	Update auto install browser extensions	false	boolean
behavioralIndicators	Update behavioral indicators	false	boolean
commandScripts	Update command scripts	false	boolean
crossProcess	Update cross process	false	boolean
dataMasking	Update data masking	false	boolean
dllModuleLoad	Update DLL module load	false	boolean
dns	Network event - DNS	false	boolean
driver	Driver	false	boolean
externalDeviceActivity	External Device Activity	false	boolean
fds	Full disk scan	false	boolean
file	File event	false	boolean
ip	Network event - IP	false	boolean
login	User login/logout event	false	boolean
namedPipe	Named Pipe	false	boolean
namedPipeExtended	Named Pipe Extended	false	boolean
openDirectoryActivity	Open Directory Activity	false	boolean
process	Process creation event	false	boolean
profileActivity	Profile Activity	false	boolean
registry	Registry event	false	boolean

scheduledTask	Scheduled task event	false	boolean
smartFileMonitoring	Smart file monitoring	false	boolean
url	loc URI	false	boolean
userSubstitution	User Substitution	false	boolean
windowsEventLogs	Windows Event Log	false	boolean
windowsEventLogsExtended	Windows Event Log Extended	false	boolean

Create Site and User - body - remoteOpsForensics

Name	Description	Required	Value
cpuLimit	CPU resources limit for collection process	false	integer
enabled	Enabled	false	boolean
maximumDailyUpload	Maximum size to upload daily	false	integer
maximumDailyUploadLimit	Limit for the maximum size to upload daily	false	integer
maximumFileSizeUpload	Maximum size for single file	false	integer
maximumFileSizeUploadLimit	Limit for the maximum file size to upload	false	integer
parsedArtifactsDestination	Default destination of parsed artifacts	false	enum

Create Site and User - body - remoteScriptOrchestration

Name	Description	Required	Value
alwaysUploadStreamToCloud	Always upload streams to cloud	false	boolean
maxDailyFileDownload	Maximum size (MB) to download daily	false	integer
maxDailyFileDownloadLimit	Limit for the maximum size (MB) to download daily	false	integer
maxDailyFileUpload	Maximum size (MB) to upload daily	false	integer
maxDailyFileUploadLimit	Limit for the maximum size (MB) to upload daily	false	integer
maxFileSize	Maximum size in bytes for single file	false	integer

maxFileSizeLimit	Limit for the maximum file size (MB) to upload	false	integer
maxLocalPackageDiskUsage	Maximum local disk usage (MB) for packages	false	integer
maxLocalPackageDiskUsageLimit	Limit for the maximum local disk usage (MB) for packages	false	integer

Create Site and User - body - promptFields

Name	Description	Required	Value
promptRegion	Region associated with the prompt	false	enum
promptTenantName	Tenant name associated with the prompt	false	string
promptUserEmail	Email of the user associated with the prompt	false	string
promptUserName	Name of the user associated with the prompt	false	string

Regenerate Site Key

PUT /web/api/v2.1/sites/{site_id}/regenerate-key

Regenerate the key for the given Site.
To get the site_id, use "sites".

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

403 - No permission for regenerating a key.

404 - Site not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Regenerate Site Key - response - data table
errors	Errors	false	array

Regenerate Site Key - response - data

Name	Description	Required	Value
registrationToken	Registration token	false	string

Reactivate Site

PUT /web/api/v2.1/sites/{site_id}/reactivate

Reactivate an expired Site.

You must have an Admin role with scope access that includes this Site, and you must have a license for the Site.

To get the site_id, run "sites".

Response Messages

200 - Site reactivated

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

404 - Site not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Reactivate Site - response - data table
errors	Errors	false	array

Reactivate Site - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Body Schema

Name	Description	Required	Value
data	Data	true	see Reactivate Site - body - data table

Reactivate Site - body - data

Name	Description	Required	Value
expiration	New expiration date for the site	false	string
unlimited	If false an expiration should be supplied	false	boolean

Expire Site

POST /web/api/v2.1/sites/{site_id}/expire-now

Expire the Site of the given ID (run "sites" to get the ID).
You must have an Admin role with scope access that includes this Site.

Response Messages

200 - Expire site now

401 - Unauthorized access - please sign in and retry.

404 - Site not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Expire Site - response - data table
errors	Errors	false	array

Expire Site - response - data

Name	Description	Required	Value
accountId	Account id	false	string
accountName	Account name	false	string
activeLicenses	Number of active licenses for the site	false	integer
createdAt	Timestamp of site creation	false	string
creator	Full name of the creating user	false	string
creatorId	Id of the creating user	false	string
description	The user-defined description for the Site	false	string
expiration	Expiration	false	string
externalId	Id of CRM external system	false	string
healthStatus	Obsolete. Always true	false	boolean
id	Site ID	false	string
inheritAccountExpiration	Inherit account expiration	false	boolean
irFields	Ir fields	false	see Expire Site - response - irFields table
isDefault	Is default	false	boolean
licenses	The site licenses	false	see Expire Site - response - licenses table
name	Name	false	string
promptFields	Prompt fields	false	see Expire Site - response - promptFields table
registrationToken	[DEPRECATED] token generation in dedicated endpoint - /sites/<site_id>/token	false	
siteType	Site type	false	string
sku	[DEPRECATED] The sku of product features active for this site	false	enum
state	Site state	false	enum
suite	[DEPRECATED] Use sku instead	false	enum
totalLicenses	Total licenses	false	integer
unlimitedExpiration	True if the Site has no expiration date	false	
unlimitedLicenses	True if the Site has unlimited licenses	false	boolean

updatedAt	Timestamp of last update	false	string
usageType	Usage type	false	string

Expire Site - response - irFields

Name	Description	Required	Value
companyName	The customer's company name	true	string
contactEmail	Business email of the customer contact. Must not match the IR partner domain, the submitter's own domain, or a free/personal email provider (e.g. Gmail, Yahoo, Hotmail)	true	string
contactFirstName	First name of the customer contact	true	string
contactLastName	Last name of the customer contact	true	string
country	Country of the customer	true	string
industry	Industry vertical of the customer	true	enum
numberOfEmployeesEndpoints	Estimated number of employees or endpoints at the customer	true	integer
city	City of the customer	false	string
postal	Postal / ZIP code of the customer	false	string
region	State or region within the country	false	string

Expire Site - response - licenses

Name	Description	Required	Value
bundles	The licenses Bundles	false	see Expire Site - response - bundles table
modules	The licenses Add-ons	false	see Expire Site - response - modules table
settings	The licenses Settings	false	see Expire Site - response - settings table

Expire Site - response - bundles

Name	Description	Required	Value
------	-------------	----------	-------

displayName	The Bundle display name	false	string
majorVersion	The Bundle major version	false	integer
minorVersion	The Bundle minor version	false	integer
name	The Bundle internal api name	false	string
surfaces	The Surfaces in the Bundle	false	see Expire Site - response - surfaces table
totalSurfaces	The total number of Surfaces in this Bundle. -1 indicates unlimited count.	false	integer

Expire Site - response - surfaces

Name	Description	Required	Value
count	The Surface count. -1 indicates unlimited count	false	integer
name	The Surface name.	false	string

Expire Site - response - modules

Name	Description	Required	Value
displayName	The Add-on display name	false	string
majorVersion	The Add-on major version	false	integer
name	The Add-on internal api name	false	string

Expire Site - response - settings

Name	Description	Required	Value
displayName	[DEPRECATED] The Setting display name	false	string
groupName	The Setting group name	false	
setting	The Setting display name	false	
settingGroup	[DEPRECATED] The Setting group name	false	string
settingGroupDisplayName	The Setting group display name	false	string

Expire Site - response - promptFields

Name	Description	Required	Value
promptRegion	Region associated with the prompt	false	enum
promptTenantName	Tenant name associated with the prompt	false	string
promptUserEmail	Email of the user associated with the prompt	false	string
promptUserName	Name of the user associated with the prompt	false	string

Update Sites

PUT /web/api/v2.1/sites/update-bulk

Change the properties of the Sites given by IDs.
To get the IDs, run 'sites'.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Update Sites - response - data table
errors	Errors	false	array

Update Sites - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Update Sites - body - data table
filter	Filter	true	see Update Sites - body - filter table

Update Sites - body - data

Name	Description	Required	Value
description	The description for the Site	false	string
expiration	Expiration	false	string
inheritAccountExpiration	True, if expiration should be inherited from account	false	boolean
inherits	True if the policy is inherited from Account, False is not supported in bulk update	false	boolean
licenses	The licenses configuration for the sites	false	see Update Sites - body - licenses table
siteType	Site type	false	enum
unlimitedExpiration	Is expiration unlimited	false	boolean

Update Sites - body - licenses

Name	Description	Required	Value
bundles	The list of Bundles selected	false	see Update Sites - body - bundles table

Update Sites - body - bundles

Name	Description	Required	Value
name		true	string
majorVersion		false	integer
surfaces		false	see Update Sites - body - surfaces table

Update Sites - body - surfaces

Name	Description	Required	Value
------	-------------	----------	-------

name		true	string
count	The number of licenses per Surface. -1 indicates unlimited count.	false	integer

Update Sites - body - filter

Name	Description	Required	Value
accountId	Account id	false	string
accountIds	List of Account IDs to filter by	false	string []
accountName__contains	Free-text filter by account name (supports multiple values)	false	string []
activeLicenses	Active licenses	false	integer
adminOnly	[DEPRECATED] Show sites the user has Admin privileges to	false	boolean
availableMoveSites	Only return sites the user can move agents to	false	boolean
createdAt	Timestamp of site creation	false	string
description	The description for the Site	false	string
description__contains	Free-text filter by site description (supports multiple values)	false	string []
expiration	Expiration	false	string
externalId	Id in a CRM external system	false	string
features	If sent return only sites that support this features	false	string []
healthStatus	Health status	false	boolean
isDefault	Is default	false	boolean
module	Module	false	string
name	Name	false	string
name__contains	Free-text filter by site name (supports multiple values)	false	string []
query	Full text search for fields: name, account_name, description. (Note: on single-account consoles account name will not be matched)	false	string
registrationToken	Registration token	false	string

sitelds	List of Site IDs to filter by	false	string []
siteType	Site type	false	enum
sku	SKU	false	string
state	Site state	false	enum
states	List of states to filter	false	string []
statesNin	List of states to not filter	false	string []
suite	[DEPRECATED] Use sku instead	false	enum
totalLicenses	Total licenses	false	integer
updatedAt	Timestamp of last update	false	string

Get local upgrade/downgrade Site authorization

GET /web/api/v2.1/sites/{site_id}/local-authorization

Get the time when authorization of local upgrades/downgrades expires, and the number of Agents authorized for local upgrades/downgrades, in this Site.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get local upgrade/downgrade Site authorization - response - data table
errors	Errors	false	array

Get local upgrade/downgrade Site authorization - response - data

Name	Description	Required	Value
authorizedAgents	Authorized agents	false	integer
siteAuthorization	Site authorization	false	string

Edit local upgrade/downgrade Site authorization

PUT /web/api/v2.1/sites/{site_id}/local-authorization

Edit when authorization of local upgrades/downgrades expires. Returns the number of Agents authorized for local upgrades/downgrades, in this Site.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Edit local upgrade/downgrade Site authorization - response - data table
errors	Errors	false	array

Edit local upgrade/downgrade Site authorization - response - data

Name	Description	Required	Value
authorizedAgents	Authorized agents	false	integer

Body Schema

Name	Description	Required	Value
siteAuthorization	New expiration date for Site local upgrade/downgrade authorization	false	string

Get a CSV file of local upgrade/downgrade Site authorization data

GET /web/api/v2.1/sites/{site_id}/local-upgrade-approved-agents-csv

Get a CSV file containing the Agents authorized for local upgrades/downgrades, in this Site.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get a CSV file of local upgrade/downgrade Site authorization data - response - data table
errors	Errors	false	array

Get a CSV file of local upgrade/downgrade Site authorization data - response - data

Name	Description	Required	Value
authorizedAgents	Authorized agents	false	integer
siteAuthorization	Site authorization	false	string

System

System Info

GET /web/api/v2.1/system/info

Get the Console build, version, patch, and release information.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see System Info - response - data table
errors	Errors	false	array

System Info - response - data

Name	Description	Required	Value
build	Build	false	string
latestAgentVersion	Latest agent version	false	string
patch	Patch	false	string
release	Release	false	string
version	Version	false	string

System Status

GET /web/api/v2.1/system/status

Get an indication of the system's health status.

This command always returns a positive response when the Management Console and API server are up and running. In these cases, some features or capabilities might be impaired. This command does not require authentication.

Rate limit: 1 call per second for each IP address that communicates with the Console.

Response Messages

200 - Success

Response Schema

Name	Description	Required	Value
data	Response data	false	see System Status - response - data table
errors	Errors	false	array

System Status - response - data

Name	Description	Required	Value
health	System health indicator. Always returns "ok" when it is up and running	false	string

Database Status

GET /web/api/v2.1/system/status/db

[DEPRECATED] Works the same way as "System Status" endpoint.

This command does not require authentication.

Rate limit: 1 call per second for each IP address that communicates with the Console.

Response Messages

200 - Success

Response Schema

Name	Description	Required	Value
data	Response data	false	see Database Status - response - data table
errors	Errors	false	array

Database Status - response - data

Name	Description	Required	Value
health	System health indicator. Always returns "ok" when it is up and running	false	string

Cache Status

GET /web/api/v2.1/system/status/cache

[DEPRECATED] Works the same way as "System Status" endpoint.

This command does not require authentication.

Rate limit: 1 call per second for each IP address that communicates with the Console.

Response Messages

200 - Success

Response Schema

Name	Description	Required	Value
data	Response data	false	see Cache Status - response - data table
errors	Errors	false	array

Cache Status - response - data

Name	Description	Required	Value
health	System health indicator. Always returns "ok" when it is up and running	false	string

Get System Config

GET /web/api/v2.1/system/configuration

Get the configuration of your SentinelOne system.

The response shows basic information of the deployed SKUs and licenses, 2FA, and the Management URL.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get System Config - response - data table
errors	Errors	false	array

Get System Config - response - data

Name	Description	Required	Value
accessibleUrl	External DNS name of the management	false	string
advancedMode	True if advanced mode is enabled.	false	boolean
advancedModeAllowChanges	True if advanced mode value can be updated from this scope.	false	boolean
allowDuplicateSite	[DEPRECATED] Allow site admins to duplicate sites in their accounts	false	boolean
allowedDomains	list of allowed domains for user creation.	false	see Get System Config - response - allowedDomains table
cloudIntelligenceOn	[DEPRECATED] Cloud intelligence on	false	boolean
cloudLastConnectionTime	Cloud last connection time	false	string
earlyAccess	True if early access mode is enabled.	false	boolean
earlyAccessPlatforms	Early access platforms	false	string []
globalSalesforceId	salesforce id field of tenant	false	string
globalSharedConsole	shared console field of tenant	false	boolean
globalTwoFaEnabled	Global two fa enabled	false	boolean
licenses	List of available licenses	false	see Get System Config - response - licenses table
maxCompleteLicenses	[DEPRECATED] Complete Licenses	false	integer
maxControlLicenses	[DEPRECATED] Control licenses	false	integer
maxCoreLicenses	[DEPRECATED] Core licenses	false	integer
passwordExpiration	Time in days until a user password expires	false	integer
passwordExpirationRange	Password expiration range (read-only)	false	see Get System Config - response - passwordExpirationRange table
region	The region of the management	false	string
rememberMeLength	Time in minutes until a user session expires	false	integer
rememberMeLengthRange	Remember me length range	false	see Get System Config - response - rememberMeLengthRange table
scalyrUrl	The Scalyr URL that sends data to this Console.	false	string
tfaEnrollmentExpiration	2FA enrollment expiration period	false	integer

uiInactivityTimeoutSeconds	Length of UI inactivity period	false	integer
uiInactivityTimeoutSecondsRange	UI inactivity timeout range	false	see Get System Config - response - uiInactivityTimeoutSecondsRange table
unlimitedComplete	[DEPRECATED] True if Complete licenses is unlimited	false	boolean
unlimitedControl	[DEPRECATED] True if Control licenses is unlimited	false	boolean
unlimitedCore	[DEPRECATED] True if Core licenses is unlimited	false	boolean

Get System Config - response - allowedDomains

Name	Description	Required	Value
domain	Allowed domain name for user creation.	false	string
inherited	True if this is an inherited domain	false	boolean

Get System Config - response - licenses

Name	Description	Required	Value
bundles	The licenses Bundles	false	see Get System Config - response - bundles table
modules	The licenses Add-ons	false	see Get System Config - response - modules table
settings	The licenses Settings	false	see Get System Config - response - settings table

Get System Config - response - bundles

Name	Description	Required	Value
displayName	The Bundle display name	false	string
majorVersion	The Bundle major version	false	integer
minorVersion	The Bundle minor version	false	integer
name	The Bundle internal api name	false	string
surfaces	The Surfaces in the Bundle	false	see Get System Config - response - surfaces table
totalSurfaces	The total number of Surfaces in this	false	integer

	Bundle. -1 indicates unlimited count.		
--	---------------------------------------	--	--

Get System Config - response - surfaces

Name	Description	Required	Value
count	The Surface count. -1 indicates unlimited count	false	integer
name	The Surface name.	false	string

Get System Config - response - modules

Name	Description	Required	Value
displayName	The Add-on display name	false	string
majorVersion	The Add-on major version	false	integer
name	The Add-on internal api name	false	string

Get System Config - response - settings

Name	Description	Required	Value
displayName	[DEPRECATED] The Setting display name	false	string
groupName	The Setting group name	false	
setting	The Setting display name	false	
settingGroup	[DEPRECATED] The Setting group name	false	string
settingGroupDisplayName	The Setting group display name	false	string

Get System Config - response - passwordExpirationRange

Name	Description	Required	Value
max	Maximum time in days until a user	false	integer

	password expires		
min	Minimum time in days until a user password expires	false	integer

Get System Config - response - rememberMeLengthRange

Name	Description	Required	Value
max	Maximum time interval in minutes before the session expires	false	integer
min	Minimum time interval in minutes before the session expires	false	integer

Get System Config - response - uiInactivityTimeoutSecondsRange

Name	Description	Required	Value
max	Maximum ui inactivity time in seconds before the session expires	false	integer
min	Minimum ui inactivity time in seconds before the session expires	false	integer

Set System Config

PUT /web/api/v2.1/system/configuration

Change the system configuration.

Before you run this, see Get System Config.

This command requires a Global Admin user or Support.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Set System Config - response - data table
errors	Errors	false	array

Set System Config - response - data

Name	Description	Required	Value
accessibleUrl	External DNS name of the management	false	string
advancedMode	True if advanced mode is enabled.	false	boolean
advancedModeAllowChanges	True if advanced mode value can be updated from this scope.	false	boolean
allowDuplicateSite	[DEPRECATED] Allow site admins to duplicate sites in their accounts	false	boolean
allowedDomains	list of allowed domains for user creation.	false	see Set System Config - response - allowedDomains table
cloudIntelligenceOn	[DEPRECATED] Cloud intelligence on	false	boolean
cloudLastConnectionTime	Cloud last connection time	false	string
earlyAccess	True if early access mode is enabled.	false	boolean
earlyAccessPlatforms	Early access platforms	false	string []
globalSalesforceId	salesforce id field of tenant	false	string
globalSharedConsole	shared console field of tenant	false	boolean
globalTwoFaEnabled	Global two fa enabled	false	boolean
licenses	List of available licenses	false	see Set System Config - response - licenses table
maxCompleteLicenses	[DEPRECATED] Complete Licenses	false	integer
maxControlLicenses	[DEPRECATED] Control licenses	false	integer
maxCoreLicenses	[DEPRECATED] Core licenses	false	integer
passwordExpiration	Time in days until a user password expires	false	integer
passwordExpirationRange	Password expiration range (read-only)	false	see Set System Config - response - passwordExpirationRange table
region	The region of the management	false	string
rememberMeLength	Time in minutes until a user session expires	false	integer
rememberMeLengthRange	Remember me length range	false	see Set System Config - response - rememberMeLengthRange table
scalyrUrl	The Scalyr URL that sends data to this Console.	false	string
tfaEnrollmentExpiration	2FA enrollment expiration period	false	integer

uilnactivityTimeoutSeconds	Length of UI inactivity period	false	integer
uilnactivityTimeoutSecondsRange	UI inactivity timeout range	false	see Set System Config - response - uilnactivityTimeoutSecondsRange table
unlimitedComplete	[DEPRECATED] True if Complete licenses is unlimited	false	boolean
unlimitedControl	[DEPRECATED] True if Control licenses is unlimited	false	boolean
unlimitedCore	[DEPRECATED] True if Core licenses is unlimited	false	boolean

Set System Config - response - allowedDomains

Name	Description	Required	Value
domain	Allowed domain name for user creation.	false	string
inherited	True if this is an inherited domain	false	boolean

Set System Config - response - licenses

Name	Description	Required	Value
bundles	The licenses Bundles	false	see Set System Config - response - bundles table
modules	The licenses Add-ons	false	see Set System Config - response - modules table
settings	The licenses Settings	false	see Set System Config - response - settings table

Set System Config - response - bundles

Name	Description	Required	Value
displayName	The Bundle display name	false	string
majorVersion	The Bundle major version	false	integer
minorVersion	The Bundle minor version	false	integer
name	The Bundle internal api name	false	string
surfaces	The Surfaces in the Bundle	false	see Set System Config - response - surfaces table
totalSurfaces	The total number of Surfaces in this	false	integer

	Bundle. -1 indicates unlimited count.		
--	---------------------------------------	--	--

Set System Config - response - surfaces

Name	Description	Required	Value
count	The Surface count. -1 indicates unlimited count	false	integer
name	The Surface name.	false	string

Set System Config - response - modules

Name	Description	Required	Value
displayName	The Add-on display name	false	string
majorVersion	The Add-on major version	false	integer
name	The Add-on internal api name	false	string

Set System Config - response - settings

Name	Description	Required	Value
displayName	[DEPRECATED] The Setting display name	false	string
groupName	The Setting group name	false	
setting	The Setting display name	false	
settingGroup	[DEPRECATED] The Setting group name	false	string
settingGroupDisplayName	The Setting group display name	false	string

Set System Config - response - passwordExpirationRange

Name	Description	Required	Value
max	Maximum time in days until a user	false	integer

	password expires		
min	Minimum time in days until a user password expires	false	integer

Set System Config - response - rememberMeLengthRange

Name	Description	Required	Value
max	Maximum time interval in minutes before the session expires	false	integer
min	Minimum time interval in minutes before the session expires	false	integer

Set System Config - response - uiInactivityTimeoutSecondsRange

Name	Description	Required	Value
max	Maximum ui inactivity time in seconds before the session expires	false	integer
min	Minimum ui inactivity time in seconds before the session expires	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Set System Config - body - data table
filter	Filter section determines the configuration scope. Provide a site ID or leave empty for global configuration.	true	see Set System Config - body - filter table

Set System Config - body - data

Name	Description	Required	Value
accessibleUrl	External DNS name of the management	false	string
advancedMode	Advanced mode	false	boolean

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
siteIds	List of Site IDs to filter by	false	string []

System Environment

GET /web/api/v2.1/system/env

Get environment details of the system

Response Messages

200 - Success

Response Schema

Name	Description	Required	Value
data	Response data	false	see System Environment - response - data table
errors	Errors	false	array

System Environment - response - data

Name	Description	Required	Value
env	Env	false	string
isProd	Is prod	false	boolean
url	Url	false	string

Tag Manager

Create a new endpoint tag

POST /web/api/v2.1/tag-manager

Each tag must contain a type (endpoints) and key, Value is optional but recommended. A description is optional.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Create a new endpoint tag - response - data table
errors	Errors	false	array

Create a new endpoint tag - response - data

Name	Description	Required	Value
createdAt	Created at	false	string
createdByld	A reference to the user which created the tag	false	string
description	Description	false	string
id	Tag ID	false	string
key	Key	false	string
scopeId	An ID reference to the containing scope	false	string
scopeLevel	Name of scope	false	string
type	e.g: manual-tagging	false	string
updatedAt	Updated at	false	string
updatedByld	A reference to the user which updated the tag	false	string
value	Value	false	string

Body Schema

Name	Description	Required	Value
filter	Filter	true	see Create a new endpoint tag - body - filter table
data	Data	false	see Create a new endpoint tag - body - data table

Create a new endpoint tag - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
groupIds	List of Group IDs to filter by	false	string []
siteIds	List of Site IDs to filter by	false	string []
tenant	Indicates a tenant scope request	false	boolean

Create a new endpoint tag - body - data

Name	Description	Required	Value
key	Key	true	string
type	Type	true	string
value	Value	true	string
description	Description	false	string

Delete tags

DELETE /web/api/v2.1/tag-manager

Delete all tags that match the filters.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
------	-------------	----------	-------

data	Response data	false	see Delete tags - response - data table
errors	Errors	false	array

Delete tags - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
filter	Filter	true	see Delete tags - body - filter table

Delete tags - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
groupIds	List of Group IDs to filter by	false	string []
includeChildren	Return tags from children scope levels	false	boolean
includeParents	Return tags from parent scope levels	false	boolean
query	Free text search on fields key, value, description	false	string
siteIds	List of Site IDs to filter by	false	string []
tagIds	List of tag IDs	false	string []
tagIdsExcluded	List of tag IDs to exclude	false	string []
tenant	Indicates a tenant scope request	false	boolean

Edit an existing tag

PUT /web/api/v2.1/tag-manager/{tag_id}

Change the key, value, or description of a tag.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Edit an existing tag - response - data table
errors	Errors	false	array

Edit an existing tag - response - data

Name	Description	Required	Value
createdAt	Created at	false	string
createdById	A reference to the user which created the tag	false	string
description	Description	false	string
id	Tag ID	false	string
key	Key	false	string
scopeId	An ID reference to the containing scope	false	string
scopeLevel	Name of scope	false	string
type	e.g: manual-tagging	false	string

Edit an existing tag - body - data

Name	Description	Required	Value
description	Description	false	string
key	Key	false	string
value	Value	false	string

Tags

Get Tags

GET /web/api/v2.1/tags

Get tags.

Parameters

type	required	Type in. Example: "firewall".
accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
disablepagination	optional	If true, all tags for requested filters will be returned
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
ids	optional	List of IDs to filter by. Example: "225494730938493804,225494730938493915".
kind	optional	Returns tags of this specific kind
limit	optional	Limit number of returned items (1-1000). Example: "10".

name__contains	optional	Free-text filter by tag name. Example: "tag_name,tag_na".
onlyparents	optional	If true returns all tags possible to inherit from parent scopes, otherwise returns all tags already inherited and tags from this scope.
query	optional	Free text search on tag name
scope	optional	Return tags from given scope level. Example: "account".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
tenant	optional	Indicates a tenant scope request

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Tags - response - pagination table
data	Response data	false	see Get Tags - response - data table
errors	Errors	false	array

Get Tags - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Tags - response - data

Name	Description	Required	Value
type	Type	true	enum
affectedScopes	Affected scopes	false	integer
createdAt	Timestamp of site creation	false	string
creator	Location creator name	false	string
creatorId	Location creator ID	false	string
description	Description	false	string
id	Id	false	string
kind	Kind is a MGMT side indication to categorize special tags like `vulnerability`	false	string
linkedRules	Linked rules	false	integer
name	Name	false	string
scope	Scope	false	enum
scopeId	Scope id	false	string
scopeName	Scope name	false	string
updatedAt	Timestamp of last update	false	string
updater	Location updater name	false	string
updaterId	Location updater	false	string

Create Tags

POST /web/api/v2.1/tags

Add tags to create user-defined logical groups.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Create Tags - response - data table
errors	Errors	false	array

Create Tags - response - data

Name	Description	Required	Value
type	Type	true	enum

Tasks

Get Task Configuration

GET /web/api/v2.1/tasks-configuration

Get the task configuration of a scope.

Parameters

tasktype	required	Task type. Example: "agents_upgrade".
accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000

		items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
tenant	optional	Indicates a tenant scope request

byWeekday	Days of week: 0=Sun..6=Sat	false	integer []
effectiveEndOn	Rule effective end date in ISO format	false	string
effectiveStartOn	Rule effective start date in ISO format	false	string
frequency	Rule frequency (required for custom policy)	false	enum
interval	Repeat every N intervals	false	integer
timeWindows	Time windows for this rule	false	see Update Task Configuration (Flexible MW) - body - timeWindows table

Update Task Configuration (Flexible MW) - body - absolute

Name	Description	Required	Value
endAt	End datetime in YYYY-MM-DDTHH:MM format	true	string
startAt	Start datetime in YYYY-MM-DDTHH:MM format	true	string

Update Task Configuration (Flexible MW) - body - timeWindows

Name	Description	Required	Value
end	End time in HH:MM (24h) or HH:MM am/pm (12h) format	true	string
start	Start time in HH:MM (24h) or HH:MM am/pm (12h) format	true	string

Update Task Configuration (Flexible MW) - body - filter

Name	Description	Required	Value
------	-------------	----------	-------

taskType	Defines task's type and priority	true	enum
accountIds	List of Account IDs to filter by	false	string []
groupIds	List of Group IDs to filter by	false	string []
siteIds	List of Site IDs to filter by	false	string []
tenant	Indicates a tenant scope request	false	boolean

Has Child Scopes

GET /web/api/v2.1/tasks-configuration/has-explicit-subscope

From a given scope, see if there are scopes under it that have local, explicit tasks. The response returns True if a sub-scope has a local (not inherited) task configuration.

Parameters

tasktype	required	Task type. Example: "agents_upgrade".
accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
tenant	optional	Indicates a tenant scope request

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User is not allowed in this scope

404 - Configuration not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Has Child Scopes - response - data table
errors	Errors	false	array

Has Child Scopes - response - data

Name	Description	Required	Value
flag	Returns boolean value for the request	false	boolean

Get Child Scope Task Configuration

GET /web/api/v2.1/tasks-configuration/explicit-subscopes

Get the task configuration of child scopes of the given scope, if the tasks are not inherited.

Parameters

tasktype	required	Task type. Example: "agents_upgrade".
accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".
query	optional	Query
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
tenant	optional	Indicates a tenant scope request

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - User is not allowed in this scope

404 - Configuration not found

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Child Scope Task Configuration - response - pagination table
data	Response data	false	see Get Child Scope Task Configuration - response - data table
errors	Errors	false	array

Get Child Scope Task Configuration - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Child Scope Task Configuration - response - data

Name	Description	Required	Value
accountId	Account id	false	string
accountName	Account name	false	string
groupId	Group id	false	string
groupName	Group name	false	string
siteId	Site id	false	string
siteName	Site name	false	string

Export Maintenance Windows as CSV

GET /web/api/v2.1/tasks-configuration/maintenance-windows/export

Export all maintenance window occurrences for a specific scope as CSV. Only supports flexible (policy_payload) maintenance window format. Date range: policies with end dates generate up to that date; policies with no end date generate for 5 years from start date. Returns a CSV file with columns: Date, Start Time, End Time. Maximum report size: 5MB.

Parameters

tasktype	required	Task type. Example: "agents_upgrade".
accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
groupids	optional	List of Group IDs to filter by. Example:

		"225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
tenant	optional	Indicates a tenant scope request

Response Messages

200 - CSV file with maintenance windows

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

404 - Configuration not found

500 - Report exceeds maximum size

Threat Intelligence

Get IOCs

GET /web/api/v2.1/threat-intelligence/iocs

Get the IOCs of a specified Account that match the filter.

Note: Using creationTime to sort results has been deprecated and should not be used. In the future, the ability to sort by creationTime will be removed. Please sort by uploadTime or updatedAt as an alternative.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "4,2,6,4,1,8,0,3,0,2,1,2,0,7,3,7,6,2".
batchid	optional	Unique ID of the uploaded indicators batch. Example: "atmtn000000028a881bcf939dc6d92ab55443".
campaignnames__in	optional	List of campaign names associated with the indicator.

category__in	optional	The categories of the Threat Intelligence indicator, e.g. the malware type associated with the IOC
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
creationtime__gt	optional	Creation Time as set by the user greater than. Example: "2021-07-12T20:33:29.007906Z".
creationtime__gte	optional	Creation Time as set by the user greater or equal than. Example: "2021-07-13T20:33:29.007906Z".
creationtime__lt	optional	Creation Time as set by the user lesser than. Example: "2021-07-13T20:33:29.007906Z".
creationtime__lte	optional	Creation Time as set by the user lesser or equal than. Example: "2021-07-11T20:33:29.007906Z".
creator__contains	optional	Free-text filter by the user uploaded the Threat Intelligence indicator (supports multiple values). Example: "admin@sentinelone.com".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
description__contains	optional	Free-text filter by the description of the indicator (supports multiple values). Example: "Malicious-activity".
externalid	optional	The unique identifier of the indicator as provided by the Threat Intelligence source. Example: "e277603e-1060-5ad4-9937-c26c97f1ca68".
labels__in	optional	List of labels associated with the indicator.
limit	optional	Limit number of returned items (1-1000). Example: "10".
malwarenames__in	optional	A list of malware names to filter by.
name__contains	optional	Free-text filter by the Indicator name (supports multiple values). Example: "foo.dll".
severity	optional	A list of severities to filter by (0-7)
siteids	optional	List of Site IDs to filter by. Example: "4,2,6,4,1,8,0,3,0,2,1,2,0,7,3,7,6,2".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.

sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
source	optional	List of the sources of the identified Threat Intelligence indicator. Example: "AlienVault".
tenant	optional	Indicates a tenant scope request
threatactors__in	optional	A list of threat actors to filter by
threatactortypes__in	optional	List of threat actor types associated with the indicator.
type	optional	The type of the Threat Intelligence indicator. Example: "IPv4".
updatedat__gt	optional	The time at which the indicator was last updated in SentinelOne DB greater than. Example: "2021-07-13T20:33:29.007906Z".
updatedat__gte	optional	The time at which the indicator was last updated in SentinelOne DB greater or equal than. Example: "2021-07-13T20:33:29.007906Z".
updatedat__lt	optional	The time at which the indicator was last updated in SentinelOne DB lesser than. Example: "2021-07-13T20:33:29.007906Z".
updatedat__lte	optional	The time at which the indicator was last updated in SentinelOne DB lesser or equal than. Example: "2021-07-13T20:33:29.007906Z".
uploadtime__gt	optional	The time at which the Threat Intelligence indicator was uploaded to SentinelOne DB greater than. Example: "2022-07-13T20:33:29.007906Z".
uploadtime__gte	optional	The time at which the Threat Intelligence indicator was uploaded to SentinelOne DB greater or equal than. Example: "2022-07-13T20:33:29.007906Z".
uploadtime__lt	optional	The time at which the Threat Intelligence indicator was uploaded to SentinelOne DB lesser than. Example: "2021-07-13T20:33:29.007906Z".
uploadtime__lte	optional	The time at which the Threat Intelligence indicator was uploaded to SentinelOne DB lesser or equal than. Example: "2022-07-13T20:33:29.007906Z".
uuids	optional	A list of unique Ids of the parent process of the indicator of compromise. Example: "2,c,f,f,a,e,8,7,1,1,9,7,f,2,0,d,8,6,4,f,e,8,3,6,3,e,e,e,6,6,5,1".
value	optional	The value of the Threat Intelligence indicator. Example: "175.45.176.1".

uuid	Unique Id of the Threat Intelligence indicator	false	string
validUntil	The date from which the indicator will no longer be monitored	false	string

Create IOCs

POST /web/api/v2.1/threat-intelligence/iocs

Add an IoC to the Threat Intelligence database.

These values under data are required fields: "source", "type", "value", and "method".

"Type" and "method" must be in upper case.

The "validUntil" field is mandatory, and must contain a date, for example, 2021-03-20 09:14:47.779000. "validUntil" determines when the IOC expires.

If the expiration date ("validUntil") is left blank, by default it will be the upload date plus a default offset value:

- 14 days for IPs
- 90 days for URLs and domains
- 180 days for file hashes (SHA1, SHA256, and MD5)

The maximum offset values allowed are:

- 30 days for IPs
- 180 days for URLs and Domains
- 180 days for hashes (SHA1, SHA256, and MD5)

The upload date is when the API gets a request to create an IOC.

If the expiration date is later than the upload date plus the the maximum offset value allowed, it will be adjusted to the upload date plus the maximum offset value allowed.

Create IOCs from STIX bundle

POST /web/api/v2.1/threat-intelligence/iocs/stix

Add IOCs to the Threat Intelligence database from a STIX 2.1 bundle. The API will transform STIX indicators into Threat Intelligence IOCs.

Must be a valid STIX 2.1 bundle containing indicator objects

Each indicator object should have a valid STIX pattern for one of these types:

-File hashes: [file:hashes.MD5 = ...], [file:hashes.SHA-1 = ...], [file:hashes.SHA-256 = ...]

-IP addresses: [ipv4-addr:value = ...]

-Domains: [domain-name:value = ...]

-URLs: [url:value = ...]

If the expiration date ("validUntil") is left blank, by default it will be the upload date plus a default offset value:

- 14 days for IPs

- 90 days for URLs and domains

- 180 days for file hashes (SHA1, SHA256, and MD5)

The maximum offset values allowed are:

- 30 days for IPs

- 180 days for URLs and Domains

- 180 days for hashes (SHA1, SHA256, and MD5)

The upload date is when the API gets a request to create an IOC.

If the expiration date is later than the upload date plus the the maximum offset value allowed, it will be adjusted to the upload date plus the maximum offset value allowed.

The API will also process these optional STIX relationships if present:

-Threat Actors (names and types)

-Malware names

-Campaign names

-Intrusion Sets

Other stix objects, or indicators with unsupported stix pattern, will be ignored.

Get Threat Intelligence user config

GET /web/api/v2.1/threat-intelligence/user-config

Get the Threat Intelligence user config that match the filter.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "4,2,6,4,1,8,0,3,0,2,1,2,0,7,3,7,6,2".
siteids	optional	List of Site IDs to filter by. Example: "4,2,6,4,1,8,0,3,0,2,1,2,0,7,3,7,6,2".
tenant	optional	Indicates a tenant scope request

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Get Threat Intelligence user config - response - data table
errors	Errors	false	array

Get Threat Intelligence user config - response - data

Name	Description	Required	Value
createdAt	The time at which the user config was created in SentinelOne DB	true	string
updatedAt	The time at which the user config was last updated in SentinelOne DB	true	string
description	User defined description of the user config.	false	string
disableRh	The flag to disable Threat Intelligence RetroHunt feature.	false	boolean
disableThreat	The flag to disable Threat Intelligence Indicator based Threat creation for the entire account.	false	boolean
enableXdrMatching	The flag to enable XDR matching feature.	false	boolean
excludeTii	Exclude tii	false	string []
scopeId	The group/site/account id depending on the scope_level.	false	string
scopeLevel	Scope level of the user config	false	enum
threatExcludeFields	Threat exclude fields	false	string []
threatMinScore	The minimum score for a threat to be created.	false	integer

Create Threat Intelligence user config

POST /web/api/v2.1/threat-intelligence/user-config

Create Threat Intelligence user config.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Create Threat Intelligence user config - response - data table
errors	Errors	false	array

Create Threat Intelligence user config - response - data

Name	Description	Required	Value
createdAt	The time at which the user config was created in SentinelOne DB	true	string
updatedAt	The time at which the user config was last updated in SentinelOne DB	true	string
description	User defined description of the user config.	false	string
disableRh	The flag to disable Threat Intelligence RetroHunt feature.	false	boolean
disableThreat	The flag to disable Threat Intelligence Indicator based Threat creation for the entire account.	false	boolean
enableXdrMatching	The flag to enable XDR matching feature.	false	boolean
excludeTii	Exclude tii	false	string []
scopeld	The group/site/account id depending on the scope_level.	false	string
scopeLevel	Scope level of the user config	false	enum
threatExcludeFields	Threat exclude fields	false	string []
threatMinScore	The minimum score for a threat to be created.	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Create Threat Intelligence user config - body - data table
filter	Filter	true	see Create Threat Intelligence user config - body - filter table

Create Threat Intelligence user config - body - data

Name	Description	Required	Value
description	User defined description of the user config.	false	string
disableRh	The flag to disable Threat Intelligence RetroHunt feature.	false	boolean
disableThreat	The flag to disable Threat Intelligence Indicator based Threat creation for the entire account.	false	boolean
enableXdrMatching	The flag to enable XDR matching feature.	false	boolean
excludeTii	Exclude tii	false	string []
threatExcludeFields	Threat exclude fields	false	string []
threatMinScore	The minimum score for a threat to be created.	false	integer

Create Threat Intelligence user config - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
groupIds	List of Group IDs to filter by	false	string []
siteIds	List of Site IDs to filter by	false	string []
tenant	Indicates a tenant scope request	false	boolean

Delete Threat Intelligence user config

DELETE /web/api/v2.1/threat-intelligence/user-config

Delete Threat Intelligence user config that match the filter.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Delete Threat Intelligence user config - response - data table
errors	Errors	false	array

Delete Threat Intelligence user config - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
siteIds	List of Site IDs to filter by	false	string []
tenant	Indicates a tenant scope request	false	boolean

Threat Notes

Get Threat Notes

GET /web/api/v2.1/threats/{threat_id}/notes

Get the threat notes that match the filter.

Parameters

countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
creator__like	optional	Threat Note creator name (partially or full). Example: "John".
creatorid	optional	Threat Note creator ID. Example: "225494730938493804".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
limit	optional	Limit number of returned items (1-1000). Example: "10".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Threat Notes - response - pagination table
data	Response data	false	see Get Threat Notes - response - data table
errors	Errors	false	array

Get Threat Notes - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Threat Notes - response - data

Name	Description	Required	Value
createdAt	Timestamp of date creation	false	string
creator	Threat Note creator name	false	string
creatorId	Threat Note creator id	false	string
edited	Identify if the the note changed	false	boolean
id	Threat Note ID	false	string
text	Threat Note text	false	string
updatedAt	Timestamp of last update	false	string

Add Note to Multiple

POST /web/api/v2.1/threats/notes

Add a threat note to multiple threats.

Response Messages

200 - Threats note successfully created

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Add Note to Multiple - response - data table
errors	Errors	false	array

Add Note to Multiple - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer
details	Result details for each threat	false	see Add Note to Multiple - response - details table

Add Note to Multiple - response - details

Name	Description	Required	Value
threatId	Threat id	false	string

Body Schema

Name	Description	Required	Value
data	Data	true	see Add Note to Multiple - body - data table
filter	Filter	true	see Add Note to Multiple - body - filter table

Add Note to Multiple - body - data

Name	Description	Required	Value
text	Threat Note text	true	string

Add Note to Multiple - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
agentIds	List of Agent IDs	false	string []
agentIsActive	Include Agents currently connected to the Management Console	false	boolean
agentMachineTypes	Include Agent machine types	false	string []
agentMachineTypesNin	Excluded Agent machine types	false	string []
agentTagsData	Filter threats by assigned tags to the related agent. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
agentVersions	Include Agent versions	false	string []
agentVersionsNin	Excluded Agent versions	false	string []
analystVerdicts	Filter threats by a specific analyst verdict	false	string []
analystVerdictsNin	Exclude threats with specific analyst verdicts	false	string []
awsRole__contains	Free-text filter by aws role(supports multiple values)	false	string []
awsSecurityGroups__contains	Free-text filter by aws securityGroups(supports multiple values)	false	string []
awsSubnetIds__contains	Free-text filter by aws subnet ids (supports multiple values)	false	string []

azureResourceGroup__contains	Free-text filter by azure resource group(supports multiple values)	false	string []
classifications	List of threat classifications to search	false	string []
classificationsNin	List of threat classifications not to search	false	string []
classificationSources	Classification sources list	false	string []
classificationSourcesNin	Classification sources list to exclude	false	string []
cloudAccount__contains	Free-text filter by cloud account (supports multiple values)	false	string []
cloudImage__contains	Free-text filter by cloud image (supports multiple values)	false	string []
cloudInstanceId__contains	Free-text filter by cloud instance id(supports multiple values)	false	string []
cloudInstanceSize__contains	Free-text filter by cloud instance size(supports multiple values)	false	string []
cloudLocation__contains	Free-text filter by cloud location (supports multiple values)	false	string []
cloudNetwork__contains	Free-text filter by cloud network (supports multiple values)	false	string []
cloudProvider	Agents from which cloud provider	false	string []
cloudProviderNin	Exclude Agents from these cloud provider	false	string []
collectionIds	List of collection IDs to search	false	string []
commandLineArguments__contains	Free-text filter by threat command line arguments (supports multiple values)	false	string []
computerName__contains	Free-text filter by computer name (supports multiple values)	false	string []
confidenceLevels	Filter threats by a specific confidence level	false	string []
confidenceLevelsNin	Exclude threats with specific confidence level	false	string []
containerImageName__contains	Free-text filter by the endpoint container image name (supports multiple values)	false	string []
containerLabels__contains	Free-text filter by the endpoint container labels (supports multiple values)	false	string []

containerName__contains	Free-text filter by the endpoint container name (supports multiple values)	false	string []
contentHash__contains	Free-text filter by file content hash (supports multiple values)	false	string []
contentHashes	List of sha1 hashes to search for	false	string []
countsFor	comma-separated list of fields to be shown	false	string
createdAt__gt	Created at greater than.	false	string
createdAt__gte	Created at greater or equal than.	false	string
createdAt__lt	Created at lesser than.	false	string
createdAt__lte	Created at lesser or equal than.	false	string
detectionAgentDomain__contains	Free-text filter by Agent domain at detection time (supports multiple values)	false	string []
detectionAgentVersion__contains	Free-text filter by Agent version at detection time (supports multiple values)	false	string []
detectionEngines	Included engines	false	string []
detectionEnginesNin	Excluded engines	false	string []
displayName	Display name	false	string
engines	Included engines	false	string []
enginesNin	Excluded engines	false	string []
externalTicketExists	The threat contains ticket number	false	boolean
externalTicketId__contains	Free-text filter by the threat external ticket ID (supports multiple values)	false	string []
externalTicketIds	External ticket ID for the threat	false	string []
failedActions	At least one action failed on the threat	false	boolean
filePath__contains	Free-text filter by file path (supports multiple values)	false	string []
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of Group IDs to filter by	false	string []
hasAgentTags	Include only Threats whose Agent is assigned any tags if True, or none if	false	boolean

	False		
ids	List of threat IDs	false	string []
incidentStatuses	Filter threats by a specific incident status	false	string []
incidentStatusesNin	Exclude threats with specific incident statuses	false	string []
initiatedBy	Only include threats from specific initiating sources	false	string []
initiatedByNin	Exclude threats with specific initiating sources	false	string []
initiatedByUsername__contains	Free-text filter by the username that initiated that threat (supports multiple values)	false	string []
k8sClusterName__contains	Free-text filter by the endpoint Kubernetes cluster name (supports multiple values)	false	string []
k8sControllerLabels__contains	Free-text filter by the endpoint Kubernetes controller labels (supports multiple values)	false	string []
k8sControllerName__contains	Free-text filter by the endpoint Kubernetes controller name (supports multiple values)	false	string []
k8sNamespaceLabels__contains	Free-text filter by the endpoint Kubernetes namespace labels (supports multiple values)	false	string []
k8sNamespaceName__contains	Free-text filter by the endpoint Kubernetes namespace name (supports multiple values)	false	string []
k8sNodeLabels__contains	Free-text filter by the endpoint Kubernetes node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by the endpoint Kubernetes node name (supports multiple values)	false	string []
k8sPodLabels__contains	Free-text filter by the endpoint Kubernetes pod labels (supports multiple values)	false	string []
k8sPodName__contains	Free-text filter by the endpoint Kubernetes pod name (supports multiple values)	false	string []

limit	Limit	false	integer
mitigatedPreemptively	If the threat was detected pre-execution or post-execution	false	boolean
mitigationStatuses	Filter threats by a specific status	false	string []
mitigationStatusesNin	Filter threats not by a specific status	false	string []
noteExists	The threat contains at least one note	false	boolean
originatedProcess__contains	Free-text filter by the originated process name of the threat (supports multiple values)	false	string []
osArchs	Included OS Architectures	false	string []
osNames		false	string []
osNamesNin		false	string []
osTypes	Included OS types	false	string []
osTypesNin	Excluded OS types	false	string []
pendingActions	At least one action is pending for the Agent for the threat	false	boolean
publisherName__contains	Free-text filter by threat's publisher name (supports multiple values)	false	string []
query	Full text search for fields: threat_details, content_hash, computer_name, file_path, uuid, detection_agent_version, realtime_agent_version, detection_agent_domain, command_line_arguments, initiated_by_username, storyline, originated_process, k8s_cluster_name, k8s_node_name, k8s_node_labels, k8s_namespace_name, k8s_namespace_labels, k8s_controller_name, k8s_controller_labels, k8s_pod_name, k8s_pod_labels, container_name, container_image_name, container_labels, external_ticket_id	false	string
realtimeAgentVersion__contains	Free-text filter by Agent version at current time (supports multiple values)	false	string []
rebootRequired	A reboot is required on any endpoint	false	boolean

	for at least one action on the threat		
resolved	This is used for backward-compatibility with API 2.0.	false	boolean
signerIdentity__contains	Free-text filter by threat's signer identity (certificate ID) (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storyline__contains	Free-text filter by threat storyline (supports multiple values)	false	string []
storylines	List of Agent context to search for	false	string []
tenant	Indicates a tenant scope request	false	boolean
threatDetails__contains	Free-text filter by threat details(supports multiple values)	false	string []
updatedAt__gt	Updated at greater than.	false	string
updatedAt__gte	Updated at greater or equal than.	false	string
updatedAt__lt	Updated at lesser than.	false	string
updatedAt__lte	Updated at lesser or equal than.	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []

Update Threat Note

PUT /web/api/v2.1/threats/{threat_id}/notes/{note_id}

Change the text of a threat note.

Response Messages

200 - Threat note successfully updated

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

errors	Errors	false	array

Delete Threat Note - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Threats

Get Threats

GET /web/api/v2.1/threats

Get data of threats that match the filter.
Best Practice: Use the filters. Each threat gives a number of data lines that will quickly fill the page limit.

BEST PRACTICE

Use the filters. Each threat gives a number of data lines that will quickly fill the page limit.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
agentids	optional	List of Agent IDs. Example: "225494730938493804,225494730938493915".
agentisactive	optional	Include Agents currently connected to the Management Console
agentmachinetypes	optional	Include Agent machine types. Example: "unknown".
agentmachinetypesnin	optional	Excluded Agent machine types. Example: "unknown".
agenttagsdata	optional	Filter threats by assigned tags to the related agent. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key. Example: {"key1": ["value1_1", "value1_2"], "key2__nin": ["value2"]}
agentversions	optional	Include Agent versions. Example: "2.5.1.1320".

agentversionsnin	optional	Excluded Agent versions. Example: "2.5.1.1320".
analystverdicts	optional	Filter threats by a specific analyst verdict. Example: "true_positive,suspicious".
analystverdictsnin	optional	Exclude threats with specific analyst verdicts. Example: "true_positive,suspicious".
awsrole__contains	optional	Free-text filter by aws role(supports multiple values)
awssecuritygroups__contains	optional	Free-text filter by aws securityGroups(supports multiple values)
awssubnetids__contains	optional	Free-text filter by aws subnet ids (supports multiple values)
azureresourcegroup__contains	optional	Free-text filter by azure resource group(supports multiple values)
classifications	optional	List of threat classifications to search
classificationsnin	optional	List of threat classifications not to search
classificationsources	optional	Classification sources list. Example: "Cloud".
classificationsourcesnin	optional	Classification sources list to exclude. Example: "Cloud".
cloudaccount__contains	optional	Free-text filter by cloud account (supports multiple values)
cloudimage__contains	optional	Free-text filter by cloud image (supports multiple values)
cloudinstanceid__contains	optional	Free-text filter by cloud instance id(supports multiple values)
cloudinstancesize__contains	optional	Free-text filter by cloud instance size(supports multiple values)
cloudlocation__contains	optional	Free-text filter by cloud location (supports multiple values)
cloudnetwork__contains	optional	Free-text filter by cloud network (supports multiple values)
cloudprovider	optional	Agents from which cloud provider
cloudprovidernin	optional	Exclude Agents from these cloud provider
collectionids	optional	List of collection IDs to search. Example: "225494730938493804,225494730938493915".
commandlinearguments__contains	optional	Free-text filter by threat command line arguments (supports multiple values). Example: "/usr/sbin/,wget".

computername__contains	optional	Free-text filter by computer name (supports multiple values). Example: "john-office,WIN".
confidencelevels	optional	Filter threats by a specific confidence level. Example: "malicious".
confidencelevelsnin	optional	Exclude threats with specific confidence level. Example: "malicious".
containerimage__contains	optional	Free-text filter by the endpoint container image name (supports multiple values)
containerlabels__contains	optional	Free-text filter by the endpoint container labels (supports multiple values)
containername__contains	optional	Free-text filter by the endpoint container name (supports multiple values)
contenthash__contains	optional	Free-text filter by file content hash (supports multiple values). Example: "5f09bcff3".
contenthashes	optional	List of sha1 hashes to search for. Example: "d,d,d,5,0,3,0,a,3,d,0,2,9,f,3,8,4,5,f,c,1,0,5,2,4,1,9,8,2,9,f,0,8,f,3,1,2,2,4,0".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
countsfor	optional	comma-separated list of fields to be shown. Example: "osTypes,machineTypes".
createdat__gt	optional	Created at greater than. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Created at greater or equal than. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Created at lesser than. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Created at lesser or equal than. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
detectionagentdomain__contains	optional	Free-text filter by Agent domain at detection time (supports multiple values). Example: "sentinel,sentinelone.com".
detectionagentversion__contains	optional	Free-text filter by Agent version at detection time (supports multiple values). Example: "1.1.1.1,2.2".
detectionengines	optional	Included engines. Example: "reputation".

detectionenginesnin	optional	Excluded engines. Example: "reputation".
displayname	optional	Display name
engines	optional	Included engines. Example: "reputation".
enginesnin	optional	Excluded engines. Example: "reputation".
externalticketexists	optional	The threat contains ticket number
externalticketid__contains	optional	Free-text filter by the threat external ticket ID (supports multiple values)
externalticketids	optional	External ticket ID for the threat
failedactions	optional	At least one action failed on the threat
filepath__contains	optional	Free-text filter by file path (supports multiple values). Example: "\\MyUser\\Downloads".
gcpserviceaccount__contains	optional	Free-text filter by gcp service account (supports multiple values)
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
hasagenttags	optional	Include only Threats whose Agent is assigned any tags if True, or none if False
ids	optional	List of threat IDs. Example: "225494730938493804,225494730938493915".
incidentstatuses	optional	Filter threats by a specific incident status. Example: "unresolved,in_progress".
incidentstatusesnin	optional	Exclude threats with specific incident statuses. Example: "unresolved,in_progress".
initiatedby	optional	Only include threats from specific initiating sources. Example: "agent_policy,dv_command".
initiatedbynin	optional	Exclude threats with specific initiating sources. Example: "agent_policy,dv_command".
initiatedbyusername__contains	optional	Free-text filter by the username that initiated that threat (supports multiple values). Example: "John,John Doe".
k8sclustername__contains	optional	Free-text filter by the endpoint Kubernetes cluster name (supports multiple values)
k8scontrollerlabels__contains	optional	Free-text filter by the endpoint Kubernetes controller labels (supports multiple values)
k8scontrollername__contains	optional	Free-text filter by the endpoint Kubernetes controller name

contains		(supports multiple values)
k8snamespacelabels__contains	optional	Free-text filter by the endpoint Kubernetes namespace labels (supports multiple values)
k8snamespace__contains	optional	Free-text filter by the endpoint Kubernetes namespace name (supports multiple values)
k8snode__contains	optional	Free-text filter by the endpoint Kubernetes node labels (supports multiple values)
k8snode__contains	optional	Free-text filter by the endpoint Kubernetes node name (supports multiple values)
k8spodlabels__contains	optional	Free-text filter by the endpoint Kubernetes pod labels (supports multiple values)
k8spod__contains	optional	Free-text filter by the endpoint Kubernetes pod name (supports multiple values)
limit	optional	Limit number of returned items (1-1000). Example: "10".
mitigatedpreemptively	optional	If the threat was detected pre-execution or post-execution
mitigationstatuses	optional	Filter threats by a specific status. Example: "not_mitigated".
mitigationstatusesnin	optional	Filter threats not by a specific status. Example: "not_mitigated".
noteexists	optional	The threat contains at least one note
originatedprocess__contains	optional	Free-text filter by the originated process name of the threat (supports multiple values)
osarchs	optional	Included OS Architectures. Example: "32 bit".
osnames	optional	
osnamesnin	optional	
ostypes	optional	Included OS types. Example: "linux".
ostypesnin	optional	Excluded OS types. Example: "linux".
pendingactions	optional	At least one action is pending for the Agent for the threat
publishername__contains	optional	Free-text filter by threat's publisher name (supports multiple values). Example: "GOOGLE,Apple Inc.".
query	optional	Full text search for fields: threat_details, content_hash, computer_name, file_path, uuid, detection_agent_version, realtime_agent_version, detection_agent_domain, command_line_arguments, initiated_by_username, storyline, originated_process, k8s_cluster_name, k8s_node_name,

		k8s_node_labels, k8s_namespace_name, k8s_namespace_labels, k8s_controller_name, k8s_controller_labels, k8s_pod_name, k8s_pod_labels, container_name, container_image_name, container_labels, external_ticket_id
realtimeagentversion__contains	optional	Free-text filter by Agent version at current time (supports multiple values). Example: "1.1.1.1,2.2."
rebootrequired	optional	A reboot is required on any endpoint for at least one action on the threat
resolved	optional	This is used for backward-compatibility with API 2.0.
signeridentity__contains	optional	Free-text filter by threat's signer identity (certificate ID) (supports multiple values). Example: "3BDA323E552DB1FDC0A9DD871E8CADD2FCBB419".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
storyline__contains	optional	Free-text filter by threat storyline (supports multiple values). Example: "0000C2E97648,0006FC73-77B4-470F-AAC7-".
storylines	optional	List of Agent context to search for
tenant	optional	Indicates a tenant scope request
threatdetails__contains	optional	Free-text filter by threat details(supports multiple values). Example: "malware.exe,virus.exe".
updatedat__gt	optional	Updated at greater than. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Updated at greater or equal than. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Updated at lesser than. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Updated at lesser or equal than. Example: "2018-02-27T04:49:26.257525Z".
uuid__contains	optional	Free-text filter by Agent UUID (supports multiple values). Example:

		"e92-01928,b055".

md5	Md5	false	string
mitigatedPreemptively	True is the threat was blocked before execution	false	boolean
mitigationStatus	Mitigation status	false	enum
mitigationStatusDescription	Mitigation status description	false	
originatorProcess	Originator process	false	string
pendingActions	At least one action is pending on the threat	false	boolean
processUser	Process user	false	string
publisherName	Certificate publisher	false	string
reachedEventsLimit	Has number of OS events for this threat reached the limit, resulting in a partial attack storyline	false	boolean
rebootRequired	A reboot is required on the endpoint for at least one action on the threat	false	boolean
rootProcessUpn	Root process UPN	false	string
sha256	SHA256 hash of file content	false	string
storyline	Storyline identifier from agent	false	string
threatId	Threat id	false	string
threatName	Threat name	false	string
updatedAt	Timestamp of last update	false	string

Get Threats - response - macroModules

Name	Description	Required	Value
content	Macro content encoded in UTF-8	false	string
isMacroContentTruncated	Indicates if macro content was truncated	false	boolean
macroDetectionSource	Detection source	false	string
moduleName	Name of macro module	false	string
sha1	SHA-1 of the macro module	false	string
sha256	SHA-256 of the macro module	false	string

Mitigate Threats

POST /web/api/v2.1/threats/mitigate/{action}

Apply a mitigation action to a group of threats that match the filter. Valid values for mitigation: "kill", "quarantine", "remediate", "rollback-remediation", "un-quarantine","network-quarantine".

Your user role must have permissions to mitigate threats - Admin, IR Team, SOC. Only threats which you have permission to mitigate are counted as "affected" in response field.

Rollback is applied only on Windows. Remediate is applied only on macOS and Windows.

Response Messages

200 - Threat successfully mitigated

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Mitigate Threats - response - data table

Mitigate Threats - body - data

Add to Blocklist

POST /web/api/v2.1/threats/add-to-blacklist

Add threats that have a SHA1 hash and that match the filter to the Blocklist of the target scope: Global, Account, Site, or Group. Your role must have permissions to change the Blocklist - Admin, IR Team, SOC - and your user scope access must include the Agent. The target scope is the Group, Site, or Account of the Agent.

Response Messages

200 - Hash threat added to black list

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

query	Full text search for fields: threat_details, content_hash, computer_name, file_path, uuid, detection_agent_version, realtime_agent_version, detection_agent_domain, command_line_arguments, initiated_by_username, storyline, originated_process, k8s_cluster_name, k8s_node_name, k8s_node_labels, k8s_namespace_name, k8s_namespace_labels, k8s_controller_name, k8s_controller_labels, k8s_pod_name, k8s_pod_labels, container_name,	false	string

	container_image_name, container_labels, external_ticket_id		
realtimeAgentVersion__contains	Free-text filter by Agent version at current time (supports multiple values)	false	string []
rebootRequired	A reboot is required on any endpoint for at least one action on the threat	false	boolean
resolved	This is used for backward-compatibility with API 2.0.	false	boolean
signerIdentity__contains	Free-text filter by threat's signer identity (certificate ID) (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storyline__contains	Free-text filter by threat storyline (supports multiple values)	false	string []
storylines	List of Agent context to search for	false	string []
tenant	Indicates a tenant scope request	false	boolean
threatDetails__contains	Free-text filter by threat details(supports multiple values)	false	string []
updatedAt__gt	Updated at greater than.	false	string
updatedAt__gte	Updated at greater or equal than.	false	string
updatedAt__lt	Updated at lesser than.	false	string
updatedAt__lte	Updated at lesser or equal than.	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []

Fetch Threat File

POST /web/api/v2.1/threats/fetch-file

Fetch a file associated with the threat that matches the filter. Your user role must have permissions to Fetch Threat File - Admin, IR Team, SOC.

Response Messages

200 - Number of affected agents

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Fetch Threat File - response - data table
errors	Errors	false	array

Fetch Threat File - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Fetch Threat File - body - data table
filter	Use any of the filtering options to control the list of affected threats. You can use any combination of filters to narrow down the list (For example "apply to only active threats from Linux endpoints"). You can also leave this field empty to apply to all available threats. Note: Filter must match exactly one threat. Bulk operations are not supported.	true	see Fetch Threat File - body - filter table

Fetch Threat File - body - data

Name	Description	Required	Value
password	File encryption password	true	string

Fetch Threat File - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
agentIds	List of Agent IDs	false	string []
agentIsActive	Include Agents currently connected to the Management Console	false	boolean
agentMachineTypes	Include Agent machine types	false	string []
agentMachineTypesNin	Excluded Agent machine types	false	string []
agentTagsData	Filter threats by assigned tags to the related agent. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
agentVersions	Include Agent versions	false	string []
agentVersionsNin	Excluded Agent versions	false	string []
analystVerdicts	Filter threats by a specific analyst verdict	false	string []
analystVerdictsNin	Exclude threats with specific analyst verdicts	false	string []
awsRole__contains	Free-text filter by aws role(supports multiple values)	false	string []
awsSecurityGroups__contains	Free-text filter by aws securityGroups(supports multiple values)	false	string []
awsSubnetIds__contains	Free-text filter by aws subnet ids (supports multiple values)	false	string []

azureResourceGroup__contains	Free-text filter by azure resource group(supports multiple values)	false	string []
classifications	List of threat classifications to search	false	string []
classificationsNin	List of threat classifications not to search	false	string []
classificationSources	Classification sources list	false	string []
classificationSourcesNin	Classification sources list to exclude	false	string []

uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []

Disable Engines

POST /web/api/v2.1/threats/engines/disable

If your list of threats shows too many False Positives, use this command to troubleshoot the Agent Engines that return unexpected results in your deployment. Valid values: "penetration", "dataFiles","exploits", "reputation", "executables", "preExecutionSuspicious", "preExecution", "lateralMovement", and "pup".

Response Messages

200 - Engines disabled

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
------	-------------	----------	-------

data	Response data	false	see Disable Engines - response - data table
errors	Errors	false	array

Disable Engines - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Body Schema

Name	Description	Required	Value
data	Data	false	see Disable Engines - body - data table

Disable Engines - body - data

Name	Description	Required	Value
engines	List of engines	false	string []

Exclusion Options

GET /web/api/v2.1/threats/{threat_id}/whitening-options

Get the Exclusion types that can be created from the detection data.

For example, if a threat is a file with a detected SHA1 hash and pathname, the values of the whiteningOptions in the response are "path" and "file_hash". This command requires the ID of the threat, which you can get from "threats" (see Get Threats). To create an Exclusion, see Exclusions.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Exclusion Options - response - data table
errors	Errors	false	array

Exclusion Options - response - data

Name	Description	Required	Value
threatPolicy	Threat policy	false	string
threatType	Threat type	false	string []
whiteningOptions	Available exclusion options	false	string []

Get Events

GET /web/api/v2.1/threats/{threat_id}/explore/events

Get all threat events.

Parameters

countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
eventid	optional	Filter by a specific process key and its children
eventsubtypes	optional	Filter events by sub-type. Example: "PROCESSCREATION".
eventtypes	optional	Filter events by type. Example: "events".
limit	optional	Limit number of returned items (1-1000). Example: "10".
processname__like	optional	Filter by process name (substring)
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Events - response - pagination table
data	Response data	false	see Get Events - response - data table
errors	Errors	false	array

Get Events - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Events - response - data

Name	Description	Required	Value
agentDomain	Agent domain	true	string
agentGroupId	Agent group id	true	string

srcPort	Src port	false	integer
storyline	Storyline	false	string
taskName	Task name	false	string
taskPath	Task path	false	string
threatStatus	Threat status	false	string
tid	Tid	false	string
trueContext	[DEPRECATED] Use "storyline" instead	false	string
user	User	false	string
verifiedStatus	Verified status	false	string

Add to Exclusions

POST /web/api/v2.1/threats/add-to-exclusions

Add a threat to exclusions. The "whitening option" is required.

When you create an exclusion, you override the "malicious" verdict of the Agent for a detection. This can open holes in your security deployment. Use with caution.

Best practice: Use the most specific definition of the exclusion possible and the lowest mode possible.

BEST PRACTICE

Use the most specific definition of the exclusion possible and the lowest mode possible.

Response Messages

200 - Added to exclusions

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value

Export Threats

GET /web/api/v2.1/threats/export

Export data of threats (as seen in the Console > Incidents) that match the filter. Note: Use the filter. This command exports only 20,000 items (each datum is an item).

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
agentids	optional	List of Agent IDs. Example: "225494730938493804,225494730938493915".
agentisactive	optional	Include Agents currently connected to the Management Console
agentmachinetypes	optional	Include Agent machine types. Example: "unknown".
agentmachinetypesnin	optional	Excluded Agent machine types. Example: "unknown".
agenttagsdata	optional	Filter threats by assigned tags to the related agent. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key. Example: {"key1": ["value1_1", "value1_2"], "key2__nin": ["value2"]}
agentversions	optional	Include Agent versions. Example: "2.5.1.1320".
agentversionsnin	optional	Excluded Agent versions. Example: "2.5.1.1320".
analystverdicts	optional	Filter threats by a specific analyst verdict. Example: "true_positive,suspicious".
analystverdictsnin	optional	Exclude threats with specific analyst verdicts. Example: "true_positive,suspicious".
awsrole__contains	optional	Free-text filter by aws role(supports multiple values)
awssecuritygroups__contains	optional	Free-text filter by aws securityGroups(supports multiple values)
awssubnetids__contains	optional	Free-text filter by aws subnet ids (supports multiple values)
azureresourcegroup__contains	optional	Free-text filter by azure resource group(supports multiple values)

classifications	optional	List of threat classifications to search
classificationsnin	optional	List of threat classifications not to search
classificationsources	optional	Classification sources list. Example: "Cloud".
classificationsourcesnin	optional	Classification sources list to exclude. Example: "Cloud".
cloudaccount__contains	optional	Free-text filter by cloud account (supports multiple values)
cloudimage__contains	optional	Free-text filter by cloud image (supports multiple values)
cloudinstanceid__contains	optional	Free-text filter by cloud instance id(supports multiple values)
cloudinstancesize__contains	optional	Free-text filter by cloud instance size(supports multiple values)
cloudlocation__contains	optional	Free-text filter by cloud location (supports multiple values)
cloudnetwork__contains	optional	Free-text filter by cloud network (supports multiple values)
cloudprovider	optional	Agents from which cloud provider
cloudprovidernin	optional	Exclude Agents from these cloud provider
collectionids	optional	List of collection IDs to search. Example: "225494730938493804,225494730938493915".
commandlinearguments__contains	optional	Free-text filter by threat command line arguments (supports multiple values). Example: "/usr/sbin/,wget".
computername__contains	optional	Free-text filter by computer name (supports multiple values). Example: "john-office,WIN".
confidencelevels	optional	Filter threats by a specific confidence level. Example: "malicious".
confidencelevelsnin	optional	Exclude threats with specific confidence level. Example: "malicious".
containerimagename__contains	optional	Free-text filter by the endpoint container image name (supports multiple values)
containerlabels__contains	optional	Free-text filter by the endpoint container labels (supports multiple values)
containername__contains	optional	Free-text filter by the endpoint container name (supports multiple values)
contenthash__contains	optional	Free-text filter by file content hash (supports multiple values). Example: "5f09bcff3".

contenthashes	optional	List of sha1 hashes to search for. Example: "d,d,d,5,0,3,0,a,3,d,0,2,9,f,3,8,4,5,f,c,1,0,5,2,4,1,9,8,2,9,f,0,8,f,3,1,2,2,4,0".
countsfor	optional	comma-separated list of fields to be shown. Example: "osTypes,machineTypes".
createdat__gt	optional	Created at greater than. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	Created at greater or equal than. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	Created at lesser than. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	Created at lesser or equal than. Example: "2018-02-27T04:49:26.257525Z".
detectionagentdomain__contains	optional	Free-text filter by Agent domain at detection time (supports multiple values). Example: "sentinel,sentinelone.com".
detectionagentversion__contains	optional	Free-text filter by Agent version at detection time (supports multiple values). Example: "1.1.1.1,2.2".
detectionengines	optional	Included engines. Example: "reputation".
detectionenginesnin	optional	Excluded engines. Example: "reputation".
displayname	optional	Display name
engines	optional	Included engines. Example: "reputation".
enginesnin	optional	Excluded engines. Example: "reputation".
externalticketexists	optional	The threat contains ticket number
externalticketid__contains	optional	Free-text filter by the threat external ticket ID (supports multiple values)
externalticketids	optional	External ticket ID for the threat
failedactions	optional	At least one action failed on the threat
filepath__contains	optional	Free-text filter by file path (supports multiple values). Example: "\\MyUser\\Downloads".
gcpserviceaccount__contains	optional	Free-text filter by gcp service account (supports multiple values)
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
hasagenttags	optional	Include only Threats whose Agent is assigned any tags if True, or none if False

ids	optional	List of threat IDs. Example: "225494730938493804,225494730938493915".
incidentstatuses	optional	Filter threats by a specific incident status. Example: "unresolved,in_progress".
incidentstatusesnin	optional	Exclude threats with specific incident statuses. Example: "unresolved,in_progress".
initiatedby	optional	Only include threats from specific initiating sources. Example: "agent_policy,dv_command".
initiatedbynin	optional	Exclude threats with specific initiating sources. Example: "agent_policy,dv_command".
initiatedbyusername__contains	optional	Free-text filter by the username that initiated that threat (supports multiple values). Example: "John,John Doe".
k8sclustername__contains	optional	Free-text filter by the endpoint Kubernetes cluster name (supports multiple values)
k8scontrollerlabels__contains	optional	Free-text filter by the endpoint Kubernetes controller labels (supports multiple values)
k8scontrollername__contains	optional	Free-text filter by the endpoint Kubernetes controller name (supports multiple values)
k8snamespacelabels__contains	optional	Free-text filter by the endpoint Kubernetes namespace labels (supports multiple values)
k8snamespace__contains	optional	Free-text filter by the endpoint Kubernetes namespace name (supports multiple values)
k8snodelabels__contains	optional	Free-text filter by the endpoint Kubernetes node labels (supports multiple values)
k8snodename__contains	optional	Free-text filter by the endpoint Kubernetes node name (supports multiple values)
k8spodlabels__contains	optional	Free-text filter by the endpoint Kubernetes pod labels (supports multiple values)
k8spodname__contains	optional	Free-text filter by the endpoint Kubernetes pod name (supports multiple values)
mitigatedpreemptively	optional	If the threat was detected pre-execution or post-execution
mitigationstatuses	optional	Filter threats by a specific status. Example: "not_mitigated".
mitigationstatusesnin	optional	Filter threats not by a specific status. Example: "not_mitigated".
noteexists	optional	The threat contains at least one note

originatedprocess__contains	optional	Free-text filter by the originated process name of the threat (supports multiple values)
osarchs	optional	Included OS Architectures. Example: "32 bit".
osnames	optional	
osnamesnin	optional	
ostypes	optional	Included OS types. Example: "linux".
ostypesnin	optional	Excluded OS types. Example: "linux".
pendingactions	optional	At least one action is pending for the Agent for the threat
publishername__contains	optional	Free-text filter by threat's publisher name (supports multiple values). Example: "GOOGLE,Apple Inc.".
query	optional	Full text search for fields: threat_details, content_hash, computer_name, file_path, uuid, detection_agent_version, realtime_agent_version, detection_agent_domain, command_line_arguments, initiated_by_username, storyline, originated_process, k8s_cluster_name, k8s_node_name, k8s_node_labels, k8s_namespace_name, k8s_namespace_labels, k8s_controller_name, k8s_controller_labels, k8s_pod_name, k8s_pod_labels, container_name, container_image_name, container_labels, external_ticket_id
realtimeagentversion__contains	optional	Free-text filter by Agent version at current time (supports multiple values). Example: "1.1.1.1,2.2.".
rebootrequired	optional	A reboot is required on any endpoint for at least one action on the threat
resolved	optional	This is used for backward-compatibility with API 2.0.
signeridentity__contains	optional	Free-text filter by threat's signer identity (certificate ID) (supports multiple values). Example: "3BDA323E552DB1FDC0A9DD871E8CADD A2FCBB419".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
storyline__contains	optional	Free-text filter by threat storyline (supports multiple values). Example: "0000C2E97648,0006FC73-77B4-470F-AAC7-".
storylines	optional	List of Agent context to search for
tenant	optional	Indicates a tenant scope request
threatdetails__contains	optional	Free-text filter by threat details(supports multiple values). Example: "malware.exe,virus.exe".

updatedat__gt	optional	Updated at greater than. Example: "2018-02-27T04:49:26.257525Z".
updatedat__gte	optional	Updated at greater or equal than. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lt	optional	Updated at lesser than. Example: "2018-02-27T04:49:26.257525Z".
updatedat__lte	optional	Updated at lesser or equal than. Example: "2018-02-27T04:49:26.257525Z".
uuid__contains	optional	Free-text filter by Agent UUID (supports multiple values). Example: "e92-01928,b055".

Response Messages

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Add to Blocklist (Deep Visibility)

POST /web/api/v2.1/threats/dv-add-to-blacklist

From Deep Visibility results, add a SHA1 hash to the Blocklist. Set the scope of the Blocklist: Global, Account, Site, or Group. The SHA1 and the Agent ID are required (see Deep Visibility > Get Events). Your role must have permissions to change the Blocklist - Admin, IR Team, SOC - and your user scope access must include the scope of the Agent. The target scope is the Group, Site, or Account of the Agent. Deep Visibility requires Complete SKU.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
------	-------------	----------	-------

data	Response data	false	see Add to Blocklist (Deep Visibility) - response - data table
errors	Errors	false	array

Add to Blocklist (Deep Visibility) - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Add to Blocklist (Deep Visibility) - body - data table

Add to Blocklist (Deep Visibility) - body - data

Name	Description	Required	Value
targetScope	Scope of Restrictions to which each hash is added	true	enum
hashes	List of hashes with their source agents	false	see Add to Blocklist (Deep Visibility) - body - hashes table

Add to Blocklist (Deep Visibility) - body - hashes

Name	Description	Required	Value
agentId	Agent that reported the DV event	true	string
hash	Hash to add to Restrictions	false	string

Mark as Threat (Deep Visibility)

POST /web/api/v2.1/threats/dv-mark-as-threat

Mark an event from Deep Visibility data as a threat. (see Deep Visibility > Get Events).Your role must have permissions to Mark as Threat - Admin, IR Team, SOC. The item becomes marked as a threat and the Management adds it to the blocklist. If this threat is detected on an endpoint, the Agent blocks it immediately.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Mark as Threat (Deep Visibility) - response - data table
errors	Errors	false	array

Mark as Threat (Deep Visibility) - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Mark as Threat (Deep Visibility) - body - data table

Mark as Threat (Deep Visibility) - body - data

Name	Description	Required	Value
status	Desired status to mark the events with	true	enum
events	List of DV events with their agents	false	see Mark as Threat (Deep Visibility) - body - events table
initiatedBy	Initiated by	false	enum

Mark as Threat (Deep Visibility) - body - events

Name	Description	Required	Value
storyline	Storyline of the marked event	true	string
agentId	Id if an agent that reported the DV event. Is preceded by agent_uuid.	false	string
agentUuid	Uuid if an agent that reported the DV event. Takes precedence over agent_id.	false	string

Mitigate Alerts

POST /web/api/v2.1/threats/mitigate-alerts

Mark an alerts as a threat and run mitigation action from the Management UI.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Mitigate Alerts - response - data table
errors	Errors	false	array

Mitigate Alerts - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Mitigate Alerts - body - data table

Mitigate Alerts - body - data

Name	Description	Required	Value
action	Mitigation action	false	enum
alerts	List of alerts to mitigate	false	see Mitigate Alerts - body - alerts table

Mitigate Alerts - body - alerts

Name	Description	Required	Value
agentId	Agent ID that reported the alert	true	string
storyline	Storyline of the mitigated alert	true	string

Export Mitigation Report

GET /web/api/v2.1/threats/mitigation-report/{report_id}

Export the mitigation report as a CSV file.

k8sNamespaceName__contains	Free-text filter by the endpoint Kubernetes namespace name (supports multiple values)	false	string []
k8sNodeLabels__contains	Free-text filter by the endpoint Kubernetes node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by the endpoint Kubernetes node name (supports multiple values)	false	string []
k8sPodLabels__contains	Free-text filter by the endpoint Kubernetes pod labels (supports multiple values)	false	string []
k8sPodName__contains	Free-text filter by the endpoint Kubernetes pod name (supports multiple values)	false	string []

limit	Limit	false	integer
mitigatedPreemptively	If the threat was detected pre-execution or post-execution	false	boolean
mitigationStatuses	Filter threats by a specific status	false	string []
mitigationStatusesNin	Filter threats not by a specific status	false	string []
noteExists	The threat contains at least one note	false	boolean
originatedProcess__contains	Free-text filter by the originated process name of the threat (supports multiple values)	false	string []
osArchs	Included OS Architectures	false	string []
osNames		false	string []
osNamesNin		false	string []
osTypes	Included OS types	false	string []
osTypesNin	Excluded OS types	false	string []
pendingActions	At least one action is pending for the Agent for the threat	false	boolean
publisherName__contains	Free-text filter by threat's publisher name (supports multiple values)	false	string []
query	Full text search for fields: threat_details, content_hash, computer_name, file_path, uuid, detection_agent_version, realtime_agent_version, detection_agent_domain, command_line_arguments, initiated_by_username, storyline, originated_process, k8s_cluster_name, k8s_node_name, k8s_node_labels, k8s_namespace_name, k8s_namespace_labels, k8s_controller_name, k8s_controller_labels, k8s_pod_name, k8s_pod_labels, container_name, container_image_name, container_labels, external_ticket_id	false	string
realtimeAgentVersion__contains	Free-text filter by Agent version at current time (supports multiple values)	false	string []
rebootRequired	A reboot is required on any endpoint	false	boolean

	for at least one action on the threat		
resolved	This is used for backward-compatibility with API 2.0.	false	boolean
signerIdentity__contains	Free-text filter by threat's signer identity (certificate ID) (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storyline__contains	Free-text filter by threat storyline (supports multiple values)	false	string []
storylines	List of Agent context to search for	false	string []
tenant	Indicates a tenant scope request	false	boolean
threatDetails__contains	Free-text filter by threat details(supports multiple values)	false	string []
updatedAt__gt	Updated at greater than.	false	string
updatedAt__gte	Updated at greater or equal than.	false	string
updatedAt__lt	Updated at lesser than.	false	string
updatedAt__lte	Updated at lesser or equal than.	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []

Update Threat External Ticket ID

POST /web/api/v2.1/threats/external-ticket-id

Change the external ticket ID of a threat.

Response Messages

200 - Threats external ticket id successfully updated

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
------	-------------	----------	-------

data	Response data	false	see Update Threat External Ticket ID - response - data table
errors	Errors	false	array

Update Threat External Ticket ID - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer

Body Schema

Name	Description	Required	Value
data	Data	true	see Update Threat External Ticket ID - body - data table

noteExists	The threat contains at least one note	false	boolean
originatedProcess__contains	Free-text filter by the originated process name of the threat (supports multiple values)	false	string []
osArchs	Included OS Architectures	false	string []
osNames		false	string []
osNamesNin		false	string []
osTypes	Included OS types	false	string []
osTypesNin	Excluded OS types	false	string []
pendingActions	At least one action is pending for the Agent for the threat	false	boolean
publisherName__contains	Free-text filter by threat's publisher name (supports multiple values)	false	string []
query	Full text search for fields: threat_details, content_hash, computer_name, file_path, uuid, detection_agent_version, realtime_agent_version, detection_agent_domain, command_line_arguments, initiated_by_username, storyline, originated_process, k8s_cluster_name, k8s_node_name, k8s_node_labels, k8s_namespace_name, k8s_namespace_labels, k8s_controller_name, k8s_controller_labels, k8s_pod_name, k8s_pod_labels, container_name, container_image_name, container_labels, external_ticket_id	false	string
realtimeAgentVersion__contains	Free-text filter by Agent version at current time (supports multiple values)	false	string []
rebootRequired	A reboot is required on any endpoint	false	boolean

	for at least one action on the threat		
resolved	This is used for backward-compatibility with API 2.0.	false	boolean
signerIdentity__contains	Free-text filter by threat's signer identity (certificate ID) (supports multiple values)	false	string []
sitelds	List of Site IDs to filter by	false	string []
storyline__contains	Free-text filter by threat storyline (supports multiple values)	false	string []
storylines	List of Agent context to search for	false	string []
tenant	Indicates a tenant scope request	false	boolean
threatDetails__contains	Free-text filter by threat details(supports multiple values)	false	string []
updatedAt__gt	Updated at greater than.	false	string
updatedAt__gte	Updated at greater or equal than.	false	string
updatedAt__lt	Updated at lesser than.	false	string
updatedAt__lte	Updated at lesser or equal than.	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []

Get Quarantined Files

GET /web/api/v2.1/threats/{threat_id}/quarantined-files

Get quarantined files for a single threat by alert ID with pagination.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".

limit	optional	Limit number of returned items (1-1000). Example: "10".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.

Response Messages

200 - List of quarantined files for the threat

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Quarantined Files - response - pagination table
data	Response data	false	see Get Quarantined Files - response - data table
errors	Errors	false	array

Get Quarantined Files - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Quarantined Files - response - data

Name	Description	Required	Value
fileName	Name of the quarantined file	false	string
filePath	Path of the quarantined file	false	string
fileSize	Size of the quarantined file in bytes	false	integer

Delete Quarantined Files

POST /web/api/v2.1/threats/actions/delete-quarantined-files

Delete all quarantined files from selected threats. Sends commands to agents to remove quarantined files for the specified malicious groups.

Response Messages

200 - Delete quarantined files commands created successfully

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
------	-------------	----------	-------

data	Response data	false	see Delete Quarantined Files - response - data table
errors	Errors	false	array

Delete Quarantined Files - response - data

Name	Description	Required	Value
affected	Number of entities affected by the requested operation	false	integer
details	Result details for each threat	false	see Delete Quarantined Files - response - details table

Delete Quarantined Files - response - details

Name	Description	Required	Value
skipped	Skip details if threat was skipped, null if processed successfully	false	see Delete Quarantined Files - response - skipped table
threatId	Threat id	false	string

Delete Quarantined Files - response - skipped

Name	Description	Required	Value
description	Human-readable description	false	string
reason	Reason	false	enum

Body Schema

Name	Description	Required	Value
filter	Use any of the filtering options to control the list of affected threats. You can use any combination of filters to narrow down the list (For example "apply to only active threats from Linux endpoints"). You can also leave this field empty to apply to all available threats.	true	see Delete Quarantined Files - body - filter table
data	Data	false	see Delete Quarantined Files - body - data table

Delete Quarantined Files - body - filter

Name	Description	Required	Value
accountIds	List of Account IDs to filter by	false	string []
agentIds	List of Agent IDs	false	string []
agentsActive	Include Agents currently connected to the Management Console	false	boolean
agentMachineTypes	Include Agent machine types	false	string []
agentMachineTypesNin	Excluded Agent machine types	false	string []
agentTagsData	Filter threats by assigned tags to the related agent. Given in form of a JSON where each key represents a tag key, and each value represents a list of string values to filter by. To filter by unassigned tag values, use __nin suffix in the tag key.	false	string
agentVersions	Include Agent versions	false	string []
agentVersionsNin	Excluded Agent versions	false	string []
analystVerdicts	Filter threats by a specific analyst verdict	false	string []
analystVerdictsNin	Exclude threats with specific analyst verdicts	false	string []
awsRole__contains	Free-text filter by aws role(supports multiple values)	false	string []
awsSecurityGroups__contains	Free-text filter by aws securityGroups(supports multiple values)	false	string []
awsSubnetIds__contains	Free-text filter by aws subnet ids (supports multiple values)	false	string []
azureResourceGroup__contains	Free-text filter by azure resource group(supports multiple values)	false	string []
classifications	List of threat classifications to search	false	string []
classificationsNin	List of threat classifications not to search	false	string []
classificationSources	Classification sources list	false	string []

classificationSourcesNin	Classification sources list to exclude	false	string []
cloudAccount__contains	Free-text filter by cloud account (supports multiple values)	false	string []
cloudImage__contains	Free-text filter by cloud image (supports multiple values)	false	string []
cloudInstanceId__contains	Free-text filter by cloud instance id(supports multiple values)	false	string []
cloudInstanceSize__contains	Free-text filter by cloud instance size(supports multiple values)	false	string []
cloudLocation__contains	Free-text filter by cloud location (supports multiple values)	false	string []
cloudNetwork__contains	Free-text filter by cloud network (supports multiple values)	false	string []
cloudProvider	Agents from which cloud provider	false	string []
cloudProviderNin	Exclude Agents from these cloud provider	false	string []
collectionIds	List of collection IDs to search	false	string []
commandLineArguments__contains	Free-text filter by threat command line arguments (supports multiple values)	false	string []
computerName__contains	Free-text filter by computer name (supports multiple values)	false	string []
confidenceLevels	Filter threats by a specific confidence level	false	string []
confidenceLevelsNin	Exclude threats with specific confidence level	false	string []
containerImageName__contains	Free-text filter by the endpoint container image name (supports multiple values)	false	string []
containerLabels__contains	Free-text filter by the endpoint container labels (supports multiple values)	false	string []
containerName__contains	Free-text filter by the endpoint container name (supports multiple values)	false	string []
contentHash__contains	Free-text filter by file content hash (supports multiple values)	false	string []
contentHashes	List of sha1 hashes to search for	false	string []

countsFor	comma-separated list of fields to be shown	false	string
createdAt__gt	Created at greater than.	false	string
createdAt__gte	Created at greater or equal than.	false	string
createdAt__lt	Created at lesser than.	false	string
createdAt__lte	Created at lesser or equal than.	false	string
detectionAgentDomain__contains	Free-text filter by Agent domain at detection time (supports multiple values)	false	string []
detectionAgentVersion__contains	Free-text filter by Agent version at detection time (supports multiple values)	false	string []
detectionEngines	Included engines	false	string []
detectionEnginesNin	Excluded engines	false	string []
displayName	Display name	false	string
engines	Included engines	false	string []
enginesNin	Excluded engines	false	string []
externalTicketExists	The threat contains ticket number	false	boolean
externalTicketId__contains	Free-text filter by the threat external ticket ID (supports multiple values)	false	string []
externalTicketIds	External ticket ID for the threat	false	string []
failedActions	At least one action failed on the threat	false	boolean
filePath__contains	Free-text filter by file path (supports multiple values)	false	string []
gcpServiceAccount__contains	Free-text filter by gcp service account (supports multiple values)	false	string []
groupIds	List of Group IDs to filter by	false	string []
hasAgentTags	Include only Threats whose Agent is assigned any tags if True, or none if False	false	boolean
ids	List of threat IDs	false	string []
incidentStatuses	Filter threats by a specific incident status	false	string []
incidentStatusesNin	Exclude threats with specific incident statuses	false	string []

initiatedBy	Only include threats from specific initiating sources	false	string []
initiatedByNin	Exclude threats with specific initiating sources	false	string []
initiatedByUsername__contains	Free-text filter by the username that initiated that threat (supports multiple values)	false	string []
k8sClusterName__contains	Free-text filter by the endpoint Kubernetes cluster name (supports multiple values)	false	string []
k8sControllerLabels__contains	Free-text filter by the endpoint Kubernetes controller labels (supports multiple values)	false	string []
k8sControllerName__contains	Free-text filter by the endpoint Kubernetes controller name (supports multiple values)	false	string []
k8sNamespaceLabels__contains	Free-text filter by the endpoint Kubernetes namespace labels (supports multiple values)	false	string []
k8sNamespaceName__contains	Free-text filter by the endpoint Kubernetes namespace name (supports multiple values)	false	string []
k8sNodeLabels__contains	Free-text filter by the endpoint Kubernetes node labels (supports multiple values)	false	string []
k8sNodeName__contains	Free-text filter by the endpoint Kubernetes node name (supports multiple values)	false	string []
k8sPodLabels__contains	Free-text filter by the endpoint Kubernetes pod labels (supports multiple values)	false	string []
k8sPodName__contains	Free-text filter by the endpoint Kubernetes pod name (supports multiple values)	false	string []
limit	Limit	false	integer
mitigatedPreemptively	If the threat was detected pre-execution or post-execution	false	boolean
mitigationStatuses	Filter threats by a specific status	false	string []
mitigationStatusesNin	Filter threats not by a specific status	false	string []

noteExists	The threat contains at least one note	false	boolean
originatedProcess__contains	Free-text filter by the originated process name of the threat (supports multiple values)	false	string []
osArchs	Included OS Architectures	false	string []
osNames		false	string []
osNamesNin		false	string []
osTypes	Included OS types	false	string []
osTypesNin	Excluded OS types	false	string []
pendingActions	At least one action is pending for the Agent for the threat	false	boolean
publisherName__contains	Free-text filter by threat's publisher name (supports multiple values)	false	string []
query	Full text search for fields: threat_details, content_hash, computer_name, file_path, uuid, detection_agent_version, realtime_agent_version, detection_agent_domain, command_line_arguments, initiated_by_username, storyline, originated_process, k8s_cluster_name, k8s_node_name, k8s_node_labels, k8s_namespace_name, k8s_namespace_labels, k8s_controller_name, k8s_controller_labels, k8s_pod_name, k8s_pod_labels, container_name, container_image_name, container_labels, external_ticket_id	false	string
realtimeAgentVersion__contains	Free-text filter by Agent version at current time (supports multiple values)	false	string []
rebootRequired	A reboot is required on any endpoint for at least one action on the threat	false	boolean
resolved	This is used for backward-compatibility with API 2.0.	false	boolean
signerIdentity__contains	Free-text filter by threat's signer identity (certificate ID) (supports multiple values)	false	string []

sitelds	List of Site IDs to filter by	false	string []
storyline__contains	Free-text filter by threat storyline (supports multiple values)	false	string []
storylines	List of Agent context to search for	false	string []
tenant	Indicates a tenant scope request	false	boolean
threatDetails__contains	Free-text filter by threat details(supports multiple values)	false	string []
updatedAt__gt	Updated at greater than.	false	string
updatedAt__gte	Updated at greater or equal than.	false	string
updatedAt__lt	Updated at lesser than.	false	string
updatedAt__lte	Updated at lesser or equal than.	false	string
uuid__contains	Free-text filter by Agent UUID (supports multiple values)	false	string []

Delete Quarantined Files - body - data

Get Threat Timeline

GET /web/api/v2.1/threats/{threat_id}/timeline

Get a threat's timeline.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
activitytypes	optional	Return only these activity codes (comma-separated list). Example: "52,53,71,72".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".

limit	optional	Limit number of returned items (1-1000). Example: "10".
query	optional	Full text search for fields: hash, primary_description, secondary_description
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
pagination	Pagination information	true	see Get Threat Timeline - response - pagination table
data	Response data	false	see Get Threat Timeline - response - data table
errors	Errors	false	array

Get Threat Timeline - response - pagination

Name	Description	Required	Value
totalItems	Total number of items found matching your query	true	integer
nextCursor	Pass this value as "cursor" on your next request, to get the next page of results (Will be "null" when last page reached)	false	string

Get Threat Timeline - response - data

Name	Description	Required	Value
accountId	Related account (If applicable)	false	string
activityType	Activity type	false	integer
agentId	Related Agent (If applicable)	false	string
agentUpdatedVersion	Agent's new version (If applicable)	false	string
createdAt	Activity creation time (UTC)	false	string
data	Extra activity specific data	false	object
groupId	Related group (If applicable)	false	string
hash	Threat file hash (If applicable)	false	string
id	Activity ID	false	string
osFamily	Agent's OS type (if applicable)	false	enum
primaryDescription	Primary description	false	string
secondaryDescription	Secondary description	false	string
siteId	Related site (If applicable)	false	string
threatId	Related threat (If applicable)	false	string
updatedAt	Activity last updated time (UTC)	false	string
userId	The user who invoked the activity (If applicable)	false	string

Export Threat Timeline

GET /web/api/v2.1/export/threats/{threat_id}/timeline

Export a threat's timeline.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
activitytypes	optional	Return only these activity codes (comma-separated list). Example: "52,53,71,72".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
query	optional	Full text search for fields: hash, primary_description, secondary_description
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Export Events

GET /web/api/v2.1/export/threats/{threat_id}/explore/events

Export threat events in CSV or JSON format.

Parameters

format	required	Exported file format. Example: "json".
eventid	optional	Filter by a specific process key and its children
eventsubtypes	optional	Filter events by sub-type. Example: "PROCESSCREATION".
eventtypes	optional	Filter events by type. Example: "events".

processname__like	optional	Filter by process name (substring)
-------------------	----------	------------------------------------

Response Messages

- 200 - Success
- 400 - Invalid user input received. See error details for further information.
- 401 - Unauthorized access - please sign in and retry.

Unprotected Endpoints Discovery

Get Unprotected Endpoints Discovery Table

GET /web/api/v2.1/rogues/table-view

Get the data for each row in the Unprotected Endpoints Discovery Device Inventory Table.
Best practice: Set filters. Each row is a set of parameters that quickly fills the pagination limits.

BEST PRACTICE
Set filters. Each row is a set of parameters that quickly fills the pagination limits.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
devicetype	optional	Device type. Example: "Server/Workstation/...".
devicetypes	optional	Device types
externalip	optional	Search using external IP

externalip__contains	optional	Free-text filter by visible IP (supports multiple values). Example: "192.168.0.1/24,10.1".
firstseen__between	optional	Date range refor first seen(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
firstseen__gt	optional	Devices first seen after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
firstseen__gte	optional	Devices first seen after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
firstseen__lt	optional	Devices first seen before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
firstseen__lte	optional	Devices first seen before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
hostnames	optional	Hostnames
hostnames__contains	optional	Free-text filter by hostanem (supports multiple values). Example: "s1_host,SomeHost".
ids	optional	List of device ids. Example: "225494730938493804,225494730938493915".
lastseen__between	optional	Date range for last seen(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
lastseen__gt	optional	Devices last seen after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastseen__gte	optional	Devices last seen after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastseen__lt	optional	Devices last seen before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastseen__lte	optional	Devices last seen before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
limit	optional	Limit number of returned items (1-1000). Example: "10".
localip	optional	Search using local IP
localip__contains	optional	Free-text filter by IP Address (supports multiple values). Example: "192.168.0.1/24,10.1".

macaddress	optional	A mac address to search for
macaddress__contains	optional	Free-text filter by mac address (supports multiple values). Example: "aa:ee:b1".
manufacturer	optional	Manufacturer of the device or network interface
manufacturer__contains	optional	Free-text filter by manufacturer (supports multiple values). Example: "Company".
osname	optional	Os name
ostype	optional	OS type
ostypes	optional	Included OS types
osversion	optional	Os version
osversion__contains	optional	Free-text filter by OS full name and version (supports multiple values). Example: "Service Pack 1".
query	optional	Query
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
tenant	optional	Indicates a tenant scope request

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Export Unprotected Endpoints Discovery Data

GET /web/api/v2.1/rogues/report/csv

Export Unprotected Endpoints Discovery data to CSV. You can set filters to get only relevant data. The response sends the CSV data as text.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
devicetype	optional	Device type. Example: "Server/Workstation/...".
devicetypes	optional	Device types
externalip	optional	Search using external IP
externalip__contains	optional	Free-text filter by visible IP (supports multiple values). Example: "192.168.0.1/24,10.1".
firstseen__between	optional	Date range refor first seen(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
firstseen__gt	optional	Devices first seen after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
firstseen__gte	optional	Devices first seen after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
firstseen__lt	optional	Devices first seen before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
firstseen__lte	optional	Devices first seen before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
hostnames	optional	Hostnames
hostnames__contains	optional	Free-text filter by hostname (supports multiple values). Example: "s1_host,SomeHost".
ids	optional	List of device ids. Example: "225494730938493804,225494730938493915".
lastseen__between	optional	Date range for last seen(format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
lastseen__gt	optional	Devices last seen after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastseen__gte	optional	Devices last seen after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastseen__lt	optional	Devices last seen before this timestamp. Example:

		"2018-02-27T04:49:26.257525Z".
lastseen__lte	optional	Devices last seen before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
localip	optional	Search using local IP
localip__contains	optional	Free-text filter by IP Address (supports multiple values). Example: "192.168.0.1/24,10.1".
macaddress	optional	A mac address to search for
macaddress__contains	optional	Free-text filter by mac address (supports multiple values). Example: "aa:ee:b1".
manufacturer	optional	Manufacturer of the device or network interface
manufacturer__contains	optional	Free-text filter by manufacturer (supports multiple values). Example: "Company".
osname	optional	Os name
ostype	optional	OS type
ostypes	optional	Included OS types
osversion	optional	Os version
osversion__contains	optional	Free-text filter by OS full name and version (supports multiple values). Example: "Service Pack 1".
query	optional	Query
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
tenant	optional	Indicates a tenant scope request

Get Unprotected Endpoints Discovery Settings

GET /web/api/v2.1/rogues/settings

Unprotected Endpoints Discovery gives full visibility of all unsecured devices connected to your network. Unprotected Endpoints Discovery scans your corporate environment to identify and manage connected devices, even those not protected by or supported by SentinelOne. Unprotected Endpoints Discovery identifies devices as:

* UnSecured - End-user computer or laptop, or server, without a SentinelOne Agent.

When you install Windows Agents with Unprotected Endpoints Discovery, the Agents can become scanners. Selected scanners from networks that you enable for scanning find connected devices with passive and active scan techniques. The scanners send the collected data to Unprotected Endpoints Discovery page on the Management. Unprotected Endpoints Discovery then runs fingerprinting to identify and classify unique devices and to update the Device Inventory Table in the Management Console. With port scanning, it is important that you understand the legal and ethical considerations and that you document an Unprotected Endpoints Discovery plan and implementation. See Legal Considerations and Proper Implementation in the Console Help.

* minAgentsInNetworkToScan - To help you determine which networks are corporate, Unprotected Endpoints Discovery looks at the number of secured endpoints (Agents) in a network. If there are not enough Agents in a network - set by this parameter value - Unprotected Endpoints Discovery considers the network to be non-corporate and will not scan it.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".

Get Latest Packages

GET /web/api/v2.1/update/agent/packages

Get the Agent packages that are uploaded to your Management.
The response shows the data of each package, including the IDs, which you can use in other commands.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
accountname__contains	optional	Free-text filter by account name
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
fileextension	optional	File extension. Example: ".msi".
fileextensions	optional	File extension. Example: ".msi".
filename__contains	optional	Free-text filter by file name
filesize__contains	optional	Free-text filter by file size
ids	optional	Package ID list. Example: "225494730938493804,225494730938493915".
limit	optional	Limit number of returned items (1-1000). Example: "10".
majorversions	optional	Package major versions
minorversion	optional	Package minor version
minorversions	optional	Package minor versions
osarches	optional	Package OS architecture (32/64 bit), applicable to Windows packages only. Example: "64 bit".
osrevision	optional	Agent os revision
ostypes	optional	Os type in. Example: "threat_detection_netapp".
packagetype	optional	Package type. Example: "Agent".
packagetypes	optional	Package type in. Example: "Agent".
platformtype	optional	Platform type. Example: "threat_detection_netapp".
platformtypes	optional	Platform type in. Example: "threat_detection_netapp".
query	optional	A free-text search term, will match applicable attributes
rangerversion	optional	Network Scanner version. Example: "2.5.1.1320".
rangerversion__contains	optional	Free-text filter by Network Scanner version
sha1	optional	Package hash. Example:

		"2fd4e1c67a2d28fced849ee1bb76e7391b93eb12".
sha1__contains	optional	Free-text filter by SHA1 hash
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
sitename__contains	optional	Free-text filter by site name
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
status	optional	Status in. Example: "beta".
version	optional	Agent version. Example: "2.5.1.1320".
versionstr__contains	optional	Free-text filter by version string

errors	Errors	false	array

Deploy System Package - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Download Agent Package

GET /web/api/v2.1/update/agent/download/{package_id}

[DEPRECATED] Download an agent package by package ID. Rate limit: 2 call per minute for each different user token

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

404 - Package not found

Download Package

GET /web/api/v2.1/update/agent/download/{site_id}/{package_id}

Download a package by site_id ("sites") and filename.

Rate limit: 2 call per minute for each user token.

Use this command to manually deploy Agent updates that cannot be deployed with the update-software command (see Agent Actions > Update Software) or through the Console.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

404 - Package not found or bad site

Users

User by token

GET /web/api/v2.1/user

Get a user by token.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
groupids	optional	List of Group IDs to filter by. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
tenant	optional	Indicates a tenant scope request

Response Messages

200 - User retrieved correctly.

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

id	Site ID	true	string
name	Site name	true	string
roleId	ID of the wanted role	false	string
roleName	[DEPRECATED] Name of the role, will work only for predefined roles	false	string
roles	[DEPRECATED] List containing the desired role name in this scope. Use role_id instead.	false	string []

List users

GET /web/api/v2.1/users

Get a list of users.

Parameters

accountids	optional	List of Account IDs to filter by. Example: "225494730938493804,225494730938493915".
apitokenexpiresat__between	optional	Date range for when the API token expires (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
apitokenexpiresat__gt	optional	API token expires after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
apitokenexpiresat__gte	optional	API token expires after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
apitokenexpiresat__lt	optional	API token expires before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
apitokenexpiresat__lte	optional	API token expires before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".

cangenerateapitoken	optional	Can generate api token
countonly	optional	If true, only total number of items will be returned, without any of the actual objects.
createdat__between	optional	Date range for when the user was created (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".
createdat__gt	optional	User was created after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__gte	optional	User was created after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lt	optional	User was created before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
createdat__lte	optional	User was created before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
cursor	optional	Cursor position returned by the last request. Use to iterate over more than 1000 items. Example: "YWdlbnRfaWQ6NTgwMjkzODE=".
datejoined	optional	Date joined. Example: "2018-02-27T04:49:26.257525Z".
email	optional	Email. Example: "admin@sentinelone.com".
email__contains	optional	Match email partially (substring)
emailreadonly	optional	True if email cannot be changed
emailverified	optional	Return only verified/unverified users
firstlogin	optional	First login. Example: "2018-02-27T04:49:26.257525Z".
fullname	optional	Full name
fullname__contains	optional	Match full name partially (substring)
fullnamereadonly	optional	True if full name cannot be changed
groupsreadonly	optional	[DEPRECATED] True if permissions cannot be changed
hasvalidapitoken	optional	Has valid api token
ids	optional	List of user IDs to filter by. Example: "225494730938493804,225494730938493915".
lastactivation__between	optional	Date range for when the user was last active (format: <from_timestamp>-<to_timestamp>, inclusive). Example: "1514978890136-1514978650130".

lastactivation__gt	optional	User was last active after this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastactivation__gte	optional	User was last active after or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastactivation__lt	optional	User was last active before this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastactivation__lte	optional	User was last active before or at this timestamp. Example: "2018-02-27T04:49:26.257525Z".
lastlogin	optional	Last login. Example: "2018-02-27T04:49:26.257525Z".
limit	optional	Limit number of returned items (1-1000). Example: "10".
primarytwofamethod	optional	Primary two fa method
query	optional	Full text search for fields: full_name, email, description
roleids	optional	List of rbac roles to filter by. Example: "225494730938493804,225494730938493915".
siteids	optional	List of Site IDs to filter by. Example: "225494730938493804,225494730938493915".
skip	optional	Skip first number of items (0-1000). To iterate over more than 1000 items, use "cursor". Example: "150".
skipcount	optional	If true, total number of items will not be calculated, which speeds up execution time.
sortby	optional	The column to sort the results by. Example: "id".
sortorder	optional	Sort direction. Example: "asc".
source	optional	User Source. Example: "mgmt".
sources	optional	Source in. Example: "mgmt".
twofaenabled	optional	Two fa enabled
twofastatus	optional	Two fa status
twofastatuses	optional	Two fa status in

Response Messages

200 - List of users retrieved successfully.

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value

Generate iFrame Token

POST /web/api/v2.1/users/generate-iframe-token

Get a new iFrame token with the provided limitations.

Response Messages

200 - User created successfully.

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Not enough permissions to create user.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Generate iFrame Token - response - data table
errors	Errors	false	array

Generate iFrame Token - response - data

Name	Description	Required	Value
iframeToken	User's iframe token	true	string

Body Schema

Name	Description	Required	Value
data	Data	true	see Generate iFrame Token - body - data table

Generate iFrame Token - body - data

Name	Description	Required	Value
accountId	Account id	true	string
agentUids	A list of included UUIDs	false	string []
role	[DEPRECATED]Name of the role	false	string
roleName	RBAC role name	false	string
userName	The username that will be displayed	false	string

Enable 2FA

POST /web/api/v2.1/users/2fa/enable

Enable two-factor authentication for a given user.

Response Messages

200 - 2FA successfully enabled

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - No permission for the action

Response Schema

Name	Description	Required	Value
data	Response data	false	see Enable 2FA - response - data table
errors	Errors	false	array

Enable 2FA - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Body Schema

Name	Description	Required	Value
data	Data	true	see Enable 2FA - body - data table

Enable 2FA - body - data

Name	Description	Required	Value
id	User ID	true	string
currentPassword	Current password	false	string
twoFaCode	Two-Factor Authorization code	false	string

Disable 2FA

POST /web/api/v2.1/users/2fa/disable

Disable Two-Factor Authentication for one user. This requires the ID of the user (run "users").

Response Messages

200 - 2FA successfully disabled

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - No permission for the action

Response Schema

Name	Description	Required	Value
data	Response data	false	see Disable 2FA - response - data table
errors	Errors	false	array

Disable 2FA - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Body Schema

data	Data	true	see Revoke API Token - body - data table

Revoke API Token - body - data

Name	Description	Required	Value
id	User ID	true	string
currentPassword	Current password	false	string
twoFaCode	Two-Factor Authorization code	false	string

API Token by User ID

GET /web/api/v2.1/users/{user_id}/api-token-details

Get the details of the API token generated for a given user.

Response Messages

200 - Success

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

404 - User not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see API Token by User ID - response - data table
errors	Errors	false	array

API Token by User ID - response - data

Name	Description	Required	Value
createdAt	Created at	false	string
expiresAt	Expires at	false	string

API Token Details

POST /web/api/v2.1/users/api-token-details

Get details of the API token that matches the filter.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

Response Schema

Name	Description	Required	Value
data	Response data	false	see API Token Details - response - data table
errors	Errors	false	array

API Token Details - response - data

Name	Description	Required	Value
createdAt	Created at	false	string
expiresAt	Expires at	false	string

Enable 2FA App - body - data

Name	Description	Required	Value
code	Code	false	string
id	Id	false	string

Request 2FA App

POST /web/api/v2.1/users/request-app

Request 2FA App response.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Request 2FA App - response - data table
errors	Errors	false	array

Request 2FA App - response - data

Name	Description	Required	Value
code	Code	false	string
qrCode	Qr code	false	string

Body Schema

Name	Description	Required	Value
currentPassword	User password	false	string

Change Password

POST /web/api/v2.1/users/change-password

Change the user password.

Response Messages

- 200 - Password changed
- 400 - Invalid user input received. See error details for further information.
- 401 - Unauthorized access - please sign in and retry.
- 403 - Insufficient permissions
- 404 - User not found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Change Password - response - data table
errors	Errors	false	array

Change Password - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Body Schema

Name	Description	Required	Value
data	Data	true	see Change Password - body - data table

Change Password - body - data

Name	Description	Required	Value
id	User ID	true	string
confirmNewPassword	Confirm new password	false	string
currentPassword	Current password	false	string
newPassword	New password	false	string
twoFaCode	Two-Factor Authorization code	false	string

Auth Elevate

POST /web/api/v2.1/users/auth/elevate

Elevate a session with a third-party app, such as DUO or Google Authenticator.

Response Messages

200 - Elevated

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Auth Elevate - response - data table
errors	Errors	false	array

Auth Elevate - response - data

Name	Description	Required	Value
duration	Duration	false	integer

data	Data	true	see Auth Elevate - body - data table

Auth Elevate - body - data

Name	Description	Required	Value
code	Code	true	string

Sign EULA

POST /web/api/v2.1/users/auth/eula

Mark the End User License Agreement (EULA) as signed for user scopes.

Response Messages

200 - Authenticated

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Sign EULA - response - data table
errors	Errors	false	array

Sign EULA - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Check Global User

GET /web/api/v2.1/users/tenant-admin-auth-check

See if logged in user is a user with the Global scope of access.

Response Messages

200 - User is Global.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Check Global User - response - data table
errors	Errors	false	array

Check Global User - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Check Remote Shell Permissions

GET /web/api/v2.1/users/rs-auth-check

See if the logged in user is allowed to use Remote Shell.

Response Messages

200 - User is allowed to use remote shell feature.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Check Remote Shell Permissions - response - data table
errors	Errors	false	array

Check Remote Shell Permissions - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Check Viewer

GET /web/api/v2.1/users/viewer-auth-check

See if the logged in user has only viewer permissions.

Response Messages

200 - User is a viewer.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Check Viewer - response - data table
errors	Errors	false	array

Check Viewer - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Email Verification

POST /web/api/v2.1/users/onboarding/verify

When a new user verifies their email, the Management gets a token. Use this command to verify the token and set a new password.

Response Messages

200 - User successfully verified

400 - Invalid user input received. See error details for further information.

401 - Verification failed

404 - A user matching the input verification token wasn't found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Email Verification - response - data table
errors	Errors	false	array

Email Verification - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Body Schema

Name	Description	Required	Value
data	Data	true	see Email Verification - body - data table

Email Verification - body - data

Name	Description	Required	Value
password	User selected password	true	string
token	Verification token	true	string
resetPasswordFlow	Reset password flow	false	boolean

Validate Verification Token

GET /web/api/v2.1/users/onboarding/validate-token

When a new user verifies their email, the Management gets a token. Use this command to validate the token.

Parameters

token	required	Verification token
resetpasswordflow	optional	Reset password flow

Response Messages

200 - Token is valid

400 - Invalid user input received. See error details for further information.

401 - Verification failed

404 - A user matching the input verification token wasn't found

Response Schema

Name	Description	Required	Value
data	Response data	false	see Validate Verification Token - response - data table
errors	Errors	false	array

Validate Verification Token - response - data

Name	Description	Required	Value
success	Indicates a successful operation	false	boolean

Send Verification Email

POST /web/api/v2.1/users/onboarding/send-verification-email

Send verification email to users that match the filter. Warning: Active users will be locked out of the Management Console until they verify (unless set_user_password_methods is on)their email. If your Management Console has Onboarding enabled, when you create a new user, the user gets an email invitation. If the user does not respond in time or loses the email, you can send it again. You can send the email invitation to multiple users. Your SMTP server must be correctly configured in Settings > SMTP for the Global scope. Changing the Global SMTP settings requires an Admin role with Global scope or Support.

Response Messages

200 - Success

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

data	Data	true	see Enroll 2FA - body - data table

Enroll 2FA - body - data

Name	Description	Required	Value
ids	A list of user ids	false	string []

Redirect to SSO

GET /web/api/v2.1/users/login/sso-saml2

If SSO is enabled for a deployment or scope, and a user attempts to log in with name and password, this command redirects the login to SSO.

Parameters

email	optional	Email address of the user trying to log in. Example: "me@sentinelone.com".
scopeid	optional	The scope the desired SSO IdP is configured on. email is irrelevant when using scope_id. If both are provided, email is ignored. Example: "225494730938493804".

Response Messages

302 - Login redirected.

400 - Invalid user input received. See error details for further information.

401 - Not authenticated user.

Redirect to SSO for re-authentication

GET /web/api/v2.1/users/sso-saml2/re-auth

Initiates re-authentication with user's identity provider.

Response Messages

302 - Redirect user to their IDP for re-authentication.

401 - Unauthorized access - please sign in and retry.

403 - User is not allowed to re-authenticate with their IDP

500 - Error in SAML handler initialization.

Auth by SSO

POST /web/api/v2.1/users/login/sso-saml2/{scope_id}

Authenticate a Single Sign-On response over SAML v2 protocol.

Response Messages

302 - SSO authenticated.

401 - Not authenticated user.

404 - Site not found.

Login

POST /web/api/v2.1/users/login

Authenticate a user by username and password and return an authentication token. Rate limit: 1 call per second for each different IP address that communicates with the Console.

Response Messages

200 - User authenticated successfully.

400 - Invalid user input received. See error details for further information.

401 - Login failed. May be the result of bad credentials, or a wrong authentication method if SSO or 2FA is required. A temporary token might be provided to do the required next step. The error code defines the cause and the next step.
Basic error codes:4010010 - authentication failed,4010040 - generic login error.Error codes related to password changes and expiration:4010091 - user must change password - /users/login/set-password,4010092 - password expired - /users/login/set-password,4010093 - password expires soon - /users/login-continue.Error codes related to LDAP (Active Directory):4010050 - generic LDAP error,4010060 - user has no email,4010070 - user is disabled.Error codes related to 2FA:4010035 - 2FA configuration - /users/request-app,4010030 - 2FA required - /users/auth/app,4010031 - 2FA not enrolled,4010032 - 2FA enrollment expired.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Login - response - data table
errors	Errors	false	array

Login - response - data

Name	Description	Required	Value
token	Generated authentication token	true	string
csrf	Generated csrf token	false	string
status	User verification status	false	enum
twoFaMethod	Two-factor authentication method (if enabled)	false	enum

Body Schema

Name	Description	Required	Value
password	Your password	true	string
username	The user email	true	string
rememberMe	User should be remembered across sessions	false	boolean

Logout

POST /web/api/v2.1/users/logout

Log out the authenticated user.

Response Messages

200 - User logged out successfully.

401 - Unauthorized access - please sign in and retry.

Response Schema

Name	Description	Required	Value
data	Response data	false	see Logout - response - data table
errors	Errors	false	array

Logout - response - data

Name	Description	Required	Value
redirectTo	Where the browser should be redirected after the logout	false	string

Login by API Token

POST /web/api/v2.1/users/login/by-api-token

Log in to the API with a token. To learn more about temporary and 6-month tokens and how to generate them, see <https://support.sentinelone.com/hc/en-us/articles/360004195934>.

Response Messages

200 - user logged in

400 - Invalid user input received. See error details for further information.

401 - User authentication failed

Response Schema

Name	Description	Required	Value
data	Response data	false	see Login by API Token - response - data table
errors	Errors	false	array

Login by API Token - response - data

Name	Description	Required	Value
token	User token	true	string
realUser	When logging in from Atlas, specifies the actual user who logged in	false	string
redirectTo	Relative url to redirect to	false	string
redirectToParams	Query params for the redirect to, without '?' prefix	false	string
removedSavedScope	Removed saved scope	false	string

Body Schema

Name	Description	Required	Value
data	Data	false	see Login by API Token - body - data table

Login by API Token - body - data

Name	Description	Required	Value
apiToken	Api token	false	string
reason	When logging in from Atlas, specifies the login reason	false	string

Login by Token

GET /web/api/v2.1/users/login/by-token

Log in with user token.

Parameters

token	required	User token. Example: "bfd9070c1afa88516d3cdfd722e62fe433e42bad6bb14da27088140ad785585f8582adaccd56fb69".
redirectto	optional	Relative url to redirect to
redirecttoparams	optional	Query params for the redirect to, without '?' prefix
removedsavedscope	optional	Removed saved scope

Response Messages

200 - user logged in

400 - Invalid user input received. See error details for further information.

401 - User authentication failed

Continue with login due to upcoming password expiration or SSO 2FA setup

POST /web/api/v2.1/users/login-continue

For SSO 2FA setup tokens, allows users to skip setting up the 2FA and proceed with their login. Accepts a temporary token from SSO login flow with error code 4010035.

For password expiration tokens, allows users to decide if they want to change their soon to expire password now or later.
Users can also choose not to receive the notification again for this password cycle.
Accepts a temporary token from /users/login with error code 4010093.
For users eligible to be onboarded to global identity allows to decide if they want to skip and finish their login

Response Messages

200 - Login can continue

400 - Invalid user input received. See error details for further information.

401 - Unauthorized.
In password expiration flow, a temporary token might be provided to do the required next step. The error code defines the cause and the next step.

Error codes:4010010 - invalid token,4010094 - change password with /users/login/set-password

Response Schema

Name	Description	Required	Value
data	Response data	false	see Continue with login due to upcoming password expiration or SSO 2FA setup - response - data table
errors	Errors	false	array

Continue with login due to upcoming password expiration or SSO 2FA setup - response - data

Name	Description	Required	Value
token	Generated authentication token	true	string
csrf	Generated csrf token	false	string

Body Schema

Name	Description	Required	Value
data	Data	true	see Continue with login due to upcoming password expiration or SSO 2FA setup - body - data table

Continue with login due to upcoming password expiration or SSO 2FA setup - body - data

Name	Description	Required	Value
token	Temporary JWT	true	string
dontShowAgain	Indicates if the user wants to skip the continue next time	false	boolean
resetPassword	Indicates if the user wants to change the password	false	boolean

Set a New Password

POST /web/api/v2.1/users/login/set-password

Sets a new password for the user.

Used by forced password reset and password expiration flows.

Accepts temporary tokens from /users/login with error codes 4010091 and 4010092.

Response Messages

200 - Password was set

400 - Invalid user input received. See error details for further information.

401 - Unauthorized

Response Schema

Name	Description	Required	Value
data	Response data	false	see Set a New Password - response - data table
errors	Errors	false	array

Set a New Password - response - data

Name	Description	Required	Value
token	Generated authentication token	true	string
csrf	Generated csrf token	false	string

Body Schema

Name	Description	Required	Value
data	Data	true	see Set a New Password - body - data table

Set a New Password - body - data

Name	Description	Required	Value
password	The new password	true	string
token	Verification token	true	string

Prompt reset password

POST /web/api/v2.1/users/login/send-reset-password-email

Prompt reset password for users.

Response Messages

200 - Prompt reset password completed

400 - Invalid user input received. See error details for further information.

401 - Unauthorized access - please sign in and retry.

403 - Insufficient permissions

Response Schema

Name	Description	Required	Value
data	Response data	false	see Prompt reset password - response - data table
errors	Errors	false	array

VCS Integration

Fetch filter count

GET /web/api/v2.1/cnapp/vcs/filters/count

Fetch filter count

Parameters

scopeids	required	
scopetype	required	

Response Messages

200 - Filter count fetched successfully

400 - Bad Request

500 - Internal Server Error

Response Schema

Name	Description	Required	Value
data		false	string []

Delete a VCS Integration

GET /web/api/v2.1/cnapp/vcs/integration/{integrationId}/offboarding

This API is used to off-board a VCS integration.

Parameters

scopeids	required	
scopetype	required	

Response Messages

200 - VCS offboarding app url created successfully

400 - Bad Request

500 - Internal Server Error

Response Schema

Name	Description	Required	Value
appUrl		false	string

Disable scanning for repositories in a VCS integration

PUT /web/api/v2.1/cnapp/vcs/integration/{integrationId}/repos/disable-scan

Deactivate scanning for repositories associated with the given VCS integration.

Parameters

scopeids	required	
scopetype	required	

Response Messages

200 - Successfully disabled repositories

400 - Bad Request

500 - Internal Server Error

Response Schema

Name	Description	Required	Value
data		false	object

Body Schema

Name	Description	Required	Value
data		false	see Disable scanning for repositories in a VCS integration - body - data table

Disable scanning for repositories in a VCS integration - body - data

Name	Description	Required	Value
repositoryIds		false	string []

Edit tags for repositories in a VCS integration

PUT /web/api/v2.1/cnapp/vcs/integration/{integrationId}/repos/edit-tags

Allows modification of tags associated with one or more repositories under a specified VCS integration. This operation supports adding, removing, or updating tags to help organize and categorize repositories effectively.

Parameters

scopeids	required	
scopetype	required	

Response Messages

200 - Tags updated successfully

400 - Bad Request

500 - Internal Server Error

Response Schema

Name	Description	Required	Value
data		false	object

Body Schema

Name	Description	Required	Value
data		false	see Edit tags for repositories in a VCS integration - body - data table

Edit tags for repositories in a VCS integration - body - data

Name	Description	Required	Value
action		true	enum
repositoryIds		false	string []
tagIds		false	string []

Enable scanning for repositories in a VCS integration

PUT /web/api/v2.1/cnapp/vcs/integration/{integrationId}/repos/enable-scan

Activates scanning for repositories associated with the given VCS integration.

Parameters

scopeids	required	
scopetype	required	

Response Messages

200 - Successfully enabled repositories

400 - Bad Request

500 - Internal Server Error

Response Schema

Name	Description	Required	Value
data		false	object

Body Schema

Name	Description	Required	Value
data		false	see Enable scanning for repositories in a VCS integration - body - data table

Enable scanning for repositories in a VCS integration - body - data

Name	Description	Required	Value
repositoryIds		false	string []

Fetch repository tags

POST /web/api/v2.1/cnapp/vcs/integration/{integrationId}/repos/get-tags

This endpoint retrieves tags associated with repositories under a VCS integration.

Parameters

scopeIds	required	
scopeType	required	

Response Messages

200 - Repositories tags fetched successfully

400 - Bad Request

500 - Internal Server Error

Response Schema

Name	Description	Required	Value
data		false	undefined []

Body Schema

Name	Description	Required	Value
data		false	see Fetch repository tags - body - data table

Fetch repository tags - body - data

Name	Description	Required	Value
repositoryIds		false	string []

Delete a VCS integration

DELETE /web/api/v2.1/cnapp/vcs/integration/{vcsIntegrationId}

This endpoint permanently deletes a VCS integration.

Parameters

scopeids	required	
scopetype	required	

Response Messages

200 - VCS integration deleted successfully

400 - Bad Request

500 - Internal Server Error

Response Schema

Name	Description	Required	Value
data		false	see Delete a VCS integration - response - data table

Delete a VCS integration - response - data

Name	Description	Required	Value
uninstall		false	boolean

Update a VCS integration

PUT /web/api/v2.1/cnapp/vcs/integration/{vcsIntegrationId}

This endpoint allows users to update configuration details for a VCS integration.

Parameters

scopeids	required	
scopetype	required	

Response Messages

200 - VCS integration updated successfully

400 - Bad Request

500 - Internal Server Error

Response Schema

Name	Description	Required	Value
data		false	object

Body Schema

Name	Description	Required	Value

scanOrgPublicRepositories		true	boolean

List VCS integration repositories

GET /web/api/v2.1/cnapp/vcs/integration/{vcsIntegrationId}/repos

Fetches a list of repositories associated with the VCS integration

Parameters

cursor	optional	
limit	optional	
scopeids	optional	
scopetype	optional	
skip	optional	

Response Messages

200 - Successfully retrieved the list of repositories

400 - Bad Request

500 - Internal Server Error

Response Schema

Name	Description	Required	Value
data		false	see List VCS integration repositories - response - data table

Name	Description	Required	Value
totalItems		true	integer
nextCursor		false	string

Resync VCS Integration Repositories

PUT /web/api/v2.1/cnapp/vcs/integration/{vcsIntegrationId}/repos/resync

Initiates a process to resynchronize repositories associated with the specified VCS integration

Parameters

scopeids	required	
scopetype	required	

Response Messages

200 - Resynchronization initiated successfully

400 - Bad Request

500 - Internal Server Error

Response Schema

Name	Description	Required	Value
data		false	object

List VCS integrations

GET /web/api/v2.1/cnapp/vcs/integrations

Fetches a list of all configured VCS integrations.

Parameters

limit	optional	
scopeids	optional	
scopetype	optional	
skip	optional	

Response Messages

200 - Successfully retrieved the list of VCS integrations

400 - Bad Request

500 - Internal Server Error

Name	Description	Required	Value
id		false	string
type		false	string

Get max allowed priority

GET /web/api/v2.1/cnapp/vcs/scanner-policy/max-allowed-priority

This endpoint returns the maximum allowed value for the priority in scanner policies.

Parameters

scopeids	required	
scopetype	required	
targetscopeid	required	
targetscopetype	required	

Response Messages

200 - Max allowed priority fetched successfully

400 - Bad Request

Response Schema

Name	Description	Required	Value
data		false	see Get max allowed priority - response - data table

Get max allowed priority - response - data

Name	Description	Required	Value
maxAllowedPriority		false	integer

Delete a VCS and CICD scanner policy

DELETE /web/api/v2.1/cnapp/vcs/scanner-policy/{policyId}

This endpoint deletes a scanner policy.

Parameters

scopeids	required	
scopetype	required	

Response Messages

200 - VCS scanner policy deleted successfully

400 - Bad Request

500 - Internal Server Error

Response Schema

Name	Description	Required	Value
data		false	object

Get a VCS and CICD scanner policy

GET /web/api/v2.1/cnapp/vcs/scanner-policy/{policyId}

Get a VCS and CICD scanner policy

Parameters

scopeids	required	
scopetype	required	

Response Messages

200 - This endpoint fetches detailed information for a scanner policy.

400 - Bad Request

500 - Internal Server Error
